## PERSETUJUAN PEMBIMBING

Pembimbing penulisan skripsi saudara Hartina, NIM: 20400114030, mahasiswa jurusan pendidikan Bahasa Inggris pada Fakultas Tarbiyah UIN Alauddin Makassar, setelah dengan seksama mencliti dan mengoreksi skripsi yang bersangkutan dengan judul, "*Phonetic Analysis of English Segmental Sounds Produced by The Students of English Education Department at UIN Alauddin Makassar*", memandang bahwa skripsi telah memenuhi syarat-syarat ilmiah dan dapat disetujui untuk diajukan ke sidang *munaqasah*.

Demikian persetujuan untuk proses selanjutnya.

Makassar, September 2018

#### ACKNOWLEDGMENTS

By reciting Bismillahi Rahmani Rahim, the researcher would like to express and say his deepest gratitude to the Almighty, the merciful lord Allah SWT for blessing upon him in the form of inspiration, love, mercy, guidance and most of all, to finish this thesis. Shalawat and Salam are addressed to beloved chosen messenger Prophet Muhammad SAW who had changed and brought the human being from the idiotic time to the worthy and blessing time.

In finishing this thesis, many problems, difficulties and challenges had been encountered. Those would not have been solved without help, motivation, support, critic, and any advices from many people around the researcher. Therefore, the researcher would like to express proudly his sincere gratitude and appreciation to all of them as follows: UNIVERSITAS ISLAM NEGERI

- 1. The researcher's lovely parent, **H. Abd. Rahim** and **Hj. Nurhayati**, for their love, sacrifices, affections, advices and prays during his study. And also to his sister who always helps him to face problems during his study in Makassar.
- Prof. Dr. H. Musafir Pababbari, M.Ag., the Rector of Alauddin State Islamic University of Makassar.
- Dr. H. Muh. Amri, LC., the Dean of Tarbiyah and Teaching Science Faculty of UIN Alauddin Makassar.

- 4. Dr. Kamsinah, M.Pd.I., the Head of English Education Department and Sitti Nurpahmi, S.Pd., M.Pd. the secretary of English Education Department of Tarbiyah and Teaching Science Faculty of UIN Alauddin Makassar as well as all the staff.
- 5. Dr. H. Nur Asik, M.Hum.\_as the first consultant and Dr. A. Kaharuddin, S.I.P., M.Hum.. as the second consultant. Thanks for giving her valuable time and patience, advice, support her during the assistance, and guided her in completing the thesis.
- Dr. Hj. Djuwairiah Ahmad, M.Pd., M.TESOL as the first examiner and Dr. Hj. Mardiana, M.Hum as my second examiner. Thank you for giving much suggestions and guiding her to complete this thesis.
- 7. All her siblings. Her first brother Riyadi Hamda and his wife Emi Jayanti. Her second brother Muh. Agim Nastiar who always motivate and suggest her for doing the research and completing the thesis and also her little nephew Hiro Hamada and Chester Bennington thanks for being her mood booster.
- All her friends in English Education Department (2014) especially in group 1 and 2 (PBI 1&2). It cannot be mentioned one by one but overall thanks for your friendship, laugh, togetherness and support for her.
- 9. The last but not least, her best friends (Jomblo Squad) Vira Vebridaya, Nurul Hakimah Hafid, Marliana UB, Utari Muhdar, Rismawati, Nurdevitasyari, Ainun Inayah and Ainul Bayani Asdar for their supporting, caring, helping, laughing, and be the place for sharing.

- 10. Subjects of the research, The ten students of English Education of UTN Alauddin Makassar intake 2015 (PBI 1&2). The writer expresses gratitude for them for their available time for the sake of the success of the study conducted.
- Finally, for everyone connected with the complement of the thesis may Allah SWT. bless us. Aunutn Yaa Rabbal Alamitn.

Ultimately, the writer realizes that this thesis is far from being perfect; therefore, corrections, suggestions, comments, and criticisms will be fully appreciated for the improvement of this writing. Finally, gladly the writer prays; may all the efforts and pains get endless blessings from Allah S.W.T.

