PERSETUJUAN PEMBIMBING

Pembimbing penelitian skripsi saudara Sarah Sabdarifah, NIM: 20400113098, mahasiswi jurusan Pendidikan Bahasa Inggris, Fakultas Tarbiyah dan Keguruan UIN Alauddin Makassar, setelah seksama meneliti dan mengoreksi skripsi yang bersangkutan dengan judul **A Comparative Study between Sanguine and Phlegmatic Students' Concerning Their English Listening Skill at the Third Year Students' of MAN 1 Makassar** memandang bahwa skripsi tersebut telah memenuhi syarat-syarat ilmiah dan dapat disetujui untuk dapat diajukan ke sidang munaqasyah.

Demikian persetujuan ini diberikan untuk proses selanjutnya.

ABSTRACT

Researcher : Sarah Sabdarifah
Reg. Num : 20400113098
Title : A Comparative Study between Sanguine and Phlegmatic Students Concerning Their English Listening Skill at the Third Year Students' of MAN 1 Makassar
Consultant I : Dr. Hj. Mardiana, M.Hum.
Consultant II : Dra. St. Nurjannah Yunus Tekeng, M.Ed, MA.

This research was generally attempted to know and to describe the difference between sanguine students and phlegmatic students in their achievement in listening skill at the third year of MAN 1 Makassar. The objective of this research was to find out the differences on listening skill between sanguine and phlegmatic students.

The research method of this research was comparative method. The population of this research was the third year students' of MAN 1 Makassar which consist of 237 students and the sample of this research was the class XII MIA 1 – XII MIA 3 of MAN 1 Makassar. This research was started by giving the students personality test which taken from standardized test by Florence Littauer, and then classify the sanguine student and phlegmatic student. After classifying students' personality, the researcher took the students listening score in third class in order to compare their listening score.

In analyzing the data, the first step was finding the average of sanguine and phlegmatic students' listening score and standard deviation to do homogeneity test. The second, the t-test was used to prove the significant data. And the last step was answering hypothesis of the research.

The result of the research showed that the phlegmatic students' listening scores was higher than the sanguine students. It could be seen through the mean scores of both temperament. Mean scores of the sanguine students were 53.82 while the mean scores of the phlegmatic students were 60.7. After calculating the t-test, the researcher found out that t-test value was lower than t-table value ($-2.231 < 1.98$). Therefore, the researcher concluded that there was no significant difference between the sanguine and phlegmatic students in their achievement in listening skill. It means that the students' personality not affect the listening skill, and every students have their own way to achieve their goal in Second Language.

CHAPTER I

INTRODUCTION

A. *Background*

English becomes a compulsory subject in Indonesia schools. Learning English in Indonesia aims to improve the ability to communicate in English. There are four existing skills in English and must be mastered by the students, examples; speaking, reading, writing, and listening. In fact, the students have different achievement in those skill, some students have better achievement in a certain skill and the other students have better achievement in another skill.

The first experience that students acquired by the time they were born was much influenced by listening. The beginning of our learning is from hearing, because of that many educational experts and educational theories claim that the first learning activity is auditory (through the listening process). This is in harmony with the Qur'an verse which indicates that God made the first "sam'a" (hearing) upon man after they were expelled from his mother's belly in a state of ignorance:

وَاللَّهُ أَخْرَجَكُمْ مِنْ بُطُونِ أُمَّهَاتِكُمْ لَا تَعْلَمُونَ شَيْئًا وَجَعَلَ لَكُمُ السَّمْعَ وَالْأَبْصَارَ

وَالْأَفْئِدَةَ لَعَلَّكُمْ تَشْكُرُونَ ﴿٧٨﴾

Meaning:

“And Allah brought you forth from the wombs of your mothers not knowing anything and He gave you the senses of hearing, seeing and comprehending. It is hoped that you would be grateful.”

Based from the verse, we can conclude that hearing is the main process that made in human as a recorder of learning input, and then the vision (abshoor) and the heart (af-idah). All of that is for human to be grateful for being given the favors of sensual perfection to study.

So, it is important for English teacher to help students to develop their listening skill in learning English. Thus, helping students to develop their listening skill besides reading, writing and speaking is one of the language teacher's important duties. Nunan (1997) stated that listening is assuming greater and greater importance in foreign language classrooms. There are several reasons for this growth in popularity. By emphasizing the role of comprehensible input, second language acquisition research has given a major boost to listening.

There are many factors which can influence the students' achievement of certain language skills. It might be caused by the teacher and the students. From the teacher's point of view, there are some factors which can influence the students' achievement in language skills, such as, the quality of the teacher, the teaching style, and the performance of the teacher. From the students' side, motivation, style in language learning and personality of the students can give the impact to the students' achievement. As Hamouda (2013) stated that factors causing students listening comprehension problem are categorized into different sources including problems related to the listening text, listening problems related to task and activities, listeners problems related to the listener and teacher's methodology. Thus, it was the way to find out the students' difficulties from three main areas: listener factors, listening material and physical setting.

Also, it became guidance for the teacher to overcome listening comprehension. Komarraju et al., (2011) stated a significant correlation between learning styles, personality traits and academic achievement. In this case, the researcher only will focus on the personality factor.

Eysenck as cited in Meta Listina et al (2013), divided personality into two types, they are extroversion and introversion. Each type has its own characteristics, such as sociality, activity, expansiveness, and etc. The extroverts and the introverts are classified into stable-unstable extroverts and stable-unstable introverts which have its own characteristics. It is divided based on the emotional stability-unstability. The stable extroverts have sanguine qualities whereas the unstable extroverts have choleric qualities. Then, the stable introverts have phlegmatic qualities, in the other hands unstable introverts have melancholic qualities. Actually, the stable-unstable extroverts and the the stable-unstable introverts have almost the same characteristics, it is only differentiated by the emotional stability. But, based on the emotionally stability the stable extroverts and introverts have more positive and dominant characteristics more than the unstable extroverts and introverts.

