ACKNOWLEDGEMENT

Alhamdulillah *RabbilAlamin*, the researcher would like to praise and express her high gratitude to Allah swt., who has been giving the blessing, health, opportunity and inspiration to complete this thesis. In addition, the writer does not forget to express Salam and Salawat to the prophet Muhammad saw., who has guided her and all the Moslems all over the world from the darkness to the lightness.

The researcher realizes that this writing would not finish without helping and the guidance from the other people, so the writer would like to express her deepest thanks to the following people:

1. Prof. Dr. Musafir Pababbari, M.Si. The Rector of Islamic State University of Alauddin Makassar for his advice during the researcher studied at the university.
2. Dr. H. Muhammad Amri, Lc., M.Ag. The Dean of Tarbiyah and Teaching Science Faculty for advice and motivation.
3. Dr. Kamsinah, M.Pd.I., and Sitti Nurpahmi, S.Pd., M.Pd. The Head and the Secretary of English Department of Tarbiyah and Teaching Science Faculty of Alauddin State Islamic University (UIN) Makassar and all of the staffs.
4. The researcher's consultants, Dr. H. Wahyuddin Naro, M.Hum., and Nur Aliyah Nur, S.Pd.I., M.Pd., who have helped, guided, and supported the researcher during the writing of this thesis.
5. Drs. H. Abd. Hafid H, M.A., the headmaster of Madrasah Tsanawiyah Negeri Pangkep who has given permission for the researcher to conduct the study there, the entire teachers especially for Syahira, S.S., S.Pd., M.Pd., as an English teacher, for all the time and the information about the teaching-learning process of English, and also the school administration staff thanks for the cooperation.

6. Beloved parents, H. Abd Haris and Hj. Suhana Azis who always love, pray, motivate and support the researcher for all of their life. The greatest persons in researcher's heart ever.
7. The second year students of Madrasah Tsanawiyah Negeri Pangkep class VIII G and VIII H (academic year 2016-2017) who gave their time to participate in the researcher's research.
8. The special thanks is addressed by the researcher to Muammar Kadhafi, thanks for being researcher's brother, and also to Amriadi, S.Pd., M.Pd., for his guidance and motivation, the researcher's friends in the dormitory Sali, Fiyula El Syarah, Sri Mustika, Tria Nur Rahma, S.Pd., St Mukarrama, Nur Anisah, Nurfatun Mardiah, Nur Hasnah S.KM, A. Tri Reski Amaliah, S.KM., A. Tri Resty Fauziah, S. Farm., St Rahma, Firdayanti, Ulfa Aulianti Anton, Nini Fathriani, and Reski Nur Fauziah as her friends, inspiring persons who always accompany, help, and suggest her. Thank you for this togetherness during 4 years. The researcher cannot find any words to describe how beautiful you are and how much she loves you.
9. The researcher beloved family of English Education Department group 5 and 6 (academic year 2013) who give her much love and motivation.
10. The researcher beloved family of KKN 55 Posko 2 Bontomanurung, Tompobulu district, Maros Regency.

Samata-Gowa, November 2017

The researcher,

Raodhatul Jannah

ABSTRACT

Name : Raodhatul Jannah
Reg. Number : 20400113120
Department/faculty : English Education/ Tarbiyah and Teaching Science
Title : *“The Use of Affixations in Sentence Contexts to Improve the Vocabulary Mastery of the Second Years Students of MTsN Pangkep”*
Consultant I : Dr. H. Wahyuddin Naro, M. Hum.
Consultant II : Nur Aliyah Nur, S.Pd.I., M.Pd.

The objectives of this research are to know whether the use of affixations in sentence contexts is effective to improve the vocabulary mastery and to find out the extent to which the use of affixations in sentence contexts is effective to improve the vocabulary of the second year students of MTsN Pangkep.

This research employed a quasi-experimental method consisted of two groups pre-test and post-test design. There were two variables of this research; the independent variable and the dependent variable. The independent variable was affixation in sentence contexts, and the dependent variable was the students' vocabulary. The population of this research was the second year students of MTsN Pangkep in academic year 2016/2017 which consisted of 195 students. The sample of the research consisted of 39 students which were taken by using purposive sampling technique. There were 18 students from VIII G as the experimental class and 21 students from VIII H as the control class. The instrument of the research was an objective test of vocabulary pertaining to noun formations in sentence contexts. Instrument test was used in pre-test and post-test.

The result of the data indicated that there was a significant difference between students' post-test in experimental class and control class. The mean score of post test (55,56) in experimental class. It was classified as fair and the mean score of post-test (40,00) in control class. It was classified as poor. The table distribution the value of t-test and t-table in post test showed column equal variances assumed and line of Levene's test for equality variances. It was obtained $f=0,839$ with its sig.rate or p-value = $0,366 > 0,05$ which means

that the variant of population to both of group was similar or homogeneous. It was provided homogeneous, so it opted for column equal vaiances assumed and t-test for equality means. It was shown the rate of $t = 3,24$, $df = 34$, and sig. (2 tailed) or p-value = $0,02 < 0,05$ or H_0

was rejected. Therefore, the provided hypothesis by data was literally tested. So, the researcher concluded teaching vocabulary through affixation in sentence contexts is effective to improve the students' vocabulary mastery. Teaching vocabulary through this method can build up the students vocabulary in three aspects, those are word meaning, word forms, and word use/function and also in teaching vocabulary, affixation in sentence contexts is one of the alternative strategy which can help the teacher in teaching and learning process.

CHAPTER I

INTRODUCTION

This chapter deals with background, research problem, research objectives, research significance, research scope, and operational definition of terms.

A. Background

English is taught from the elementary school to the university. The main purpose of the subject is to make students able to communicate and express their ideas in English and to have comprehension in reading English textbook and write information in English.

Reading, speaking, writing and listening are the four skills which must be taught in foreign language classes and the four of aspects of foreign language, vocabulary is considered as the most significant factor. As Curtis and Longo (2001:2) providing vocabulary instruction is one of the most significant ways in which teachers can improve students' reading listening comprehension. Also Wilkins (1987) states that language learners would accept that vocabulary would be initially less important than grammar while without grammar very little can be conveyed, without vocabulary nothing can be conveyed.

What to read, what to speak, what to write, and what to listen are words, and all words of language are termed as vocabulary. Grammar, in the other hand, is also important particularly in writing and reading. In speaking and listening, however, where people usually speak as well as listen to single words, grammar does not play

any role, but vocabulary does. Therefore, language learners always have to improve their mastery on vocabulary to achieve the four language skills.p

Learning vocabulary does not mean merely learning of a word or words. Particularly for learners of English, learning vocabulary should be directed to the learning of such things (in addition to the learning of meaning) as word forms, word use, and word grammar.

One way of learning to improve the vocabulary mastery, particularly the word's meaning, is by learning through affixation. It is a way of building up words through a morphological process whereby grammatical or lexical information is added to a stem. In practice, affixation is the act of affixing (either prefixing or suffixing) a bound morpheme to a root word or a stem to derive a new word.

Affixation seems to be potential for improving a large amount of vocabulary. The great advantage is that each affix (a prefix or suffix) expresses a recognizable meaning, so it is usually easy to work out the meaning of a word built in this way. It is to say that once the root word is known, all of the beginnings or endings which are relevant can be added to modify the word's meaning, and if necessary to change it from one part of speech to another.

Building up the vocabulary command through affixation can be done either in individual words or in sentence contexts. One root word may take different more than one affix. Let's take the root *ready*, which can take either *-ly* or *-ness* (*readiness*). In individual-word affixation, the affixation is formed by directly and merely attaching a prefix or a suffix to a root word/stem without thinking of the

reason why the suffix, i.e. -ly in *readily* is used, not the suffix -ness to derive *readiness*. In sentence contexts, by contrast, the reason of using a particular affix is clear. The suffix, for example, -ly is used because the sentence context requires the change from the adjective *ready* to an adverb *readily*; or it requires the change from the adjective *ready* to a noun *readiness*. So, affixation in individual words may build up our vocabulary in meaning only, but it may loss us the word use, while affixation in sentence contexts may build up our vocabulary in the three aspects to learn: word meaning, word forms, and word use/function.

Not all words can be affixed (prefixed or suffixed), but in fact, a great number of words may take affixation to change not only their meanings but also their forms and functions. So, hopefully, affixation is assumed to be effective when it is made use as a technique of presenting vocabulary materials to our students. Then, the existence of this research is meant as an attempt to see whether or not affixation is really effective for vocabulary building.