Aamiin Ya Allah

Makassar, 19 September 2018

The Researcher UNIVERSITAS ISLAM MEGERI Hartina ALAUD NTM. 20400114030 MAKASSAR

#### ABSTRACT

Researcher	: Hartina
Reg. Number	: 20400114030
Title	: Phonetic Analysis of English Segmental Sounds Produced by The Students of English Education Department at UIN Alauddin Makassar

Difficulties in producing natural English sounds seem to be inevitable to Indonesian learners of English. It occurs due to the fact that some of English sounds do not exist in the mother tongue of the learners which has resulted in unnatural pronunciation. This paper addresses the issue of English sound production with special attention to segmental sounds produced by students of English Education Department at UIN Alauddin Makassar. Descriptive method was used to carry out this study with the support from two data collection instruments i.e. picture description task and interview.

The findings of this study showed two things i.e. The first; an in-depth phonetic analysis of the students' sounds production in terms of place of articulation, manner of articulation as well as distinctive features for the production of English consonant sounds, and openness of the mouth, tongue elevation, position of tongue elevation, lips' shapes, as well as length of vocalization for the production of English vowel sounds. The second; detailed explanation about contributory factors to the production of segmental sounds quality in terms of unnatural performance and unnatural competence.

The findings of this research found that the most to least frequent unnatural sounds produced by the student occurred in [ð] voiced dental fricative (38.15%) for consonant sound and [æ] Lax Low Front Unrounded (38.46%) for vowel sound. The finding of causal factors was found in this research were the unnatural sound occurred potentially because of mother tongue interference and less practice. Both were indicators of unnatural performance. AKASSAR

Keywords: phonetic analysis, English segmental sounds, English consonant sounds, English vowel sounds.

M

#### **CHAPTER I**

#### **INTRODUCTION**

#### A. Background

A number of languages have been learnt in Indonesia such as English, Arabic, Japanese, and Korean etc. English is the only foreign language which has dominated foreign language education. The domination of English is made affected by the Government, Act of The Republic of Indonesia on National Education System No. 020/2003, and Article 37 which states that English is the only foreign language which is taught and learned as compulsory subject from primary school level to university level. The need for learning English has been increasingly recognized during recent years. English has brought great advantages to education because it provides the students with access to global information and knowledge of science and technology. It is used as an instructional language in many formal and non-formal educational institutions.

In the university level, the government has stipulated that the University curriculum in Indonesia consists of core and institutional curricula (Decree of Minister of National Education NO. 045 / U / 2002). The curriculum of the Sarjana Degree (S1) program ranges from 40-80% of the total number of credits from a study program. The core curriculum is set nationally by the Minister of National Education, while the institutional curriculum is determined by each university. UIN Alauddin Makassar is one of the Universities in Indonesia whose English subject must be learnt by the students according to Institutional

curriculum. Abd. Hakim Y. and Kaharuddin (2018) states the existence of English in institutional curriculum is stated in the decree No. 045/U/2002, paragraph 2, article 10 specifying that institutional curriculum could include Indonesian, English Basic Natural Science, Philosophy of science, physical education, etc.

The teaching of English in UIN Alauddin Makassar is distinguished as a general course for non-English students and English as major. As a general course, English is one of the tools to develop the field of non-English study that has taken learnt by the students. Meanwhile, there is only one semester. While as a major, English becomes the subject of study that the students should study. Students of English Education Department learn English as a field of study and they have to master it in depth.

Some aspects are learnt by the students in English Education Department. Firstly, the aspect of science, this aspect concerns with the application of linguistics. Linguistics is defined as the scientific way of studying language, both languange in general and languange particular (Crystal, 1982: 27). Secondly, the aspect of methodology is what method they use in teaching English. Thirdly, the aspect of skill, it is divided into; listening, reading, speaking, and writing.

Three aspects require pronouncing English segmental sounds correctly. English segmental sounds here refer to the way consonant and vowels sounds are produced regarding phonetic aspects. Segmental features are important to learn because it helps us to know about the theory of phonetics especially English phonetics. According to L. Ben Crane and friends (1981) Phonetics is the study of sounds that occour in language. On the other hand, Students still pronounced sounds unnatural..