Sanguine is active trait, and the phlegmatic is passive trait. The active trait and the passive trait affect an individual willingness to speak, of course the sanguine students are more talkative than the phlegmatic students which rather like to keep silent. But the phlegmatic students are good listeners than the sanguine students. Nicholson (2015) said that an introvert have more developed

listening skills than an average extrovert. While an Extrovert more developed as observer.

Abdolraoof (2012) has shown that there was a significant relationship between listening ability of subjects and the personality characteristic in question, i.e. extroversion vs introversion. The scores of listening ability had a positive relationship with the introversion of subjects, that is, the more introvert the subjects, the better their performance on listening. The result was in accordance with Eysenck (1965) who stated that the introvert learners tend to be better performance in receptive skill like listening, reading, and structure. In addition, Entwistle and Wilson (1977) claim that introverts will achieve more because they have better long-term memory than extroverts. Besides, they take learning a language in a more serious way and spend more time on reading, writing, and listening due to their personality trait.

However, many researchers have found that there is not correlation between extroversion/introversion personality trait and listening. Karbalaee (2008) conducted a study on the relationships between extroversion/introversion personality variables and EFL learners' performance on listening strategies. The results showed that extroversion/introversion personality trait had no significant effect on EFL learners' use of listening strategies. Nasrabadi (1996) examined the role of extroversion-introversion personality dimension in EFL listening comprehension in Iran. He found significant results for extroverts. And Daneshvari (1996) also examined the role of extroversion/introversion in EFL

listening comprehension in Iran. He concluded that extroverts were better listening strategy users in comparison with introverts.

Some of the previous research results there are contradictions of findings. And the researcher is inspired to re-examine aspects of extroversion-introversion personality in listening skill at the third year students of MAN 1 Makassar. Based on some explanation above, the researcher excited to conduct a research entitled “A Comparative Study between Sanguine and Phlegmatic Students Concerning Their English Listening Skill at the Third Year Students’ of MAN 1 Makassar”.

B. *Research Problem*

Based on the background above, the problem in this study is:

Is there any statistically significant difference between the sanguine and phlegmatic students in their listening skill?

C. *Research Objective*

According to the research problem above, this study aims to:

To find out the significant difference between the sanguine and phlegmatic students in their listening skill.

D. *Research Significance*

1. Teacher

This research can contribute to all teachers to consider students’ personality and determine the best strategy in teaching learning process to minimize students’ gap and maximize their potential in listening skill.

2. Further Researchers

The result of this study is expected to be used as consideration or preview for the next researchers in doing the same field of the study in another skill.

E. *Research Scope*

The scope of this research will concern to the students with sanguine personality and phlegmatic personality which will be compared by their English listening score at the third year of MAN 1 Makassar.

F. *Operational Definition of Terms*

1. Listening skill

The act or ability of understanding what the speaker is saying. Understanding the meaning of interpersonal or transactional discourse both of formally and informally in context of daily life, especially in the form of short functional recount text, news item, report, narrative, descriptive and review. In this research, the listening test conducted to compare listening skill of sanguine and phlegmatic students in MAN 1 Makassar.

2. Sanguine

Sanguine personality is the most open among all types of temperament. Sanguine person is a person who likes to talk, easy to adjust, friendly, warm, and full of humor and responsive. Sanguine person is sociable and spontaneous. But sanguine's weakness is that they tend impulsive, that is, those who act on emotions or desires.

3. Phlegmatic

Phlegmatic is reserved or quite person, prudent, sensible, reflective, respectful, and dependable. They are not easily insulted or provoked to anger, even they do not like exaggeration in speech. They are loyal and committed, tolerant and supportive. They also have excellent quality, very discipline, and excel in profession where being calm under pressure, more over they are agreeable people, they often hide their will even ignore it.

CHAPTER II

REVIEW OF RELATED LITERATURE

A. *Literature Review*

1. **Some Previous Related Research Findings**

Hadidi (2015) conducted a study to investigate the relationship between personality type, which measured by Eysenck Personality Questionnaire (EPQ-R, 1999) and listening performance. The data were collected through Pearson Correlation Coefficient test and the results of statistical analysis showed that there was a statistically significant relationship between personality type and listening performance.

Arina (2015) conducted a study under the title “A comparative analysis between students with sanguine and phlegmatic personality on their achievement in speaking skill”. The researcher used quantitative research and comparative analysis technique. In the result of the study showed, that sanguine and phlegmatic students have no difference in English speaking skill achievement.

Behdokht Mall-Amiri (2013) in his research about comparing the performance of extrovert and introvert intermediate female EFL learners on listening and reading tasks, he used Preliminary English Test (PET), Eysenck Personality Inventory (EPI), and test of reading tasks, (60 items). The results indicated that introverts perform significantly better in listening tasks than extroverts but in reading section, there was no significant difference between the two groups of students.

Abdolraoof (2012) conducted a study to investigate the possible relationship between introversion/extroversion and the listening ability of intermediate Iranian EFL (English as a Foreign Language) learners by taking into account their gender, age, and grades of study. The results indicated that there were significant relationship between listening ability of subjects and the personality characteristic in question, i.e. extroversion vs. introversion. The scores of listening ability had a positive relationship with the introversion of subjects, which is the more introvert the subjects, the better their performance on listening.

Based on the previous studies, the researcher concluded that the personality of students has significant correlation with listening achievement and the differences between previous study and this research were; first, in this research, the researcher apply this research in Indonesian school and the second, this research only focus on sanguine personality which is the extrovert students and the phlegmatic personality which is the introvert students.