B. Research Problem

The problem of this research is formulated as in the following questions:

1. Is the use of affixations in sentence contexts effective in improving vocabulary mastery of the second year students of MTsN Pangkep?
2. To what extent is the use of affixation in sentence context is effective in improving vocabulary mastery of the second year students of MTsN Pangkep?

C. Research Objectives

The objectives of this research are:

1. To know whether or not the use of affixations in sentence contexts is effective in improving the vocabulary mastery of the second year students of MTsN Pangkep.
2. To find out the extent to which the use of affixations in sentence contexts effective in improving vocabulary mastery of the second year students of MTsN Pangkep

D. Research Significance

The significance of this study can be seen from theoretically and practically.

1. Theoretically

The theoretical significance of this research is to give more knowledge for the teacher about one of easy ways to improve students' vocabulary.

2. Practically

This research will be beneficial for the students especially in MTsN Pangkep to help them in learning and knowing more vocabulary. And it can become a guidance for the teacher in teaching vocabulary, that is through affixation in sentence contexts. The result of this research is also expected to be a helpful contribution for further researchers who are interested in teaching and learning process.

E. Research Scope

The research is under applied linguistics, which focused on the use of affixation in sentence contexts in improving the vocabulary mastery of the second year students of MTsN Pangkep. The affixation is limited to the use of derivational suffixes that are used to change the parts of speech from verbs to nouns and from adjective to nouns. The students' activity is to form nouns based on the given verbs and adjectives in sentence contexts.

F. Operational Definition of Terms

To avoid misunderstanding about the terms that are used in this reseach, the writer gives some explanations as follows:

1. Affixation

Sukirman (2013: 61) states that affix is bound morpheme which cannot stand alone as a word; it should be attached to a free morpheme. The *-ly*, for instance, is a bound morpheme as well as an affix. In addition, all afixes cannot occur as a word. If they occur by themselves, they will be meaningless. Therefore, linguistics use the term affix to describe where exactly a bound morphems is attached. It can be concluded that affixation is the process of adding a morpheme (or affix) to a word to create either (a) a different form of that word (e.g., *bird* → *birds*), or (b) a new word with a different meaning (*bird* → *birder*). Affixation is the most common way of making a new word in English.

The two primary kinds of affixation are prefixation (the addition of a prefix) and suffixation (the addition of a suffix).

2. Vocabulary Mastery

Coady and Huckin (1997: 5) says vocabulary mastery is central to language and critical importance to the typical language learner. The researcher concluded that vocabulary mastery is a fundamental requirement that influences students' achievement in studying English. Without vocabulary mastery, there is not communication, reading, and writing can be conveyed. So that, it is important to know what the vocabulary is.

3. Sentence

Rizkayadi (2014: 3) states sentence is a series of words structured as a subject and predicate which has meaning and ended with point. It can be concluded that sentence is a group of words that are put together to mean something. A sentence is the basic unit of language which expresses a complete thought. It does this by following the grammatical rules of syntax.

A complete sentence has at least a subject and a main verb to state (declare) a complete thought. Short example: *Walker walks*. A subject is the noun that is doing the main verb. The main verb is the verb that the subject is doing. In English and many other languages, the first word of a written sentence has a capital letter. At the end of the sentence there is a full stop or full point.

4. Improve

Hornby (1995: 222) states improve is become or make something better. It can be concluded that improve is act of enhancing or making better in terms of quality, value or usefulness. This can be by working ideas, objects or process more desirable

by adding or removing components. The term can be also by applied to people as well, via methods such a performance reviews which are meant to try and improve an employee in some manner.

CHAPTER II

REVIEW OF RELATED LITERATURE

This chapter deals with four sections. Those are some previous research findings, some pertinent ideas, theoretical framework, and research hypothesis.

A. *Some Previous Research Findings*

As being basic to communication, vocabulary has made many researchers explore and expose the implementation of various techniques in language teaching. The following are some researchers who have made experiments on the teaching of vocabulary. As Ansar (2001) reported that the use of sliding boards could improve the vocabulary mastery of the second year students of SLTP Negeri 4 Alla Enrekang.

Huldiana (2001) found the use of situational pictures could increase the vocabulary command of the first year students of SLTP Negeri 27 Makassar..

Patiung (2001) concluded the use of *questioning technique* could motivate the first year students of SLTP Negeri 8 Makassar to master English Vocabulary.

Jaenal (2002) concluded the implementation of reading short stories could improve the vocabulary of the second grade of SMP Khadijah Makassar.

The research findings stated above indicate the vocabulary command of the students can basically be improved through a number of teaching techniques. This does not mean, however, that the act of finding another or other teaching techniques is not needed anymore. Instead, teaching techniques for vocabulary improvement must always be manipulated for the two reasons. First, the ngs stated above are the results of experiments conducted at different schools. This means that they take

different samples as respondents. The writer believes that one teaching technique may be good for certain group of respondents but it may be not good for another or other groups of respondents. Second, the researcher believes very much that monotonous teaching technique used by the teacher in classroom will lead the students to boredom. Therefore, the acts of finding new techniques are absolutely needed to avoid boredom for students when they are taught through a kind of teaching techniques monotonously.

B. Some Pertinent Ideas

1. Definition of Vocabulary

There are some definitions of vocabulary pointed out by some experts, as given below:

- a. Webster (1989: 2046) states vocabulary is (a) a list of words and sometimes phrases, usually arranged in alphabetical order and defined a dictionary, glossary or lexicon (b) all the words of language (c) all the words used by a particular person, class, profession, etc. Sometimes, all the words recognized and understood by a particular person, although not necessarily used by him.
- b. Good (1959: 642) states vocabulary is (a) the content and function words of a language which are learned so thoroughly that they become a part of a child's understanding of spelling and later of reading and writing; (b) the words having meaning when heard or seen even though not produced by individual himself.

- c. Vocabulary is (a) total number of words that make up a language; (b) body of words known to a person or used in a particular book, subject; (c) lists of words with their meanings” Hornby (1989: 1425).
- d. Urdang and Flexner (1968: 1473) stated that vocabulary is the stock of words used by or known to a particular person or group of person.

The definition before is clearly understood that vocabulary is a word or words, but not all words are vocabulary. There are at least two criteria for a word to be termed as vocabulary. First, the word must have meaning; any word without meaning is not a vocabulary. Second, the word is known to a person; any word unknown to a person cannot be termed as a vocabulary.

The two criteria above implicitly reveal that all words listed in dictionary are termed as vocabulary because they have meanings and are known to a person particularly to the lexicographer of that dictionary. The writer then gets an understanding that vocabulary is any word of a language, by their content words or function words, which have meanings and are known to a person.

According to the writer, vocabulary should be defined in relation to language learning. In the case of language learning, coming up such terms *to learn* vocabulary and *to improve* vocabulary. To learn vocabulary means to learn the unknown words. So, the term vocabulary here refers to words unknown to the learners. Meanwhile, to improve the vocabulary means to make greater the number of known words. In this case, the term vocabulary refers to word already known to that learner. The conclusion is that only the unknown words are learnt and that only the known words

are improve in number. Then, vocabulary can be defined as the words of a language known or unknown to language learners.

The Classification of Vocabulary

Some experts have given different classification of vocabulary. Harmer (1991: 159) classifies vocabulary into two kinds: active vocabulary and passive vocabulary. Passive vocabulary refers to all words the students have learnt and which are able to be used in communication. Passive vocabulary, in the other hand, refers to all words which students will recognize when the students see them but which they will probably not be able to use them in communication.

Schail in Rita (1994: 9) classifies vocabulary into three categories: active vocabulary, reserve vocabulary, and passive vocabulary. Active vocabulary is the words that customarily used in speaking. Reserve vocabulary is the words that known but rarely uttered in speaking but usually used in writing. Passive vocabulary is a word that recognized vaguely and has a disguise meaning. It never used in either speaking or writing; it is just known because having seen it before.

Johnson and Pearson (1978) in Irmayanti (2008: 8) classify vocabulary into two main kind namely receptive vocabulary and productive vocabulary. Receptive vocabulary is those words that are used in listening and reading. Productive vocabulary is words used in speaking and writing.

Wallace (1989: 30) classifies vocabulary into four kinds based on the four kinds of language skills, namely *understanding vocabulary*, *speaking vocabulary*, *writing vocabulary*, and *potential vocabulary*. Understanding vocabulary refers to the

words that can be recognized and comprehend through listening and reading. Speaking vocabulary refers to the words used orally in informal and formal ways. Writing vocabulary refers to the words used in written forms in both in informal and formal ways. Potential vocabulary refers to the words which could be interpreted from context and analytical of words form (prefixes, suffixes, roots).