In the specific case, the problem also happens to the students of English Education Department at UIN Alauddin Makassar. The inability of students pronounces the segmental sounds not only consonant but also vowel sounds. The students is regarded had experiences in learning English for many years from elementary school to university. Even, they have learnt phonetics in the college but they still have problems in producing English segmental sounds. Some students cannot pronounce correctly, sometimes in one of presentation, answering, or giving opinion they pronounce unnatural words. Learners pronounce unnatural English sounds as Djajaningrat (2011) states, "As consequence of all the difficulties provided by the English pronunciation, many English language learners as well as the Indonesian learners tend to generate incorrect sounds in the articulation of the sounds". This conditions need attention, because they are English learners, further they will be English teachers, hence if teacher neglect it, what they said cannot be understood by listeners.

The problem of producing sounds seems complicated. Even if the students have been learning English for many years, their English proficiency is still low. Their proficiency can be seen in two situations. Firstly, some students are unable to communicate in English. Some speakers are likely to pronounce the initial sound [ $\theta$ ] in the word *thank* [ $\theta$ æŋk] as *tank* [tæŋk]. It causes misunderstanding

because *thank* is different from *tank*, and both these words have different meanings. Secondly, some are able to communicate, but their English Sounds odd and unnatural. It often make students unable to interact socially with native English speakers by the reason of their unnatural English. We usually find English words that end with /l/ and /p/ serially, such in words *help* and *pulp* but those words are never found in Indonesian. Most of Indonesian people cannot say these words and often they insert a vowel so that it's pronounced */helep/* and */pulep/*.

This research is expected to provide benefits for the study of linguistics development, especially in the field of phonetics. Through this research, it is hoped the sounds that is often pronounced correctly by the students and the factors of the unnatural sounds can be used as a reference to overcome the students' unnatural sounds. Having a good pronunciation of the language can help in normal communication, particularly intelligibility (Derwing and Munro, 2005 as cited in Nation and Newton, 2009). Moreover, this research is expected to be useful for both of teachers and English learners so that they can do teaching and learning activities and teach the language better. If the factors of the incorrect English sounds are known, the direction of teaching and learning is expected to be clearer, the learning method becomes more effective, and English proficiency of teachers or students, especially at the phonetically level, gets better. Therefore, this research was conducted to find out factors of the correct

and incorrect English segmental sounds produced by the students, in order to develop teacher strategy to increase students' ability.

Therefore, the researcher conducted a research entitled, "Phonetic Analysis of English Segmental Sounds Produced by The Students of English Education Department at UIN Alauddin Makassar"

**B.** Research Problems

Here, there are some research problems formulated by the researcher as follows:

- How do the students of English Education Department at UIN Alauddin Makassar produce English segmental sounds?
- 2. What factors are involved in the students' segmental sound production?

## C. Research Objectives

In the line with the research problems above, these objectives of the research are described as follows: AS ISLAM NEGERI

- To identify the specific sounds that commonly unnatural in English segmental sounds produced by the students of English Education Department at UIN Alauddin Makassar.
- To find out factors of the unnatural in English segmental sounds that produced by the students of English Education Department at UIN Alauddin Makassar.

#### **D.** Research Significance

The results of this research gave a significant contribution in terms of theoretical and practical as follow :

1. Theoritical Significance

Theories of Phonetics are expected to help the students to get better undestanding about the general mechanism of producing English segmental sounds by means of the speech organs as well as to differentiate among those sounds. It is also expected to the students who learn English as a foreign language about the important to learn phonetic and sound symbols in English and try to pronounce it correctly. The incorrect English sounds phoneticly influenced the meaning of language.

- 2. Practical Significance
- a. For the students

Students are expected to recognize their English sounds produced unnatural, so they are careful with those words and do not rehearse again. Therefore, they can pay attention how to correct pronounce when they are speaking English. In studying English, the correct sound productions make them easy to give the meaning of their speech. So, it cannot break communication between speaker and listener.