2. *Some Pertinent Ideas*

a. **Listening**

1. The Definition of Listening

Steinberg (2007) in Bingol mentioned listening process as the ability of one individual perceiving another via sense, aural organs, assigning a meaning to the message and comprehending it. Listening include some features. The most important features can be defined as: coping with the sounds, understanding

intonation and stress, copying with redundancy and noise, predicting, understanding colloquial vocabulary, fatigue, understanding different accents, using visual and environmental clues. Planning, exercises, listening materials, task and visual materials should be taken into consideration. The teacher should produce a suitable discourse while using recordings. A preset purpose, ongoing learner response, motivation, success, simplicity, and feedback should be the things considered while preparing the listening comprehension.

Listening has often been called a passive skill. This is misleading, because listening demands active involvement from the listeners. As Rost (1991) states that: "Listening is an active process requiring participation on the part of the listener." Thus, listening does not mean just sitting quietly while another person does the speaking. It means that the listeners must interact with the incoming information in order to obtain meaning. In other words, they do not only receive and record but also process and interpret what they hear. So, listening is more than simply hearing or perceiving aural input. It is the interpretation of sounds into meaning.

The definition of listening according to Morrow and Johnson (1998) : "Listening refers to the ability to understand how a particular sentence relates to what else has been said and its function in the communication." While Underwood (1996) states that "... Listening is the activity of paying attention to and trying to get meaning from something we hear."

The definitions above explain that listening is an action which requires effort and attention to capture the meaning from what we hear. It is explained

that listening is the ability to understand the relationship between sentences being said and its role in the communication. To listen successfully to spoken English, we need to be able to work out what speakers mean when they use particular words on particular occasions, and simply understand the words themselves. In other words, to listen effectively, we need to understand the speakers' intention when they apply certain words in certain situations. So, while listening, the listeners are required to be able to listen to the information carefully to get the message being spoken by the speakers.

In order to get the meaning intended by the speaker, listeners have to use strategies for comprehension. Chamot (1995) proposed three categories of listening strategies. (1) Cognitive Strategies. They are used to process, interpret, store and recall information. They involve inferencing, elaboration, prediction, visualization and reconstruction. (2) Metacognitive Strategies. They are used to manage and facilitate mental process, cope with difficulties during listening. They involve pre-listening preparation, selective attention, directed attention, comprehension monitoring, and comprehension evaluation. (3) Social-Affective Strategies. They are used to enlist the help of others to facilitate comprehension and manage one's emotion when listening. They involve cooperation and confidence building.

In listening comprehension activity, the listener often gets little information, or even does not understand what the speaker is saying. According to Krashen (1998) it happens because the listener is trying to understand all the words he hears. He says that most adults expect to understand a new language by

learning the meaning of every word they hear. Similarly Rost states that there are some reasons it happens: poor understanding results when listeners do not pay attention, listeners may experience a lack of attention for variety of reasons; they may lose interest in the topic or the activity; they can not keep up with what is going on; they have lost track of goals for listening; or they are thinking too much about their own response instead of concentrating on what is being said.

Based on the above theories it can be concluded that the listeners' attention and concentration toward what is being heard are important things in listening process. Without full concentration it is impossible for the listeners to follow the listening texts, understand the content, and give acceptable answers. Because of the listeners' active participation, then some experts state that listening is an active receptive process.

Meaning takes a significant part in listening comprehension. Listeners will try to understand the meaning of the information/message communicated by the speaker. The messages which are communicated involve both verbal and non verbal aspects of the language. Feyten (1991) points out that "Listening involves not only the ears, but also an analysis of the paralinguistic and verbal messages. Gaining knowledge from other aspects of non verbal transmission is also involved." Anderson and Lynch (1998) agree with Feyten by explaining that "Listening is not simply an aural activity and that successful comprehension involves the exploitation of all possible sources of useful information.

Supporting the two theories above, Littlewood (1998) argues that "The nature of listening comprehension means that the learner should be encouraged

to engage in an active process of listening for meanings, using not only the linguistic cues but also his/her non linguistic knowledge.” It is clear that meaning can be understood/comprehend through interpreting the words spoken, which represent the linguistic aspects; through the tone of voice, pitch, intonation, stress, and other paralinguistic features; and, finally, through non verbal aspect such as body language. Furthermore, students, as listeners, should be made aware that not every clue, in this case word, is equally important to the message. Therefore, when they miss a piece of language, they need not panic since there is a good chance that other clues will enable them to understand the message. As Littlewood suggests that “the criterion for success in listening is not whether he (student, as a listener) has understood every word, but whether he has constructed enough of the meanings in order to satisfy his own communicative purpose.”

2. Factors in Listening Process

Listening is a demanding process, not only because of the complexity of the process it self but also due to the factors that characterize the listener, the speaker, the content of the message, and any visual support that accompanies the message (Brown and Yule, 1983).

a) The listener

Interest in a topic increases the listener’s comprehension; the listeners may avoid the topic that is not interesting for them. A listener who is an active participant in a conversation generally has more understanding of the topic being discussed than a listener who is listening to a conversation on recorded materials.

Furthermore, the ability to use negotiation skills, such as asking for clarification, repetition or definition of points that he does not understand, enables a listener to make sense of the incoming information.

b) The speaker

Idiomatic language and reduced forms make comprehension more difficult. The extent to which the speaker uses these language forms has an impact on listeners' comprehension. The more exposure the listener has to them, the greater his ability to comprehend. A speaker's rate of delivery may be too fast, too slow, or has too many hesitations for a listener to follow.

c) Content

The content that is familiar is easier to comprehend than the content with unfamiliar vocabulary or which the listener has insufficient background knowledge.

d) Visual support

Visual support, such as video, pictures, diagrams, gestures, facial expressions, and body language, can increase comprehension if the learner is able to interpret it correctly.