The classification of vocabulary that described above seems to be based on the ability of a person to use the words in communication and on the ways the words are used. Words are termed as active vocabulary when they are able to be used, and they are termed as passive vocabulary when they are not able to be used, or when they are rarely used. Again, terming the words as active vocabulary only if it is customarily used in speaking, and terming as reserve vocabulary when it is used only in writing.

Based on the classifications above, it is also comprehended that some words are frequently used, some other are rarely used, and still other are never used by a particular person in daily communication. The frequency of using a particular word depends, of course, on the profession of the word user. For example, a politician frequently uses words related to politics but he probably rarely uses words related to health. On the contrary, a physician frequently uses words related to health but rarely uses words related to politics. So, words related to politics become active vocabulary or productive as well as receptive vocabulary for politicians but may be passive vocabulary for physician. Contrarily, words related to health become active vocabulary for physicians but passive vocabulary for politicians.

2. The Aspect of Vocabulary

Harmer (1991: 156-157) explains four aspects of vocabulary the students need to know. The four aspects are word meaning, word use, word formation, and word grammar.

a. Word meaning

One word may have more than one meaning depending on the context in which that words occurs. In the teaching of vocabulary, therefore, words presented to students should be in a variety of contexts to show various meanings.

b. Word use

In learning vocabulary, the students need to know how a word is used. They need to know, for example, collocation. For examples, such a word as *wrist* can collocate with *sprain* as in *sprain wrist*, but it cannot collocate with the word *head*. So we cannot have such a collocation as *sprain head*. On the contrary, the word *ache* can collocate with *head* as in *headache*, but it cannot collocate with the word *wrist*. So, we cannot have such a collocation as *wristache*.

c. Word formation

Word formation refers to word forms and how they are formed. Some words are nouns, some words are adjectives, some words are verbs, etc. Some nouns are countable and some others are uncountable. Some nouns are singular and some others are plural. The students need to know how to form adjectives from nouns, how to formn nouns from adjectives, how to form verb from nouns or from adjectives, and so forth.

d. Word grammar

Word grammar refers to such things as the way words are used grammatically. In English, for instance, some verbs are used with *to* (*want to*, *walk to*, *speak to*); but some other verbs are used without *to* (*tell*, *can*, *must*, etc.) English verbs have tenses. Such verbs as *want* may change to *wanted*, *walk* may change *walked*, *speak* may change to *spoke*. The students need to know when, for example, *want* or *wanted* is used. In addition, the students also need to know how to form plural nouns, and when they are used.

3. The Concept of Affixation

The morphological process whereby grammatical or lexical information is added to a stem is known as affixation; prefixation, suffixation, infixation (Crystal, 1985: 10). It is basically the act of affixing (either prefixing or suffixing) a bound morpheme (a prefix or a suffix) to a root word or a stem to derive a new word. In other words, affixation is a morphological process of formation by adding or attaching in a particular way an affix (either prefix or suffix) to a root word/stem to change the meaning of the root word/stem, and if necessary to change the part of speech from one to another.

In some languages, affixation can be in three types, depending on the position of the affix with reference to the root or stem of the word. The three common types are prefixation, infixation, and suffixation. In English, however, the only affixations to be found are prefixation and suffixation, while infixation never occurs (Crystal, 1985: 10). Each of the two affixations in English is described below.

- a. Prefixa
- b. tion

In affixation, it is attached as affixes to a root words/stem to derive new words. Affixes in English are classified into two types. Those which are added to the beginning of a root/stem are known as prefixes, and those which are attached to the end of a root/stem are known as suffixes. So prefixation is basically the affixation performed by attaching/adding a bound morpheme to a root or stem. The bound morphemes used in this way are known as *prefixes*.

In prefixation, prefixes change the meaning of the words to which they are added. English has a great variety of prefixes, expressing a wide range of modification to the root words to which they are attached. Garner (2002: 147) states four general issues about prefixes. First, there are some prefixes which can be added to virtually any relevant word. Secondly, by contrast, a number of prefixes have essentially the same meaning, but we use different ones with different roots words. Thirdly, there are many words in which the prefix can be easily organized, but there seems to be no real root word. Fourthly, many root words can take different prefixes which modify the root word similar, but no identical way.

Some prefixes are potential to be added to almost any root, and others are added to particular words only. Some examples of prefixes that can be added to almost any root are:

<u>Prefixes</u>	<u>Meaning</u>	<u>Root</u>	<u>Example</u>

		war	interwar
		governmental	intergovernmental
ex-	Former	wife	ex-wife
		president	ex-president
		minister	ex-minister
co-	Together	supervisor	co-supervisor
		contributor	co-contributor
		worker	co-worker

Some different prefixes have the same meanings. The commonest examples of these are those prefixes which create opposites or antonyms. There is a wide variety of such suffixes, each of which is used with only certain root word. The most common prefix that makes is *un-* which is usually used with adjectives and adverbs, as in *uninteresting, unlikely, unmistakable, unhelpful, ungrammatical, untrue, unclear, unfair, uncommon, unfamiliar, etc.* To make an opposite, the prefix *un-* is most often added to past participle of a verb as in *unspoken, unplanned, uneaten, untried, etc.* (Garner, 2004: 149).

The prefix *in* is quite widely used to make antonyms of adjectives, adverbs, and nouns. It is a little difficult for two reasons. First, it changes into a different form depending on the first sound of the root, for example:

sincere *insincere*

possible *impossible*

regular *irregular*

legal *illegal*

Secondly, *in-* and its various forms are also used in some cases to add meanings other than the opposite. For example, *in-* in the following words has the meaning of *inwards*.

Infill, implode, irrupt

The picture is made more complicated by the fact that some adjectives (and adverbs derived from them) make their antonyms with *un-* but their associated nouns make antonyms with *in-*

Adjective	Noun
Unjust	Injustice
Unable	Inability

Inflectional prefixesDerivational Prefixes*Nouns* → *Nouns*

Ability	in-	Inability
War	post-	post-war
abortion	anti-	anti-abortion
government	pro-	pro-government
wife	ex-	ex-wife
supervisor	co-	co-supervisor

Nouns → *Verbs*

Case	en-	Encase
danger	em-	endanger
plane		emplane

Verbs → *Verbs*

Red	re-	Reread
do	over	overdo
emphasize	under	underemphasize
arrange	pre-	pre-arranged

Adjectives → *Verbs*

Large		enlarge
rich		enrich
able		enable
sure		ensure

Adjective → *Adjective*

Legal	il-	Illegal
possible	im-	impossible
regular	ir-	irregular
able	un-	unable

Because of this rather confusing situation with antonyms, there is a tendency to use non- (retaining the hyphen in the spelling) for this purpose, as in non-regular, non-comprehensible. The difficulty with this apparently sensible solution is that non-

does not always make the opposite meaning, but simply adds a negative or excluding meaning, as in non-European, non-legal, etc.

Some prefixes are inflectional and others are derivational. Inflectional prefixes are those that do not change the part of speech of the words to which they are attached. By contrast, derivational prefixes are those that change the part of speech of the words to which they are attached.

Based on the previous examples, it states that inflectional prefixes are those that function to make antonyms. The derivational prefixes, on the other hand, are used to make verbs from nouns and adjectives.

c. Suffixation

Suffixation is the affixation performed by attaching/adding a bound morpheme to the end of a root word/stem. The bound morphemes used in this way are known as *suffixes*.

Several suffixes are grammatical endings, and do not change the part of speech of the root of word. They are called inflectional suffixes, which include *-s* for making nouns plural and showing verb tense; *'s /-s* for making possession; *--ed* for showing verb tense; *-ing* for showing progressiveness; and *-er* and *-est* for the comparative and superlative of adjectives.