#### b. For the Lecturer

This research is expected to be useful for English lecturer to improve their teaching phonetic. In addition, knowing the students' unnatural English sounds can help them to solve their problem especially in English segmental sounds. Lecturer can determine the appropriate strategies or techniques in teaching particularly where the students do incorrect english sounds.

c. For the other researchers

The finding of this research is used as a reference for other researchers who carried out the same topic, although in different aspect from this study.

#### E. Research Scope

This research was limited to analyze the segmental features of American English sounds. The segmental sounds were consonant and vowel sounds. In addition, the subject was the students of English Education Department intake 2015 at UIN Alauddin Makassar. TAS ISLAM NEGERI

> ALAUDDIN MAKASSAR

#### **CHAPTER II**

#### **REVIEW RELATED LITERATURE**

#### A. Previous Related Research Findings

Related to this research, there were some previous studies. Here the researcher presents three of the studies. Those are presented below:

Faishol Hadi (2015) An Analysis of ESL Students' Segmental Phonemes in Pronunciation Class. This study is about an analysis of students' difficulty in pronouncing English segmental phonemes, particularly in pronunciation class context. The participants of this study were ten students of English Department of Al Hikmah Teacher Institute which has accomplished pronunciation practice course. This study was qualitative research. The data were collected by observation, interviews and recording. Students' recording was analyzed to get the data why they face difficulty in producing several English segmental phonemes. According to the data analysis, the differences segmental phonemes between English and Bahasa Indonesia cause students' difficulty in pronouncing several English segmental phonemes.

Salwa Chaira (2014) Interference Of First Language In Pronunciation Of English Segmental Sounds (A Case Study In Darul Ulum Islamic Boarding School Banda Aceh). This research is aimed to investigate the interference that occurs in Darul Ulum students' English speaking since the reality shows that the students mispronounce some consonant and vowel sounds of English. This phenomenon occurs because the students are required to constantly apply English in any circumstances. When they are unfamiliar and attempt to pronounce new words without prior knowledge of how to sound them correctly, they may produce errors even fossilize them. Thus, the teachers are recommended to halt the errors production and direct them to correct pronunciation. This research focuses on investigating the Interlingua errors the students produced as the result of the interference and finding solutions of how to avoid the Interlingua errors through the methods applied by their teachers. To reach such purpose, the writer applied a subsequent process method by collecting the data on the field, selecting the required samples, classifying into the sound classification, comparing the taken samples from English pronunciation using phonetic transcription, analyzing the data using phonological theories. Here are the mispronounced sounds resulted from the interference; [ph], [th], [kh], [f] for grapheme "ph", [v],  $[\theta]$ ,  $[\delta]$ , [z] for grapheme "s", [f], [ks] for grapheme "x", [i:], [u:], [æ], and [e]. Therefore, teachers are recommended to apply Audio-lingual Method, Phonetic Method, pronunciation drill, Behaviorist Learning Theories (sound imitating), and Phonic-based Approach to improve the pronunciation of the consonant and vowel sounds. Through this language research, the teachers will definitely recognize of how to sound all English consonant and vowel sounds correctly. Therefore, they are recommended to implement the given methods to have their students correctly pronounce the sounds in order to avoid the intralingual errors caused by the interference of their L1.

Faizal Risdianto (2017) A Phonological Analysis on the English Consonants of Sundanese EFL Speakers. This descriptive qualitative study focuses on the description of the English consonants systems spoken by speakers of Sundanese backgrounds. This implies that such speakers of particular regional backgrounds speak unique and idiosyncratic native languages. This study will provide a description on the consonants production of English as Foreign Language (EFL) speakers with Sundanese native language in an experimental phonetic method to the students of Islamic Education Department of State Institute for Islamic Studies Salatiga. In this study, the writer have two objectives: (1) to know the English consonants systems of EFL Sundanese speakers in Islamic Education Department of State Institute for Islamic Studies Salatiga? and (2) to know the most frequent errors on pronouncing English consonants produced by EFL Sundanese speakers. From the result of the analysis, it can be seen that the EFL Sundanese students made 262 errors. It can also been seen that the greatest errors made by the EFL Sundanese students are mispronouncing the minimal pairs of /f/ and /v/, /s/ and / $\Theta$ / and / $\delta$ / and /z/. The misuse of the sound "p" instead of "b" is common error for Sundanese since there is not distinction between the sound "f", "v" and "p" in sundanese phonological system.