3. Aspects Dealing With Listening Process

According to Celce – Murcia and Olshtain (2000), there are two aspects dealing with listening process. They are:

a) Top-down listening aspect

This aspect contains:

- 1) Schematic knowledge that consists of content schemata that is the background knowledge of the topic and formal schemata which includes the knowledge of how the discourse is organized by looking at different genres, topics and purposes.
- 2) Contextual knowledge that involves the understanding of the particular listening situation on its context. For example, the listeners estimate about who the participants are, what the setting is and what the topic and the purpose are.

b) Bottom-up listening aspect

This aspect includes the knowledge about the language system, such as the knowledge about the grammar, vocabulary, and phonological system.

4. Difficulties Faced by the Students in Listening Comprehension.

Listening, mostly, is considered as the most difficult skill in learning English because to get the main idea or the message conveyed in a speech, we have to pay more attention to catch the idea. Ur (2001) states some difficulties faced by the students in the classroom when they were having listening activity, which are:

- a) Students are mostly difficult to catch what the speaker says about.
- b) Students feel that they have to understand every word said by the speakers.
- c) Students find it difficult to catch the meaning when the speakers use the normal speed of sound.

- d) It is not enough to hear the speech just once.
- e) It is hard for the students to keep up with all the information that they get.
- f) When the listening activity requires longer texts, the students will get bored of it and that will make them lose their concentration.

To handle the problems that occur in the process of listening, Celce-Murcia and Olshtain suggest the strategies in teaching listening, as follows:

- a) Make the students aware of the need of using the strategy.
- b) To create the students' background knowledge, use the pre-listening activities as the warm-up.
- c) Tell the students about the learning purpose.
- d) Use the real data that focuses on meaning and content.
- e) Provide guide for listening activities.

Based on Asmawati (2017) Listening is very difficult skill for students who study foreign language. And there were three factors influenced students' listening; listening material, listener factor, and physical setting. Therefore, accents, pronunciation, speed of speech, insufficient vocabulary, different accent of the speakers, lack of concentration, and bad quality of recording were the major problems encountered by students' English Education Department. Understanding students' difficulties enable the lecturer to help the students developing the effective learning strategies and ultimately improve their listening. Solutions to overcome the problems were: the teacher should adapt and

improve listening material, activate students' vocabulary, give the students variety of accent while practice listening in language laboratory, improve their pronunciation by training from native speakers, building students' knowledge about the topic, give some strategy in listening, and always motivate students.

According Nurpahmi (2015) Listening tasks can be very disheartening and demotivating, especially if students have had a previous negative experience. It is therefore important to give our students plenty of opportunities to practise the skill of listening in a supportive environment that helps them to learn. We need to design tasks that help them learn rather than merely testing their abilities. This means that we guide them through the recording, pre-teach language and highlight the essential points of the recording. This is in contrast to testing, where the teacher simply plays the recording and the students listen and answer questions.

b. The Sanguine Personality

The cheerful sanguine is temperament which a warm, vibrant, lively and fun. He can receive all the circumstances, and the impressions that seen can be easily affected his heart that quickly responded. His decisions are more determined by feeling than thinking.

Bennet (2005), said that the sanguine is the creative, fun-loving, high-spirited sanguine's natural tendency to look on the bright side, to enjoy people, and to seek out adventure sometimes results in a label of superficiality and

frivolity, more joyful place because of the inspiration, enthusiasm, and fellowship he provides.

The points below are from the book of 'Personality Plus' authored by Florence Littaire, they are traits which appear in variety of quantity. The following are several descriptions of strength and weakness of the sanguine personality:

Playful	Cheerful
Sociable	Inspiring
Convincing	Demonstrative
Refreshing	Mixes-easily
Spirited	Talker
Promoter	Lively
Spontaneous	Cute
Optimistic	Popular
Funny	Bouncy

Table 2.1

Strengths of a sanguine

Strengths of a Sanguine	
The Extrovert, the Talker, the Optimist	
The Sanguine's Emotions	The Sanguine At Work
• Appealing personality	• Volunteers for Jobs
• Talkative, Storyteller	• Thinks up new activities
• Life of the Party	• Looks great on the Surface
• Good sense of humor	• Creative and colorful

• Memory for color	• Has energy and enthusiasm
• Physically holds on to listener	• Starts in a flashy way
• Emotional and demonstrative	• Inspires others to join
• Enthusiastic and expressive	• Charms others to work
• Cheerful and bubbling over	The Sanguine As A Friend
• Curious	• Makes friends easily
• Good on stage	• Loves People
• Wide-eyed and innocent	• Thrives on compliments
• Lives in the present	• Seems exciting
• Changeable disposition	• Envied by others
• Sincere at heart	• doesn't hold grudges
• Always being a child	• Prevents dull moments
• Apologizes quickly	• Likes spontaneous activities
The Sanguine As A Parent	
• Makes Home Fun	
• Is liked by children's friends	
• Turns disaster into humor	
• Is the circus master	

The strength of the sanguine is his ability to “live in the present moment”; he has a very optimistic, joyful attitude toward life. The sanguine is often adventuresome, enterprising, and creative - and is a source of inspiration to others (Bennet, 2005).