<u>Inflectional Suffixes</u>	<u>Functions</u>	<u>Examples</u>
	- making noun plural	five books
-s	- showing subject-verb agreement in simple present tense	The sun <u>rises</u> in the east.
- 's/-s'	Making possession	Ali's book; the students' books
-ed	Showing verb tense	Walked, wanted, invited
-ing	Showing progressiveness	She is sitting.
-er	Showing the comparative of adjectives	cleverer, wider, larger
-est	Showing the superlative of adjectives	cleverest, widest, largest

Other suffixes change a word from a part of speech to another. They are known as *derivational suffixes*. Examples of derivational suffixes and their function are as follows:

1) Suffixes that change nouns to verbs:

<u>Nouns</u>	<u>Verbs</u>	<u>Suffixes</u>
Length	Lengthen	-en
Memory	Memorize	-ize

Beauty	Beautify	-(i)fy
Breath	Breathe	-e

2) Suffixes that change nouns to adjectives

<u>Nouns</u>	<u>Adjective</u>	<u>Suffixes</u>
Child	Childish	-ish
Self	Selfish	
Cloud	Cloudy	-y
Wealth	Wealthy	
Person	Personal	-al
Accident	Accidental	
Friend	Friendly	-ly
Month	Monthly	
Danger	Dangerous	-ous
Mystery	Mysterious	
Moment	Momentary	-ary
Custom	Customary	
Child	Childlike	-like
Man	Manlike	
History	Historic	-ic
Artist	Artistic	
Power	Powerless	-less

Home	Homeless	
Power	Powerful	-ful
Success	Successful	

3) Suffixes that change verbs to adjectives

<u>Verbs</u>	<u>Adjective</u>	<u>Suffixes</u>
Create	Creative	-ive
attract	attractive	
excel	excellent	-ent
confide	confident	
please	pleasant	-ant
complain	complainant	
pay	payable	-able
work	workable	
run	running	-ing
fight	fighting	

4) Suffixes that change verbs to nouns

<u>Verbs</u>	<u>Nouns</u>	<u>Suffixes</u>
Break	Breakage	-age
Link	Linkage	
Arrive	Arrival	-al

Approve	Approval	
Accept	Acceptance	-ance/-ence
Exist	Existence	
Serve	Servant	-ant
Attend	Attendant	
Consider	Consideration	-ation/-tion/-sion
Relate	Relation	
Revise	Revision	
Examine	Examinee	-ee
Employ	Employee	
Boil	Boiler	-er/-or/-ar
Advise	Advisor	
Beg	Beggar	
Agree	Agreement	-ment
Commit	Commitment	
Depart	Departure	-ure
Press	Pressure	
Army	Army	-y
Deliver	Delivery	
Read	Reading	-ing
Understand	Understanding	

5) Suffixes that change adjectives to nouns

<u>Adjective</u>	<u>Nouns</u>	<u>Suffixes</u>
Abundant	Abundance	-ce
Convenient	Convenience	
Consistent	Consistency	-cy
Accurate	Accuracy	
Colonial	Colonialism	-ism
Human	Humanism	
Active	Activity	-ity
Fertile	Fertility	
Happy	Happiness	-ness
Ill	Illness	
Young	Youngster	-ster
Old	Oldster	
Young	Youth	-th
Long	Length	

6) Suffixes that change adjectives to verbs

<u>Adjectives</u>	<u>Verbs</u>	<u>Suffixes</u>
Legal	Legalize	-ize
Familiar	Familiarize	
Black	Blacken	-en
Deep	Deepen	

A. Theoretical Framework

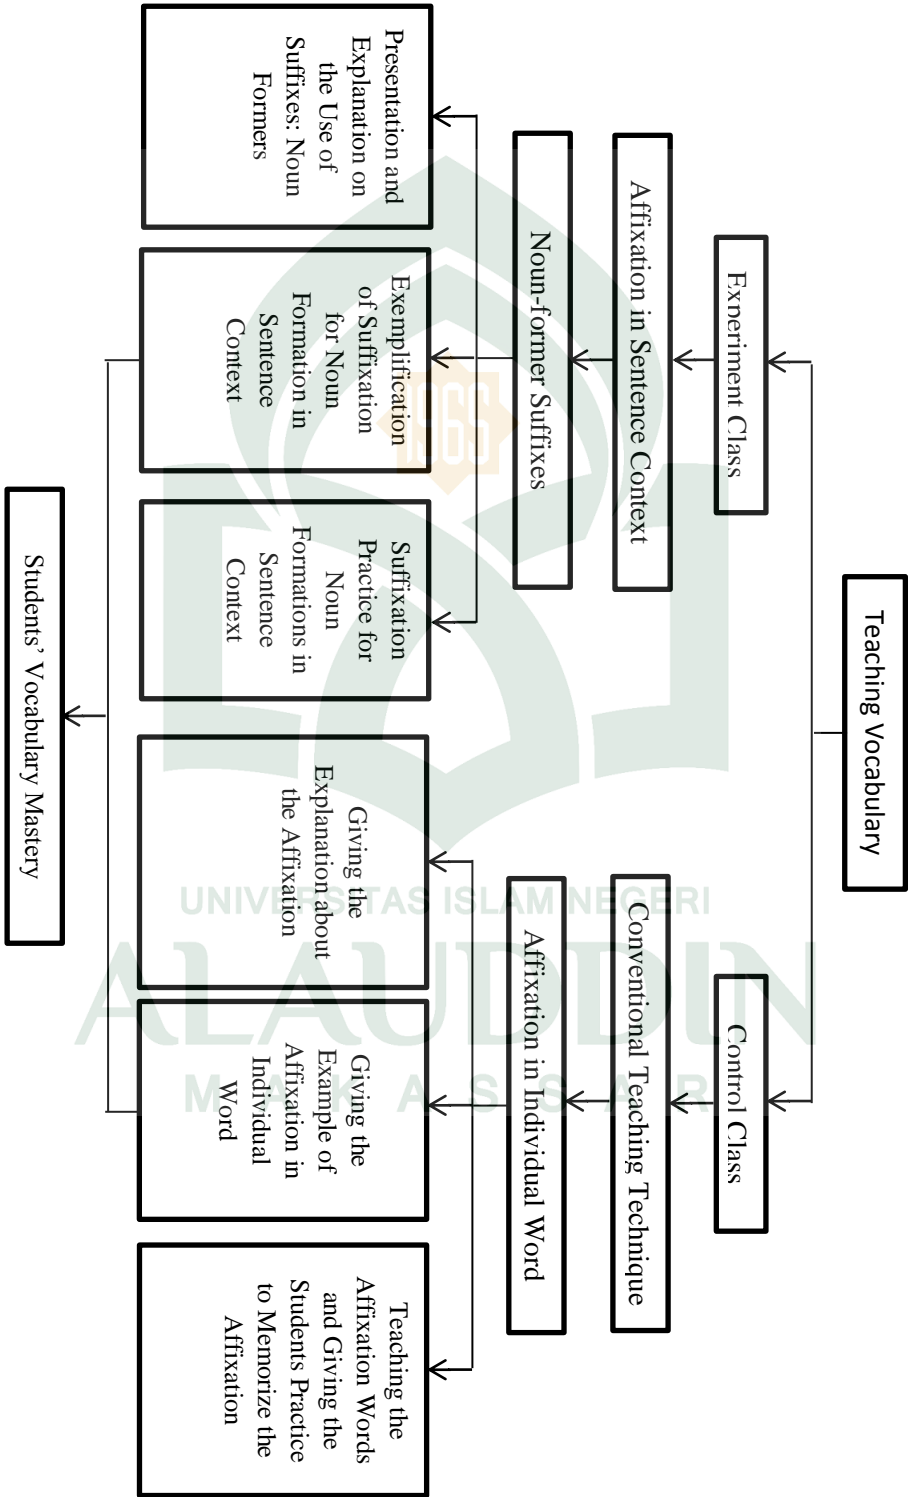

Figure 2.1 The Theoretical Framework

The diagram 2.1 indicates the research found out the effectiveness of using affixations in sentence contexts in improving the vocabulary mastery. There were two samples in this research. They were experimental class and control class. In the experimental class the researcher applied affixations in sentence contexts in teaching vocabulary with noun former teaching technique by the following steps: (1) introducing and explaining the use of suffixes to be used, (2) giving examples of affixations in sentence contexts, and (3) getting the students to practice suffixations for noun and adjective formations in sentence contexts. From these procedure, the students were expected to get improvement in Vocabulary mastery in terms of (1) word meaning, (2) word formation, and (3) word grammar. While in control class the researcher taught vocabulary with conventional teaching method that was through affixations in individual word. After the treatment, the researcher will look at the students' vocabulary mastery improvement.

C. Research Hypothesis

The hypothesis of this research are proposed in terms of null hypotheses (H₀) and the alternative hypotheses (H₁). They are followed:

1. H₀: The use of affixations in sentence contexts is not effective in improving the students' vocabulary mastery.
2. H₁: The use of affixations in sentence contexts effective in improving the students' vocabulary mastery.