Anggi Kharismayuda Guntari (2013) Sundanese Students' Production Of English Dental Fricative Consonant Sounds. This research attempts to investigate the production of English dental fricative sounds by Sundanese students of Universitas Gadjah Mada. It aims to investigate the level of acceptability and to find out the possible factors which influence their production of these sounds. 700 sentences containing the four dental fricative consonants were obtained and used as the data of the research. The students' production of the four consonants was then assessed by a native speaker of English for their acceptability. The results of this research show that the acceptability level as judged by the informant of the students' production of the dental fricative sounds is low, only 13.80% on average. The highest acceptability is in the sound [f] with 45.56%. The second highest acceptability is in the sound [v] which is scored 5%. It is followed by the sound [0] which is scored 2.78%, and the sound  $[\delta]$  with 1.88%. In general, the production of the dental fricative sounds produced by Sundanese students is judged as not clear by the native speaker.

In conclusion these previous findings, the researcher found similarities and differences. The similarities among this research and other previous studies are they have same purpose to analyze English Segmental Sounds either consonant or vowel sounds. The differences are for the first previous study he just focuses on the the difficulty in producing English segmental sound, the second previous study she focuses on the inference students in English Segmental Sounds, and the third and four previous study focuses on only consonant sounds.

#### **B.** Some Basic Concepts

1. Phonetics

A claimed by Ladefoged (1982:1) Phonetics is concerned with describing the speech sounds that occur in language in the word. Hamann and Schmitz (2005:3) states that Phonetics is concerned with how sounds are produced, transmitted and perceived (we only looked at the production of sounds). Those theories tell about the process occur in producing sounds by the speaker and how the listener can understand those speech sounds. In simplicity, phonetics is the the study of sounds of language produced by human.

2. Analysis

Meduna (2005:1) states analysis is an intellectual or material whole into its constituent parts for individual study. Analysis begins with identification of the themes emerging from the raw data, process sometimes referred as "open coding (Strauss and Corbin, 1990)

In this case, phonetic analysis is the identification of the ability of the students in producing English segmental sounds and to see what kinds of sounds they can articulate natural and unnatural.

In the opinion of Kaharuddin and Ismail (2017:146) analysis refers to four systematic steps i.e. collecting, identifying, classifying and explaining.

#### a. Collection phase

This step refers to the process of gathering and selecting materials on spoken discourse to be analyzed for sake of getting required and relevant information.

b. Identification phase

In this step, identification refers to process of recognizing and naming. In phonetic analysis, identifying the data whether natural or unnatural sounds.

c. Classification Phase

After identifying, the next step is classification. This step refers to putting the data that had been identified into some categories. On the other hand the data are grouped into a table.

d. Explanation Phase

The last step refers to the process of making the result of analysis clear by telling relevant component.

3. English Segmental Sounds

On the report of Roach (1983: 34) when we speak, we produce a continuous stream of sound, the small pieces of this stream call segments. As stated by Coniam (2002) segmental sound is relatively more easily explained and taught than the supra-segmental features, some studies focus on studying segmental phonology in preference to supra-segmental features. As maintained by Ladefoged (1982) vowel and consonants can be thought of as the segment of which speech is composed. Based on the theories, it can be concluded that English Segmental sounds are divided in two main categories, those are vowels and consonants.Vlack (2004: 11) states vowels are always voiced sounds and they are produced with the vocal cords in vibration, while consonants may be either voiced or unvoiced. Those alphabets consist of the vowel and consonant

which have differences sounds to each other based on the manner and the places of articulation. The differences of vowel and consonant can be described as follows:

a. Consonants

Yoshida (2018) states consonants are sounds in which the air stream meets some obstacles in the mouth on its way up from the lungs. There are 24 consonant sounds; [p], [b], [t], [d], [k], [g], [tʃ], [dʒ], [f], [v], [ $\theta$ ], [ð], [s], [z], [ʃ], [ʒ], [h], [m], [n], [ŋ], [1], [r], [j], [w]. These 24 consonant are classified in terms of place of articulation, manner of articulation as well as distinctive features. In concert with Kaharuddin and Djuwairiah (2018: 41), there are three types of information connected to the production of English consonant sounds:

1) The place of articulation

The place of articulation means the location in the mouth produced consonant sounds. The location in the mouth refers to speech organ. The speech organ is used in producing consonant sounds i.e. lips, tongue, teeth, alveolar ridge, and palate. If we classify them according to the place which it articulate, we distinguish eight main classes:

a) Bilabial

Consonant sounds which are produced by putting two lips together, e.g. [b], [p], [m.

b) Labio-dental

Consonant sounds which are produced by contacting the lower lip and upper teeth, e.g. [f], [v].

c) Dental

Consonant sounds are produced when tongue tip for sounds  $[\theta]$  or tongue blade for sounds  $[\delta]$  contacts upper teeth.

d) Alveolar

Consonant sounds are produced when the tongue tip contacts the alveolar ridge, e.g. [t], [d], [1], [n], [s], anad [z].

e) Palatal

Consonant sounds are produced when the blade of the tongue touches the hard palate, e.g. [dʒ], [tʃ], [j].

f) Palate-Alveolar

Consonant sounds are produced when the tip the blade of the tongue approaches or touches the alveolar ridge and the main body of the tongue approaches the hard palate in the mouth, e.g.[3], [ʃ], [r].

g) Velar

Consonant sounds are produced when the back of tongue touches the soft palate, e.g. [k], [g], and [ŋ].

h) Glottal

Consonant sounds are produced when the flow of air stopped by the glottis with some construction of the glottis closing, and then released, e.g. [h].

i) Labiovelar

Consonant sounds are produced when the back tongue contacts the soft palate and lips and also come close each other e.g. [w]

2) Manner of articulation

If we classify consonants according to the manner in which the organs articulates them, we distinguish six main classes:

a) Stops or Plosives

Consonant sounds are produced by closing the speech organs both oral and nasal cavity that airstream is blocked, e.g.: [p], [b], [t], [d], [k], and [g].

b) Fricative

Consonant sounds are produced by blocking the airstream in the mouth, but not making closure, e.g. [f], [v], [ $\theta$ ], [ $\delta$ ], [s], [z], [3], [ $\int$ ], [h].

#### c) Affricatives

Consonant sounds are produced by blocking the airstream briefly with the UNIVERSITAS ISLAM NEGERI tongue in the mouth, but in contrast to stop, the blocked airstream is suddenly not released, but is slowly released and causes audible friction, e.g.: [tʃ] and [dʒ].

d) Nasals

Consonant sounds are produced by blocking the airstream pass through oral cavity using soft palate and the back of the tongue, so that the air can only pass through the nasal cavity, e.g.: [m], [n], and [ŋ].

e) Lateral

Consonant sounds produced by contacting the tip of the tongue onto alveolar ridge so that the air passes through both sides of the tongue, e.g.: [1].

f) Approximant (Glides)

Consonant sounds are produced by making the articulators interact the tongue and the alveolar ridge without actually touching, e.g.: [w], and [j].

3) Distinctive Feature

As claimed by Ruben (2014) all segments are defined by their acoustic and articulatory properties. These properties are their features. Since these features are the smallest phonological constituents that can distinguish wordthey are called distinctive features.

In this case, the researcher focuss on the voiced feature. One of the features can distinguish the phoneme is voiced feature. Which are the voice sounds and voiceless sounds. For example, there are two phonemes of bilabial stop, those are [p] and [b], but it will be differentiate based on voiced. Where [b] is voice while [p] is voiced. The chart below summarizes the consonant sounds of English.

			PLACE OF ARTICULATION							
ARTICLULATION		Bilabia	Labio Dental	Dental	Alveola	Palatal	Palato Alveola r	Velar	Glottal	Labio Velar
CLUI	Stop/ Plosive	р b			t d			k g

**Table 2.1.** Place and Manner of Articulation

Voiceless phonemes are bold. Voiced phonemes are normal.