Traits below are the negative of the sanguine in some ways of the student type when he interacts in school environment. Florence Littaire mentioned the traits as follow:

Brassy	Wants credits
Undisciplined	Talkative
Repetitious	Disorganized
Forgetful	Inconsistent
Interrupts	Messy
Unpredictable	Show-off
Haphazard	Loud
Permissive	Scatter brained
Angered easily	Restless
Naive	Changeable

Table 2.2
Weaknesses of a sanguine

Weaknesses of a Sanguine	
The Sanguine's Emotions	
• Compulsive talker	The Sanguine At Work
• Exaggerates and elaborates	• Would rather talk
• Dwells on trivia	• Forgets obligations
• Good sense of humor	• Doesn't follow through
• Scares others off	• Confidence fades fast
• Too happy for some	• Undisciplined
• Has restless energy	• Priorities out of order
• Egotistical	• Decides by feelings
• Blusters and complains	• Easily distracted
• Naive, gets taken in	• Wastes time talking
• Has loud voice and laugh	The Sanguine A Friend

• Controlled by circumstances	• Hates to be alone
• Gets angry easily	• Needs to be center stage
• Seems phony to some	• Wants to be popular
• Never Grows Up	• Looks for credit
• Dominates conversations	• Answers for others
The Sanguine As A Parent	• Fickle and forgetful
• Interrupts and doesn't listen	• Makes excuses
• Keeps home in a frenzy	• Repeats stories
• Forgets children's appointments	
• Disorganized	
• Doesn't listen to the whole story	

The weaknesses of the sanguine temperament include the tendency toward superficiality, inconstancy, and sensuality because sanguine places such a high value on relationships and pleasing others, he often tempted to forsake what sanguine knows is right in order to fit in with the crowd (Bennet, 2005)

c. **The Phlegmatic Personality**

The Phlegmatic is the peaceful person who wants to stay out of trouble, keep life on an even plane and get along with everybody. Phlegmatic like to rest and show steadiness. Phlegmatic also a very calm and relaxed so that the phlegmatic is never seemed bothered, however the circumstance of their surroundings. The phlegmatic is hard to angry and rarely to vent his temper.

According to Florence Littauere, Marriage (after every wedding comes a marriage) The phlegmatic is peaceful person, born-follower, likes harmony and

rest, loves to relax, wants to calm people down, gets along with everyone, needs peace and sense of worth, has little self-motivation, gets depressed over conflict, controls by procrastination.

Bennet (2005) added that Phlegmatic are reserved, prudent, sensible, reflective, respectful, and dependable. They are not easily insulted or provoked to anger, nor they are given to exuberance or exaggeration in speech. They are loyal and committed, tolerant and supportive. They are also make excellent firefighters, police officers, and military officers; they excel in professions where being calm under pressure is key.

These are the explanation to the fundamental phlegmatic traits that should be considered in understanding the phlegmatic personality.

Blank	Worrier
Unenthusiastic	Timid
Reticent	Doubtful
Fearful	Indifferent
Indecisive	Mumbles
Uninvolved	Slow
Hesitant	Lazy
Plain	Sluggish
Aimless	Reluctant
Nonchalant	Compromising

The 20 traits above are still based on Florence Littauer. Through points, the phlegmatic personality can be observed simply. The following are some strengths of phlegmatic personality:

Table 2.3
Strengths of phlegmatic

Strengths of a Phlegmatic	
The Introvert The Watcher The Pessimist	
The Phlegmatic's Emotions	The Phlegmatic At Work
• Low-key personality	• Competent and steady
• Easygoing and relaxed	• Peaceful and agreeable
• Calm, cool and collected	• Has administrative ability
• Patient well balanced	• Mediates problems
• Consistent life	• Avoids conflicts
• Quiet but witty	• Good under pressure
• Sympathetic and kind	• Finds the easy way
• Keeps emotions hidden	The Phlegmatic As A Friend
• Happily reconciled to life	• Easy to get along with
• All-purpose person	• Inoffensive
• Pleasant and enjoyable	• Good listener
The Phlegmatic As A Parent	• Dry sense of humor
• Makes a good parent	• Enjoys watching people
• Takes time for the children	• Has many friends
• Is not in a hurry	• Has compassion and concern
• Can take the good with the bad	
• Doesn't get upset easily	

Phlegmatic are known for their easy-going nature. They possess a great deal of common sense and mental balance. They are excellent listeners and have great empathy for others. They are supportive friends, patient with difficult people and situations, and considerate at all times. On the job, the phlegmatic are dependable, punctual, and orderly; they can bring harmony to almost any group (Bennet, 2005).

Numerous traits below are the simple descriptions to know about the weaknesses of the phlegmatic personality. Florence Littaire mentioned that traits are:

Blank	Worrier
Unenthusiastic	Timid
Reticent	Doubtful
Fearful	Indifferent
Indecisive	Mumbles
Uninvolved	Slow
Hesitant	Lazy
Plain	Sluggish
Aimless	Reluctant
Nonchalant	Compromising

Table 2.4

Weaknesses of a phlegmatic

Weaknesses of a Phlegmatic	
The Phlegmatic's Emotions	The Phlegmatic At Work
• Unenthusiastic	• Not goal oriented
• Fearful and worried	• Lacks self motivation
• Indecisive	• Hard to get moving
• Avoids responsibility	• Resents being pushed
• Quiet will of iron	• Lazy and careless
• Selfish	• Discourages others
• Too shy and reticent	• Would rather watch
• Too compromising	The Phlegmatic As A Friend
• Self-righteous	• Stays uninvolved
	• Is not exciting
The Phlegmatic As A Parent	• Indifferent to plans
• Lax on discipline	• Judges others
• Doesn't organize home	• Dampens enthusiasm
• Takes life too easy	• Sarcastic and teasing

B. *Theoretical Framework*

Many definitions can be found about listening from some experts. But the researcher only chooses several of them which are important to talk about. Harry (1971) stated "Listening is the process of becoming aware of the sound components and recognizing these components in sequences which have meaning." Beside, listening involves more than just hearing or paying attention. It also involves thinking, language ability, and experiences which is essential for communication. Lundsteen has stated that "listening refers to the process by

which spoken language is converted to meaning in the mind.” It means that listening occurs if there is a voice, which is heard.