CHAPTER III

RESEARCH METHOD

This chapter deals with five sections. Those are research method, population and sample, research instrument, data collection procedure, and data analysis technique.

A. *Research Method*

This chapter, the researcher explained the research method that was used of this study. It consists of research design and research variable.

1. Research Design

The design of the research is quasi-experimental design (the pre-test – post-test nonequivalent group design. In quasi experiment, the researcher does not have an opportunity for random assignment of subjects because the subjects are already intact (Schreiber & Asner-self, 2011: 14). The researcher is attempting to do determining if a cause-effect relationship exists between one factor or set of factors -the independents variable(s)- and a second factor or set of factors –the dependent variable(s)- and decides whether one instructional method is better that the other method. The design is illustrated in the following table:

E	<u>O₁</u>	<u>X</u>	<u>O₂</u>
C	O ₁	X	O ₂

Note: E : Experimental Class
C : Control Class
O₁ : Pre-test

X : Treatment

O₂ : Post-test

— — — : Experimental and control class are resulted from purposive sampling technique

(Cohen, Manion, and Morrison, 2007: 283).

2. Research Variabel

The researcher focused on the study of the effect of a treatment, in accordance with what is explained by Arikunto (2010: 162), this research consists of two variables: independent variable and dependent variable.

Independent variable is a variable that is stated to cause some outcome; it is the cause (Schreiber & Asner-self, 2011: 152). In this research, the independent variable is the use of Affixation in Sentence Context. Dependent Variable based on what is stated by Schreiber & Asner-self (2011: 152), dependent variable is the outcome of the independent variable; it is the effect. The dependent variable observed of this research is the students' English Vocabulary.

B. Population and Sample

1. Population

Creswell (2012: 142) defines population or target population as a group of individuals who have the same characteristic or with some common defining characteristic that the researcher can identify and study. Population of this research was at the second grade students of MTsN Pangkep for the academic year

2016/2017. It consists of eight classes VIIIA, VIIB, VIIC, VIID, VIIE, VIIF, VIIG, VIHH with 195 students.

2. Sample

Sample is a part of representative of the population which is researched, (Arikunto, 2010: 134). Hence, the researcher used non probability sampling. It is due to accessibility issue, desire for specific, cost and recommendation of the English teacher of MTsN Pangkep. The other reason, because quasi experimental design just needs two classes as this research. Thus, the researcher used non probability sampling technique, also called purposive sampling technique.

The researcher selected two classes at the second year students of MTsN Pangkep to be sample of the research. The number of respondent chosen to be sample were 39 students those were VIII G and VIII H classes. It was equal to 20% of the population. There were 18 students in VII G as an experimental class and there were 21 students in VII H as a control class.

C. Research Instrument

Arikunto (2010: 193-202) states research instruments or evaluation tools used to obtain data related to the variables of the research could be tests, questionnaires, interviews, observation, rating scale, or documentation. To help obtain the data, research instrument employed in this research is test. The research will use only one kind of instrument, namely an objective test on vocabulary, which was meant to get data about the students' vocabulary achievement before and after the treatment (pre-

test and post-test). It consisted of twenty five items, asking the students to form nouns from the verbs and adjectives given in sentence context.

D. Data Collection Procedure

In conducting the research in the experimental class, the researcher had the following procedures:

1. Pre-test

Before giving treatment, the researcher administrated a pre-test used the vocabulary test, to find out the vocabulary achievement of the students before given treatment.

2. Doing treatments

The sampling class was taught vocabulary through the use of affixations in sentence contexts. The treatment took place for six meetings, under the following steps of presentation:

a. Introduction

The researcher introduced the suffixes involved (noun and adjective formers).

b. Explanation

The researcher explained how the suffixes (noun formers and adjective formers) used.

c. Exemplification

The researcher gave examples of suffixations for noun/adjective formations in sentence contexts.

d. Practice

The researcher got the students to practice suffixation in sentence contexts.

e. Correction

The researcher checked the students' work and made corrections if necessary.

While in the control class the researcher taught vocabulary by using affixations in individual word with the conventional teaching technique. The researcher explained the affixation to the student and gave the example of affixation in individual word. The students aimed to pronounce the affixation words correctly and also memorize it. Both of the class spent five meetings of learning vocabulary from the second meeting until the sixth meeting.

3. Post-test

After the treatments finished, the students was given a posttest. The posttest was intended to find data about the students' vocabulary achievement after giving the treatments. The items and content of posttest was same as in the pre-test.

E. Data Analysis Technique

In analysing the data, the researcher used five procedures as follow:

1. Scoring the students' correct answer of pre-test and post-test.

$$\text{score} = \frac{\text{Students' correct answer}}{\text{total number of items}} \times 100$$

(Nawas in Ramadhan 2011, 5)

2. Classifying the students' score answer into the following criteria as follow:

Scale	Classification
-------	----------------

90-100	Very good
70-89	Good
50-69	Fair
30-49	Poor
10-29	Very poor

(Nawas in Ramadhan 2011, 51)

3. Calculating the collecting data from the students in answering the test, the researcher used formula to get mean score of the students as follow:

$$\bar{x} = \frac{\sum x}{N}$$

Where:

\bar{x} = mean score

$\sum x$ = the sum of all scores

N = total number of sample. (Gay, 1981: 298)

4. Finding out the standard derivation of the students' pre-test and post-test,

$$SS_1 - X_1^2 \frac{(\sum x)^2}{N_1} \quad SS_2 - X_2^2 \frac{(\sum x)^2}{N_2}$$

$$SD_1 = \sqrt{\frac{SS_1}{N_1}} \quad SD_2 = \sqrt{\frac{SS_2}{N_2}}$$

SS_1 = sum of squares of experimental group

SS_2 = sum of squares of control group

X_1 = the sum of scores of experimental group

N_1 = number of students of experimental group

N_2 = number of students of control group

SD_1 = standard deviation of experimental group

SD_2 = standard deviation of control group

(Gay, 1981: 298)

5. The researcher used T-test to know whether there was significant differences between the two groups before and after giving the treatment as follows:

$$t = \frac{\bar{x}_1 - \bar{x}_2}{\sqrt{\left(\frac{SS_1 + SS_2}{n_1 + n_2 - 2}\right) \left(\frac{1}{n_1} + \frac{1}{n_2}\right)}}$$

SS_1 = sum of squares of experimental group

SS_2 = sum of squares of control group

X_1 = the sum of scores of experimental group

N_1 = number of students of experimental group

N_2 = number of students of control group

X_1 = mean score of experiment group

X_2 = mean score of control group

(Gay, Mills, and Airasian 1981: 127)

6. Hypothesis Testing

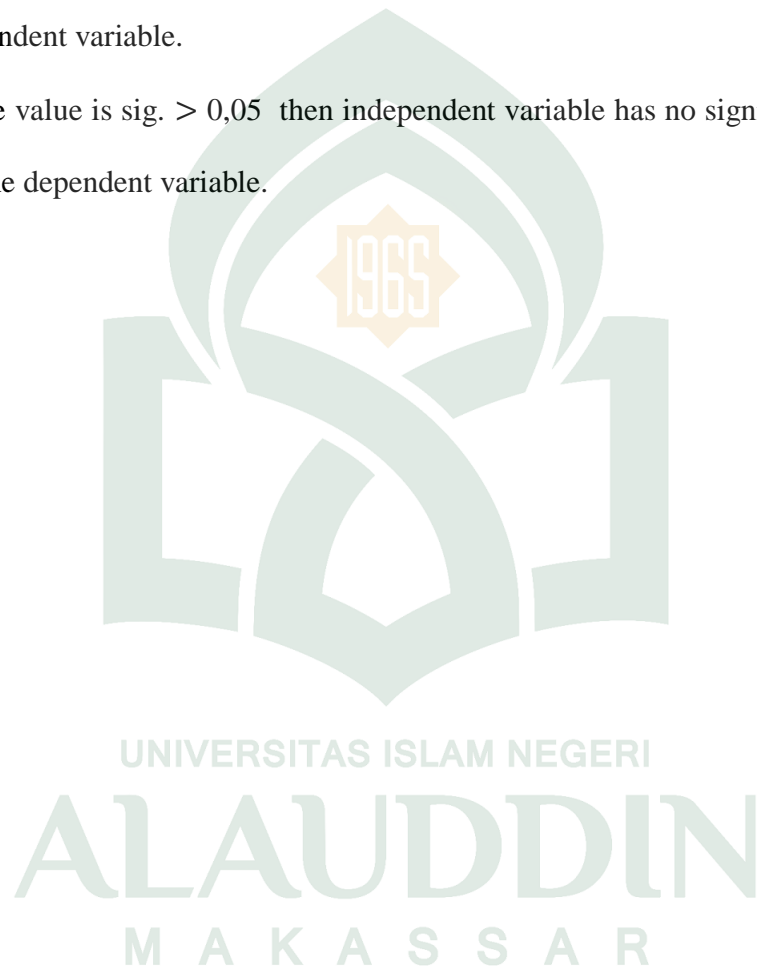

Partial test in multiple regression analysis aims to determine whether the independent variable (X) partially significant effects on the dependent variable (Y).

Basic Decision Making for Partial T-Test in Regression Analysis

- a. Based on the value of t-test and t-table

- 1) If $t\text{-test} > t\text{-table}$ then the independent variable affects on the dependent variable.

- 2) If $t\text{-test} < t\text{-table}$ then the independent variable does not affect on the dependent variable.
- b. Based on the significance value of SPSS output results
- 1) If the value is $\text{sig.} < 0.05$ then independent variable has significant effect to dependent variable.
 - 2) If the value is $\text{sig.} > 0,05$ then independent variable has no significant effect on the dependent variable.

CHAPTER IV

FINDINGS AND DISCUSSIONS

This chapter deals with two sections they are findings and discussions. It presents the findings of the research which are presented as data description, and the discussion of findings reveals argument and further explanation of the findings. Furthermore, the researcher analyzed the data consisting of the result of pre-test and pos-test either in experimental class and control class.

A. Findings

Findings of the study dealt with the presentation rate of the students' score were obtained from the test to find the mean score, standard deviation, and hypothesis testing. Those data were used to answer the research question about whether the use of affixations in sentence contexts is effective in improving the students' vocabulary mastery and to find out the extent to which the use of affixations in sentence contexts effective in improving the students' vocabulary mastery that described on the following findings:

UNIVERSITAS ALAUDDIN NEGERI
ALAUDDIN
M A K A S S A R

1. The classification of students' pre-test and post-test scores in experimental class

Table 4.1
The Rate Percentage of Score Experimental Class In Pre-Test

No.	Classification	Scale	Frekuensi	Presentase (%)
1.	Very Good	90-100	0	0
2.	Good	70-89	0	0
3.	Fair	50-69	0	0
4.	Poor	30-49	8	44,44
5.	Very Poor	10-29	10	55,56
Total			18	100

Table 4.1 showed the percentage score of the experimental class in the pre-test from 18 students. It was seen that there were 8 (44,44%) students got poor score and 10 (55,56%) students got score very poor. None of students that included in fair and good score.

Table 4.2
The Rate Percentage of Score Experimental Class In Post Test

No.	Classification	Scale	Frekuensi	Presentase (%)
1.	Very Good	90-100	0	0
2.	Good	70-89	8	44,44
3.	Fair	50-69	6	33,33
4.	Poor	30-49	2	11,11
5.	Very Poor	10-29	2	11,11
Total			18	100

The rate of percentage of the score of experimental class in post-test as shown table 4.2 above, there was an increasing score in which 8 (44,44%) students reached very good score and there were 6 (33,33%) students that got fair, 2 (11,11%) students got poor score and 2 (11,11%) students got very poor score.

Based on the presentation above, it could be concluded the rate percentage in post-test was higher than the rate percentage in pre-test.

2. The classification of students' pre-test and post-test score in control class.

Table 4.3
The Rate Percentage of Score Controlled Class In Pre Test

No.	Classification	Scale	Frekuensi	Presentase (%)
1.	Very Good	90-100	0	0
2.	Good	70-89	0	0
3.	Fair	50-69	4	19,05
4.	Poor	30-49	10	47,62
5.	Very Poor	10-29	7	33,33
Total			21	100

Table 4.3 presented the percentage score of the controlled class in the pre-test from 21 (19,05%) students. None of the students achieved very good score and good score. It was 4 students got fair score, while 10 (47,62%) students got poor score and 7 (33,33%) students got very poor score.

Table 4.4
The Rate Percentage of Score Controlled Class In Post-Test

No.	Classification	Scale	Frekuensi	Presentase (%)
1.	Very Good	90-100	0	0
2.	Good	70-89	0	0
3.	Fair	50-69	12	57,14
4.	Poor	30-49	4	19,05
5.	Very Poor	10-29	5	23,81
Total			21	100

While the rate percentage of the score of controlled class in post-test as table 4.4 above showed there were a different result which 12 (57,14%) students achieved fair score and there were still 4 (19, 05%) students got poor score and 5 (23, 81%) students got very poor score.

The description above showed the rate percentage in post-test was greater than the rate percentage in pre-test of control class. It means there was slight increase between students' vocabulary mastery in the pre-test and students' vocabulary mastery in the post-test.

3. The mean score and standard deviation

Table 4.5
Descriptive Statistics of Experimental Class

	N	Minimum	Maximum	Mean	Std. Deviation
Pre-test	18	10	40	24,44	7,048
Post-test	18	20	70	55,56	18,222
Valid N (listwise)	18				

Table 4.6
Descriptive Statistics of Control Class

	N	Minimum	Maximum	Mean	Std. Deviation
Pre-test01	21	10	50	31,43	14,243
Post-test01	21	20	60	40,00	13,784
Valid N (listwise)	21				

Table 4.5 and table 4.6 indicate the mean score of experimental classes in the pre-test was 24,44 with the standard deviation 7,048 while the mean score in the controlled class was 31,43 with the standard deviation 14,243. The mean score of the experimental class in the post-test was 55,56 and the standard deviation was 18,222 while the mean score of the controlled class in the post test was 40,00 and the standard deviation was 13,784.

It showed the mean score of the post-test was higher than the mean score of the pre-test and so was the standard deviation. Therefore, it can be concluded that the

use of affixations in sentence contexts could improve the vocabulary mastery of the second year students significantly.

4. The Hypothesis Testing

Table 4.7
Distribution The Value of T-Test And T-Table In Post Test

Independent Samples Test

		Post Test	
		Equal variances assumed	Equal variances not assumed
Levene's Test for Equality of Variances	F	,839	
	Sig.	,366	
t-test for Equality of Means	T	3,324	3,324
	Df	34	31,373
	Sig. (2-tailed)	,002	,002
	Mean Difference	17,778	17,778
	Std. Error Difference	5,349	5,349
	95% Confidence Interval of the Difference	Lower Upper	6,907 28,648

5. Post-test

In order to know whether or not the mean difference of both classes is statistically significant at the level of significance $p = 0,05$ or 5% degree of freedom $(N_1 + N_2) - 2 = (18 + 21) - 2 = 37$. The result of vocabulary development achieved $0,002 < 0,005$ (t-test > t-table).

Based on the analysis before, it is concluded there was a significant difference students' vocabulary mastery between experimental class and controlled class after giving treatment. It means affixation especially in sentence context could be used to improve the students' vocabulary.

The result of t-test value in vocabulary improvement indicated that it was greater than t-table value, these findings were used to determine the hypothesis (H₀) to be rejected when t-test value was greater than t-table value and alternative hypothesis was accepted (H₁) which proved that the use of affixation in sentence context was effective to improve the students' vocabulary mastery.

B. Discussion

This statistical analysis from the result of the development of students' vocabulary mastery in this research showed that the students' vocabulary mastery before teaching by using affixation in sentence context was still low both of experimental class and controlled class. It was proven by the result before treatment. Contrarily, at the result of the post-test, there was a significant development in the post-test between experimental class and controlled class. However, the result score of the post-test in the experimental class was more significant than the result score of controlled class. For this reason, the researcher concluded the treatment of affixation in sentence context is beneficial to increase the students' vocabulary at the second year students of MTsN Ma'rang Pangkep.

Through affixation, the students learn vocabulary by attaching an affix to a root word/stem to describe new word. As Garner (2002: 147) states English has a

great variety of prefixes, expressing a wide range of modification to the root words to which they are attached. In English vocabulary there are great number of words that attached by affixation, and by affixation many words can be produced. For example the word *active*, by attaching affixation it can produce new words such as *actives*, *activate*, *activated*, *activating*, *activation*, *activator*, *actively*, etc. so it may build up the students of vocabulary in meaning.