Roy O’Billet also stated that “Listening is more than just hearing. To listen is to hear, to understand, and to evaluate. Teacher commonly notices that some students do not hear and that others hear but do not understand and evaluate what the student says, and the teaching – learning process is thereby correspondingly retarded”. According to the first defining statement in Webster’s third new International Dictionary, “listening is to make a conscious effort to hear, attend closely, so as to hear or to pay close attention; take advice”.

Referring to the explanation above, the researcher concludes that listening is vital in the language, because it provides the process of thinking, language ability, and experiences that are essential in communicate to other. Without understanding input at the right level, any learning simply cannot begin. Listening is thus fundamental to pronunciation.

Based on the explanation, a good listener have to pay attention, listen to others with full concentration, a good listener should be projective and empathic and some research have found that the introvert one tend to be better performers in receptive skills like listening, reading, and structure, since according to Eysenck (1965) as cited in Hadidi (2015) “Introvert person generally have reflective and thoughtful personality type that suits the receptive kinds of task”. Another reason according Brown (1994) “claims that extroversion may be a factor in the development of general oral communicative competence, which require face to face interaction, but not in listening, reading, and writing”.

Kagan (1965) said that Impulsive children are get through tasks fast because they aren't concerned enough to take the time to avoid errors. And according to Schemeck (1988) impulsive learners like to answer the question quickly. They are risk taker and concern need with speaking fluently, so make more mistakes. Impulsive is one of the characteristics of sanguine personality, while in the process of listening to a student must be concentrated, pay attention to the speaker and understand what speaker saying not just answer question quickly, able to listen to the instructions, and must be patient.

However, many researchers found that there is no correlation between personality and listening. Karbalaei (2008) conducted a study on the relationships between extroversion/ introversion personality variables and EFL learners' performance on listening strategies. The results showed that extroversion/introversion personality trait had no significant effect on EFL learners' use of listening strategies. Erton (2010) investigated the relationship of different personality types, extroverts and introverts, with students' different learning styles. The findings showed that each personality group (extroverts/introverts) has different learning styles. Although the tendencies are different, the success of these students did not show any significant differences.

There are also researchers found that the extroverts are better than introverts, and these study are contradict to the results of previous studies. Nasrabadi (1996) examined the role of extroversion-introversion personality dimension in EFL listening comprehension in Iran. He found significant results for extroverts. And Daneshvari (1996) also examined the role of E/I in

EFL listening comprehension in Iran. He concluded that extroverts were better listening strategy users in comparison with introverts. The researcher can not assume which one is better between sanguine and phlegmatic. But the researcher interested in conducting research in order to determine whether the personality effect on student listening achievement or not. And if personality affects the achievement of student listening, which personality will get higher listening score.

C. Hypothesis

H0 = There is no significant difference between sanguine and phlegmatic students' in listening achievement.

H1 = There is a significant difference between sanguine and phlegmatic students' in listening achievement.

CHAPTER III

RESEARCH METHOD

A. *Research Method*

1. Research Design

The researcher used comparative method which aims to comparing students' personality in their listening skill. According to Sugiyono (2014), comparative study is a study which compares a phenomena, an event, a symptom between one population or sample and another sample, or between one certain time and another time by using either quantitative or qualitative data. The researcher used *expost-facto design* because there was no treatment, but collecting the data to see the effect of students' personality towards their listening skill.

2. Research Variable

This research had two variables; they were dependent variable and independent variable. The independent variable of this research was Sanguine students (X1) and Phlegmatic student (X2), while the dependent one was students' score on Listening test (Y).

B. *Population and Sample*

1. Population

The population of this research was the third class of MAN 1 Makassar Which consist of 237 students. The researcher chose the third class as it was a recommendation from English teacher in MAN 1 Makassar.

2. Sample

The class of XII MIA 1- XII MIA 3 was chosen as the sample of this research. The total of the sample was 82 students. In this research, the researcher applied purposive sampling. The students were divided into four personality, and then the researcher found the students with the sanguine personality and the phlegmatic personality.

C. *Research Instrument*

This research used personality test which was taken from a standardized test in Personality Plus written by Florence Littauer as questionnaires and was held for 30 minutes to know which one the sanguine students and the phlegmatic students. To know students' listening score, the researcher provided 15 multiple-choice questions in the listening test and it was held for 30 minutes.

D. *Data Collecting Procedure*

In collecting the data, the researcher used procedures as follows:

1. The first, the researcher took 10 minutes to explained how to fill the questionnaire and multiple choice listening test.
2. The second, the researcher gave the students listening test which consist 15 multiple choice questions and gave 30 minutes to finished the listening test.
3. The third, the researcher gave 30 minutes to finish the questionnaire which conclude the personality test, 20 strenghts and 20 weaknesses.

4. The fifth, the researcher separated the personality into sanguine, phlegmatic, melancholy, and choleric personality. The melancholy and the choleric personality was eliminated.
5. Finally, the researcher compared the listening score of sanguine and phlegmatic personality.