Affixation in sentence contexts build up the students' vocabulary not only in meaning, but also in word form and word use/function. For example, the suffix *-ly* is used because the sentence contexts requires the change from the adjective *ready* to an adverb *readily*; or it requires the change from the adjective *ready* to a noun *readiness*.

Teaching vocabulary through affixations in sentence contexts is one of an effective way to improve the students' vocabulary mastery. Based on the result of tests, the process of learning vocabulary using affixations in sentence contexts in MTsN Pangkep could help the students to memorize vocabulary and increase the students comprehension about the part of speech. So they can increase the vovabulary mastery. Besides, the students who had been thaught vocabulary using affixations in sentence contexts felt more fun and they were not bored in the classroom during the process of teaching learning. In the process of learning, the students in the experimental class were enjoy and enthusiastic.

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter deals with two sections. The first section contains conclusion based on the research findings and discussion. The second section contains suggestion based on the findings and conclusion.

A. Conclusion

Based on the findings and the discussion in the previous chapter, the researcher concludes:

1. Learning vocabulary through affixations in sentence contexts is effective to improve the students' vocabulary at the second year students of MTsN Pangkep.
2. The effectiveness of this vocabulary teaching method is proved from the result of the test showed that there was a significant difference between students' pre-test and post-test. Furthermore, the t-test value was higher than the t-table value. It obviously seems that there was an improvement in students' vocabulary after giving treatment by using affixation in sentence context and also teaching vocabulary through this method also built up the students vocabulary in three aspects, those are word meaning, word forms, and word use/function.

B. Suggestion

1. In teaching English vocabulary, affixation in sentence context should be used as one of the alternatives strategy which could help teacher in teaching and learning process.
2. The use of affixation in sentence context is one of the effective way to improve the vocabulary mastery because can improve the students' vocabulary not only in word meaning but also in word form and word use/function.
3. The writer hopes this research will become one of the references in teaching English.

APPENDIX A

Score of Students' Pre-test and Post-Test in Experimental Class

Respondent	Pre-test (X_1)	Post-test (X_2)	X_1^2	X_2^2
R1	30	50	900	2500
R2	10	70	100	4900
R3	30	60	900	3600
R4	30	70	900	4900
R5	10	70	100	4900
R6	20	70	400	4900
R7	30	60	900	3600
R8	40	50	1600	2500
R9	30	60	900	3600
R10	40	70	1600	4900
R11	30	60	900	3600
R12	40	70	1600	4900
R13	30	40	900	1600
R14	20	20	400	400
R15	30	30	900	900
R16	30	40	900	1600
R17	20	20	400	400
R18	20	30	400	900
Total Score	490	940	14700	54600

APPENDIX B

Score of Students' Pre-test and Post-Test in Control Class

Respondent	Pre-test (X_1)	Post-test (X_2)	X_1^2	X_2^2
R1	50	50	2500	2500
R2	30	50	900	2500
R3	30	60	900	3600
R4	30	50	900	2500
R5	50	30	2500	900
R6	50	40	2500	1600
R7	40	50	1600	2500
R8	40	50	1600	2500
R9	40	50	1600	2500
R10	10	20	100	400
R11	40	30	1600	900
R12	30	30	900	900
R13	40	50	1600	2500
R14	10	20	100	400
R15	10	20	100	400
R16	50	50	2500	2500
R17	20	20	400	400
R18	20	50	400	2500
R19	20	50	400	2500
R20	40	50	1600	2500
R21	10	20	100	400
Total score	660	840	24800	37400

APPENDIX C**The mean score of experimental and controlled class****A. Experimental class**

1. Pre-test

$$\bar{x} = \frac{\sum x}{n}$$

$$\bar{x} = \frac{490}{18}$$

$$\bar{x} = 27.22$$

2. Post-test

$$\bar{x} = \frac{\sum x}{n}$$

$$\bar{x} = \frac{940}{18}$$

$$\bar{x} = 52.22$$

B. Controlled class

3. Pre-test

$$\bar{x} = \frac{\sum x}{n}$$

$$\bar{x} = \frac{660}{21}$$

$$\bar{x} = 31.43$$

4. Post-test

$$\bar{x} = \frac{\sum x}{n}$$

$$\bar{x} = \frac{840}{21}$$

$$\bar{x} = 40$$

APPENDIX D

Standard deviation of Experimental and Controlled class

A. Experiment Class

1. Pre-Test

$$SD = \sqrt{\frac{SS_1}{n-1}}$$

Where,

$$SS_1 = \sum X_1^2 - \frac{(\sum X_1)^2}{n}$$

$$SS_1 = 14700 - \frac{(490)^2}{18}$$

$$SS_1 = 14700 - \frac{240100}{18}$$

$$SS_1 = 14700 - 13338.89$$

$$SS_1 = 1361.11$$

$$SD = \sqrt{\frac{SS_1}{n-1}}$$

$$SD = \sqrt{\frac{1361.11}{18-1}}$$

$$SD = \sqrt{\frac{1361.11}{17}}$$

2. Post-Test

$$SD = \sqrt{\frac{SS_1}{n-1}}$$

Where,

$$SS_1 = \sum X_1^2 - \frac{(\sum X_1)^2}{n}$$

$$SS_1 = 54600 - \frac{(940)^2}{18}$$

$$SS_1 = 54600 - \frac{883600}{18}$$

$$SS_1 = 54600 - 49088.89$$

$$SS_1 = 5511.11$$

$$SD = \sqrt{\frac{SS_1}{n-1}}$$

$$SD = \sqrt{\frac{5511.11}{18-1}}$$

$$SD = \sqrt{\frac{5511.11}{17}}$$

$$SD = \sqrt{80.07}$$

$$SD = \sqrt{324.18}$$

$$SD = 8.95$$

$$SD = 18.00$$

B. Controlled Class

1. Pre-Test

$$SD = \sqrt{\frac{SS_2}{n-1}}$$

$$\text{Where, } SS_2 = \sum X_1^2 - \frac{(\sum X_1)^2}{n}$$

$$SS_2 = 24800 - \frac{(660)^2}{21}$$

$$SS_2 = 24800 - \frac{435600}{21}$$

$$SS_2 = 24800 - 20742.86$$

$$\mathbf{SS_2 = 4057.14}$$

$$SD = \sqrt{\frac{SS_1}{n-1}}$$

$$SD = \sqrt{\frac{4057.14}{21-1}}$$

$$SD = \sqrt{\frac{4057.14}{20}}$$

$$SD = \sqrt{202.86}$$

$$SD = 14.24$$

2. Post-Test

$$SD = \sqrt{\frac{SS_2}{n-1}}$$

$$\text{Where, } SS_2 = \sum X_2^2 - \frac{(\sum X_2)^2}{n}$$

$$SS_2 = 37400 - \frac{(840)^2}{21}$$

$$SS_2 = 37400 - \frac{705600}{21}$$

$$SS_2 = 37400 - 33600$$

$$\mathbf{SS_2 = 3800}$$

$$SD = \sqrt{\frac{SS_2}{n-1}}$$

$$SD = \sqrt{\frac{3800}{21-1}}$$

$$SD = \sqrt{\frac{3800}{20}}$$

$$SD = \sqrt{190}$$

$$SD = 13.78$$

APPENDIX E

The Significance Different

$$X_1 = 52.22 \quad SS_1 = 5511.11$$

$$X_2 = 40 \quad SS_2 = 3800$$

1. t-Test

$$t = \frac{\bar{X}_1 - \bar{X}_2}{\sqrt{\left(\frac{SS_1 + SS_2}{n_1 + n_2 - 2}\right) \left(\frac{1}{n_1} + \frac{1}{n_2}\right)}}$$

$$2. \quad t = \frac{52.22 - 40}{\sqrt{\left(\frac{5511.11 + 3800}{18 + 21 - 2}\right) \left(\frac{1}{18} + \frac{1}{21}\right)}}$$

$$3. \quad t = \frac{12.22}{\sqrt{\left(\frac{9311.11}{37}\right) (0.1)}}$$

$$4. \quad t = \frac{12.22}{\sqrt{(251.65)(0.1)}}$$

$$t = \frac{12.22}{\sqrt{25.165}}$$

$$t = \frac{12.22}{5.02}$$

$$t_{\text{Hitung}} = 2.43$$

5. t-Table

For level of significance (D) = 0.05

Degree of freedom (df) = (N₁ + N₂) - 2 = (18 + 21) - 2 = 37

t - Table = 2.026

APPENDIX F

The Distribution of T-Table

d.f	$t_{0.10}$	$t_{0.05}$	$t_{0.025}$	$t_{0.01}$	$t_{0.005}$	d.f
1	3,078	6,314	12,706	31,821	63, 657	1
2	1,886	2,920	4,303	6,965	9,925	2

APPENDIX G
Instrument

Direction:

In each item below, there is an underlined word and a blank part. The underlined word is either a verb or an adjective. Your task is to fill in the blank part with the noun form of the underlined word.

1. A: When do we arrive in Makassar?
B: The time of _____ is 12:15.
2. A: When is Ahmad going to marry Irma?
B: The _____ ceremony is planned for April 15.
3. Ali serves all the civil _____ at that office.
4. You should revise report, and the _____ should be given to the committee.
5. There will be an examination on structure today. All of _____ are in the room.
6. The company employs a number of workers. Most of the _____ are women.
7. We are going to depart tomorrow. The time of _____ is 8.00.
8. Nita is ill now. Her _____ is strange.
9. Suci was very happy of her achievement. Her _____ made me happy too.
10. Nurul is a very active student. Yesterday, however, she did only one _____
11. Some of the most famous people in the world never really wanted _____ at all.

12. A: Does ghost exist?

B: Well, there are some people who believe in their _____

13. Dave is a strong boy. He has a lot of _____ in his arm.

14. Can you suggest what should I do next? All _____ will be welcome.

15. Indonesia is an independent country. It got its _____ in 1945.

16. John collects stamps. He has a beautiful _____

17. Paul is absent today. I noticed his _____

18. Her daughter is always very polite. I have noticed her _____

19. The driver gets penalty from the cops because he _____ so fast.

20. A: Please be patient!

B: I'm sorry I'm running out of _____

APPENDIX H
LESSON PLAN
FOR EXPERIMENTAL GROUP

The Pre-Test

1. Identity

School : MTsN Pangkep
Subject : English
Skill : Vocabulary
Class : VIII G
Time allocation : 45 minutes

2. Instructional Object

The students will be able to identify the correct words used in sentence based on its part of speech.

3. Teaching Procedure

a. Teaching Presentation

- The researcher gives the students the test sheet.
- The researcher gives explanation about the test, the rules of the test, and how to do the test.
- The researcher asks the students to do their test.

b. Students' Activity

- The students do their test individually based on the researcher's instruction.
- The students answer the question and allowed to open the dictionary.

4. Evaluating

The students' answer will be evaluated by word choice rubric and content rubric.

The Treatment – 1st Meeting

1. Identity

School : MTsN Pangkep

Subject : English

Skill : Vocabulary

Class : VIII G

Time allocation : 80 minutes

2. Instructional Object

The students will understand about part of speech.

3. Teaching Procedure

a. Teaching Presentation

- The researcher explains to the students about part of speech.
- The researcher asks the students to open their dictionary.
- The researcher explain to the students about the mark using in dictionary based on its part of speech e.g N for Noun, V for Verb, and Adj for Adjective.
- The researcher explains the function of some words based on its part of speech in the sentence.

b. Students' Activity

- The students is asked to memorize the part of speech.
- The students should be able to identify the mark of part of speech in the dictionary.
- The students should be able to pronounce the words correctly.

4. Evaluating

The students write down the meaning of the available words also with their part of speech.

The Treatment – 2st Meeting

1. Identity

School : MTsN Pangkep
Subject : English
Skill : Vocabulary
Class : VIII G
Time allocation : 80 minutes

2. Instructional Object

The students will understand about affixations used in Indonesian language.

3. Teaching Procedure

a. Teaching Presentation

- The researcher gives the students example of some Indonesian words and also their affixion.
- The researcher explains to the students the affixations that used in Indonesian language such as *pe-*, *me-*, *-an*, *Ter-*, *ke-*, and *di-*.
- The researcher explains about the affixation above that can change the part of speech e.g : the words in Indonesian Language that has affixations *ke-* and *-an* includes in Noun category. In addition, the affixation *me-* and *-an* includes in Verb category.

b. Activity

- The students are asked to memorize the affixation using in Indonesian language also their parts of speech.
- The students explain the meaning of every words.

4. Evaluating

- The students are asked to write down somewords and classified them based on its affixation also their part of speech.

The Treatment – 3st Meeting

1. Identity

School : MTsN Pangkep

Subject : English

Skill : Vocabulary

Class : VIII G

Time allocation : 80 minutes

2. Instructional Object

The students will understand about affixation used in English.

3. Teaching Procedure

a. Teaching Presentation

- The researcher gives the students example of affixation used in English, e.g *-ness, -er, -ion*, etc.
- The researcher explains the function of affixation e.g: adding affixation *-ness* could change the part of speech from adjective to Noun. In addition *-ion* could change the part of speech from V to Noun.
- The researcher teaches the students how to pronounce the words.
- The researcher gives some vocabulary list to the student.
- The researcher gives instruction to the students.

b. Students' Activity

- The students are asked to add an appropriate affixation to the words in given in the paper.
- The students identify the kind of part of speech using in the words before and after adding some affixations.

4. Evaluating

The students identify affixations used in the words, classify their part of speech, and write down the meaning of the words.

The Treatment – 4th Meeting

1. Identity

School : MTsN Pangkep

Subject : English

Skill : Vocabulary

Class : VIII G

Time allocation : 80 minutes

2. Instructional Object

The students will understand the affixations in sentence context in Indonesian language.

3. Teaching Procedure

a. Teaching Presentation

- The researcher gives the students some examples of Indonesian language sentence containing the affixations.
- The researcher explains the name of parts of speech used and sentence and also their function.

b. Students' Activity

- The students identify the affixations adding in the words in sentence and identify the parts of speech also their function.

4. Evaluating

The students' answer will be evaluated by content rubric.

The Treatment – 5nd Meeting

1. Identity

School : MTsN Pangkep

Subject : English

Skill : Vocabulary

Class : VIII G

Time allocation : 80 minutes

2. Instructional Object

The students will understand about the affixation in sentence contexts used in English.

3. Teaching Procedure

a. Teaching Presentation

- The researcher gives the students some example of English sentences that some words of the sentence contains of affixations.
- The researcher explains the name of affixation putting in the words and also their function.
- The researcher teaches the students how to pronounce the words and tell them the meaning of the words.

b. Students' Activity

- The students are asked to write the words contain affixation and memorizing them.
- The students identify the parts of speech of affixation used.

4. Evaluating

The students' answer will be evaluated by content rubric.

The Treatment – 6nd Meeting

1. Identity

School : MTsN Pangkep

Subject : English

Skill : Writing

Class : VIII

Time allocation : 80 minutes

2. Instructional Object

The students are given the answer sheet and asked to fill the appropriate words in the blank.

3. Teaching Procedure

a. Teaching Presentation

- The researcher explains how to fill in the blank of the answer sheet.
- The researcher gives the students another example of sentence and show to the students the answer.
- The researcher explains the appropriate words using in the sentence.

b. Students' Activity

- The students are asked to do their answer sheet.

4. Evaluating

The students' answer will be evaluated by content rubric

The Post-Test

1. Identity

School : MTsN Pangkep
Subject : English
Skill : Vocabulary
Class : VIII G
Time allocation : 45 minutes

2. Instructional Object

The students will be able to fill the appropriate words in sentence context.

3. Teaching Procedure

c. Teaching Presentation

- The researcher gives the students the test sheet.
- The researcher gives explanation about the test, the rules of the test and how to do the test.
- The researcher asks the students to do their test.

d. Students' Activity

- The students do their test individually based on the researcher's instruction.
- The students answer test and given time an hour and half.

4. Evaluating

The students' answer will be evaluated by word choice rubric and content rubric.

CURRICULUM VITAE

The writer, Raodhatul Jannah was born on July 4th 1995 in a small town, Talaka, Ma'rang, 20 km north of Pangkep city. She is the daughter of H. Abd Haris and Hj. Suhana Azis. Growing up, she was full of energy and somewhat troublesome, so her parents decided to pay more attention to her and enroll her to state school to keep her out of trouble. She first studied at Islamic Kindergarten Laikang and graduated there on 2001. In the age of six, she was sent to Elementary 3 Tala then graduated in 2007.

She continued his study in state islamic School/MTsN Pangkep and graduated in 2010. In the same year, she went on her study in state Islamic School/MAN 1 Pangkep and graduated in 2013.

In the following years, she continued her struggling on academic study at Alauddin State Islamic University of Makassar 2013-2017. In this phase, she opted for being an English teacher in one of courses for about a year.