E. *Data Analysis Technique*

1. Scoring with a correction of the multiple choice answers to obtain a score of students with scoring technique is used the following formula:

$$\text{Score} = \frac{\text{Students' correct answer}}{\text{Total number of item}} \times 100$$

(Sudjana in Jusran, 2013: 30)

2. To calculate the students' mean score, the researcher will use this

formula: $\bar{X} = \frac{\sum X}{N}$

Notation:

\bar{X} = the mean or arithmetic average of the score

$\sum X$ = the sum of all score

N = the total number of subject

3. To find out the significant difference between sanguine and phlegmatic students in listening achievement, the researcher will calculate the value with t-test.

$$t = \frac{X_1 - X_2}{\sqrt{\frac{(n_1 - 1) s_1^2 + (n_2 - 1) s_2^2}{n_1 + n_2 - 2} \left(\frac{1}{n_1} + \frac{1}{n_2} \right)}}$$

Where:

t = Test of significance

X_1 = Mean scores of sanguine students

X_2 = Mean scores of phlegmatic students

s_1^2 = The sum of squared of sanguine students

s_2^2 = The sum of squared of phlegmatic students

n_1 = the score listening test of sanguine students

n_2 = the score listening test of phlegmatic students

(Sugiyono, 2015)

CHAPTER IV

FINDING AND DISCUSSION

This chapter described the finding and the discussion of this research. In the finding section, the researcher showed all the data which collected during the research. In the discussion section, the researcher analyzed and discussed all the data in the finding section.

A. *Findings*

1. Listening Scores of Sanguine Students

The scores of the third grade students of MAN 1 Makassar class XII MIA 1 – XII MIA 3 who took listening test could be seen in the appendix. From the table 23 students are the sanguine and 30 students are the phlegmatic students. From the total number of the third grade students, only 83 students who participated to fill the questionnaire of personality test. The other 30 students belong to the other personalities; they are neither the sanguine students nor the phlegmatic students.

2. Data Analysis

To begin the data analysis, the first step was finding the average of the sanguine and phlegmatic students. The way to find the average of the sanguine and phlegmatic students' score is by the following calculation. The average in statistics is known as mean (M). The pattern of Mean score was:

$$\bar{X} = \frac{\sum fx}{N}$$

Description:

f_x : the total of students' scores

N : a number of students

This pattern was to find the Mean score from single data of which scores were more than one frequency; whether they are for some data or whole of them. The calculation for x_1 or the sanguine students was:

$$\bar{X} = \frac{\sum fx_1}{N}$$

$$\bar{X} = \frac{1238}{23}$$

$$\bar{X} = 53.82$$

After having the first Mean score, and the next step was forward to the second Mean. It was for the phlegmatic students. The calculation was as follows:

$$\bar{X} = \frac{\sum fx_2}{N}$$

$$\bar{X} = \frac{1821}{30}$$

$$\bar{X} = 60.7$$

The Next step was finding the Standard Deviation of the sanguine and the phlegmatic students.

Standard Deviation of sanguine students was as follows:

$$SDX1 = \sqrt{\frac{\sum(X1-\bar{X})^2}{N1-1}} = \sqrt{\frac{3067.31}{23-1}} = \sqrt{\frac{3067.31}{22}} = \sqrt{139.42} = \mathbf{11.80}$$

Standard Deviation of phlegmatic students is was follows:

$$SDX2 = \sqrt{\frac{\sum(X2-\bar{X})^2}{N2-1}} = \sqrt{\frac{3236.3}{30-1}} = \sqrt{\frac{3236.3}{29}} = \sqrt{111.59} = \mathbf{10.56}$$

The next table conclude the result of the calculation above:

Table 4.1

The Statistic Descriptive of the Research

Statistic	Sanguine Students	Phlegmatic Students
The Highest Score	80	80
The Lowest Score	40	40
Mean	53.82	60.7
Standard Deviaton	11.80	10.56

Based on the **table 4.1**, there were differences in the result of the Mean score and Standard Deviation. The Phlegmatic students were fine superior of 6.88 on Mean score but Sanguine students were fine superior 1.24 on Standard Deviation.

After analyzing the data and counting the formula, the researcher it has been found the result of the Mean score and the Standard Deviation of students Listening score from both personality and finally gave interpretation (t test).

a) T Test

To find out the significant difference between sanguine and phlegmatic students on students listening scores, the researcher calculated the t-test with *SPSS Version 16*:

Table 4.2
Independent Samples Test

		Levene's Test for Equality of Variances		t-test for Equality of Means						
		F	Sig.	T	Df	Sig. (2-tailed)	Mean Difference	Std. Error Difference	95% Confidence Interval of the Difference	
									Lower	Upper
Listening_Scores	Equal variances assumed	.634	.430	2.231	51	.030	6.87391	3.08122	-13.05972	-.68810
	Equal variances not assumed			2.198	44.557	.033	6.87391	3.12758	-13.17491	-.57291

After calculated the data, the researcher found out that the t-test value = -2.231. Next, the t-table value with significance $\alpha = 0,05$ was calculated. The researcher looked for the t-table in -t distribution with $db = n-2 = 83-2 = 81$. So, $t(\alpha, db) = t(0,05,81) = 1.98$. To prove the hypothesis, the data which obtained from both of personalities was calculated by using the t-test formula with the assumption as follows:

T test > t table: The alternative hypothesis (H_1) is accepted and the null hypothesis (H_0) is rejected. It means there is significance difference between the sanguine students and the phlegmatic student on their listening scores.

T test < t table: The alternative hypothesis (H_1) is rejected and the null hypothesis (H_0) is accepted. It means there is no significance difference between the sanguine and the phlegmatic students on their listening scores.

Based on the calculation above, it was known that t-test = -2.231 and t-table = 1.98. Because $t_{test} < t_{table}$ (-2.231 < 1.98) it can be concluded that H_0 was accepted. So there was no significant difference between sanguine and phlegmatic on students listening scores of MAN 1 Makassar.

B. *Discussions*

Based on the findings, the researcher found that the phlegmatic students had better score in listening than sanguine students, but the differences of the listening score were not too significant. So the null hypothesis (H_0) was accepted and the alternative hypothesis (H_1) was rejected. It can be interpreted that there was no significance difference between the sanguine students and the phlegmatic students on their listening score. This findings is in accordance with Jhonson (2001) who stated that there was no correlation between personality and the success of language learning. Nasrabadi (1996) examined the role of extroversion-introversion personality dimension in EFL listening comprehension in Iran and he found significant results for extroverts. Daneshvari (1996) also examined the role of E/I in EFL listening comprehension in Iran. He concluded that extroverts were better listening strategy users in comparison with introverts.

This quantitative research seems to break theory on the concept of personality that the phlegmatic is better than the sanguine in listening. According to Eysenck (1965) as cited in Hadidi (2015) "Introvert person generally have reflective and thoughtful personality type that suits the receptive kinds of task". The phlegmatic students are assumed to have a good ability and better ability in listening. While, the sanguine students were estimated to be people who have less ability in listening than phlegmatic students. Chamorro et.al (2003a,b) conducted a study to investigate the relationship between personality traits and academic performance in three longitudinal studies of two British university samples. Additionally, indicators such as attendance, tutorials,

etc. were also studied in relation to the personality traits. The results showed that personality was significantly related to academic performance.

On the comprehensive study of cognitive and personality traits and their effects on second language learning, Naiman et al. (1978) concluded that there was no significant correlation between extroversion and successful second language acquisition among the high school French students who were the subjects of their research. The results of that study indicate that the personality of students had not influence the listening skill. And Scheibner-Herzig (1984) did not find any significant correlation between extroversion and the second language performance in English of West German high school students. In current literature there is still no robust evidence to prove that a particular personality trait could be a predictor of successful on second language learning. Both extraversion and introversion for instance may produce positive effects on second language learning depending on a particular task involved.

CHAPTER V

CONCLUSION AND SUGGESTION

A. *Conclusion*

This research showed that there was no significant different between sanguine and phlegmatic student in their achievement in listening skill. The data interpreted that the sanguine students and phlegmatic students had no difference in their speaking score achievement. Even though the phlegmatic students had higher average in listening score and the phlegmatic students had lower average in listening score, the t-test calculation showed that there was no significant difference between the students with sanguine and phlegmatic personality in their listening score.

B. *Suggestion*

Every students have their own characteristics which was influence on the way they learn a language. The teacher should help the students who face the difficulty in learning some skills without differentiate the students based on their personality. English teacher should give more attention both of extrovert students and introvert students in teaching listening. For teachers, such awareness will also have beneficial effects on the selection of appropriate teaching methodology and the recognition of individual differences.

The possibility of error in this research may be highlighted from the decision taking while the students are doing the personality test and there is also possibility of inappropriateness on giving score which influenced by the students; they might not show their best ability in English listening performance at the

time. The next researcher should pay attention to the students while they fill the questionnaire.

Appendix 1

NAME :
CLASS :

LISTENING SECTION

In this section of the test, you will have the chance how well you understand spoken English. There are four parts to this section with special directions for each part.

Part I
Questions 1 to 4

Directions:

In this part of the test, you will hear some dialogues and questions spoken in English. The questions and the dialogues will be spoken twice. They will not be printed in your test book, so you must listen

carefully to understand what the speakers are saying. After you listen to the dialogue and the question about it, read the five possible answers, and decide which one would be the best answer to the question you have heard. Now listen to a sample question.

You will hear:

Man: I highly appreciate you for helping me choose the right loan I need.

Woman: My pleasure, Sir. I hope you can use the money to buy your dream house.

Sample answer

A	B	C	D	E
---	---	---	---	---

Narrator: What is the topic of the conversation?

- A. Asking for help
- B. Giving opinion
- C. Giving direction
- D. Expressing pleasure
- E. Expressing gratitude

Narrator: the best answer to the question “what is the topic of the conversation?” is the “Expressing gratitude.” Therefore you should answer (E).

1. A. She lost her kitty
- B. Her kitty was dead
- C. She could get a kitty
- D. She did not have a pet animal
- E. She was not allowed to get a kitty

2. A. The man felt happy to meet the woman
 B. The woman got a better position in the office
 C. The woman moved to a new bank in a Samarinda

UNIVERSITAS ISLAM NEGERI

Part II

Questions 5 to 7

Directions:

In this part of the test, you will hear some incomplete dialogues spoken in English, followed by four responses, also spoken in English. The dialogues and the responses will be spoken twice. They will not be printed in your test book, so you must listen carefully to understand what the speakers are saying. You have to choose the best response to each question. Now listen to a sample question.

Girls: I really made a mistake .

Boy: What about?.

Girls: I have broken your pen.

Boy: that pen? Oh no.

Girl: _____.

Sample answer

A	B	C	D	E
---	---	---	---	---

Narrator: What does the girl probably respond?

A. I'm sorry to hear that

- B. I really appreciate it
- C. I do apologize
- D. I love that pen

Narrator: The best answer to the question “What does the girl probably respond?” is “I do apologize.” Therefore, you should choose answer (C).

5. Mark your answer on your answer sheet.

- A
- B
- C
- D

6. Mark your answer on your answer sheet.

- A
- B
- C
- D

7. Mark your answer on your answer sheet.

- A
- B
- C
- D

Part III
Questions 8 to 11

Directions:

In this part of the test, you will hear some dialogues or monologues spoken in English. The dialogues or monologues will be spoken twice. They will not be printed in your test book, so you must listen carefully to understand what the speakers are saying. After you listen to the dialogue or monologue, look at the five pictures provided in your test book, and decide which one would be the most suitable with the dialogue or monologue you have heard.

8. A. 1
 B. 2
 C. 3
 D. 4
 E. 5