(Adapted from Kaharuddin and Djuwairiah, 2018:52)

In charting consonant sounds, there are three categories commonly used in linguists, i.e. distinctive feature, place and manner of articulation. For example: the sound [p] is voiceless bilabial nasal which can be expounded as; Distinctive feature : Voiceless Place of articulation : Bilabial KASSAR

Manner of articulation: Nasal

b. Vowels

As stated by Yoshida (2018) vowels are sounds in which the air stream moves up from the lungs and through the vocal tract very smoothly; there's nothing blocking or constricting it. There are fifteen vowels in American English, i.e. [i:], [1], [u:], [u], [\$\vec{a}\$] [\$\vec{v}\$], [\$\vec{a}\$], [\$\vec{a} [e1]. The production of vowels is classified five categories, i.e.

1) Openness of the mouth

As believed by Williamson, G (2015), the quality of vowel sounds can be different from one another according to the extent to which the jaws are either open and close ('not closed', as a complete closure would prevent the face flow of air out of the mouth). For example the sound [i] as in the word bee. If the symbol is lower on the chart, the tongue is lower, and the vowel sound is referred called an open vowel. For example the sound [a] as in the word palm. The degrees of the openness of the mouth are represented as follows:

8 1	Figure 2.1: Openness and Closeness Of The Mouth						
Closeness of the mouth	Sound examples in wods						
Close Near-close Close-mid	Sound [i] as in the word 'bee' AMNEGERI Sound [1] as in the word 'bit' Sound [e1] as in the word 'bait'						
Mid MAKAS	Sound [ə] as in the word 'sofa'						
Open-mid	Sound [ɛ] as in the word 'red'						
Near-open	Sound [æ] as in the word 'bat'						
Open	Sound [a] as in the word 'palm'						
Openness of the mouth							
(	From Kahamuddin and Divuvairiah: 2						

<sup>(</sup>Adopted from Kaharuddin and Djuwairiah: 2018)

2) Tongue elevation

Kaharuddin and Djuwairiah (2018:84) states that the tongue also plays a decisive role in influencing the quality of vowel sounds by altering its position in the mouth When discussing elevation of the tongue, it will describe the position of the tongue on the vertical position i.e. high, mid, and low, i.e.

- a) The sounds of **high** are [i:], [I], [u:],  $[\mathfrak{d}]$  and  $[\upsilon]$
- b) The sound of **mid** are  $[e_1]$ ,  $[e_2]$ ,  $[e_3]$ , [A],  $[o_0]$
- c) The low sounds are [ɔ],[æ], [ɑ:].

The relationship between the use of the tongue elevation and openness of the mouth is in the following figure:

Figure 2.2: Tongue Elevation

(Adopted from Kaharuddin and Djuwairiah: 2018)

3) Position of the tongue elevation

Position of the tongue will refer to where the elevation takes place on the tree horizontal (Kaharuddin and Djuwairiah, 2018:86).

- a) Front vowels: the vowels are produced by positioning the front part of the tongue to the hard palate, i.e. [i:], [I], [εΙ], [ε], [ε]
- b) Back vowels: the vowels are produced by raising the back part of the tongue to the soft palate, i.e. [a], [u:], [v], [ɔ], [a:].
- c) Central vowel: the vowels are produced by raising the central part of the tongue. The central part is between the position of the front and back parts of the tongue,
  - i.e. [3], [ə] [ʌ]
  - 4) Lips shapes

There are two types of lips shape which usually use native English speakers i.e.:

- a) Rounded: the lips of speakers is made opening and circular mouth, i.e.
   [u:],[v],[o].
- b) Unrounded: the lips of speakers is made in the relaxed position, i.e. [i:], [I], [ε], [æ], [3], [β] [Λ].
  - 5) Length of vocalization

Based on the length of vocalization, vowels are classified into two categories (Roach, 1983): Short Vowels and Long vowels. Short and long vowel in linguistics context is referred as tense and lax vowels.

Height	Tenseness			
		Front	Central	Back
High	Tense	[i:]		[u:]
	Lax	[1]		[ʊ]
Mid	Tense		[ə] [3]	
	Lax	[3]	[Λ]	[ɔ]
Low	Tense	Inna		
	Lax			[a] [a:]

 Table 2.2 Height, Frontness, of Tongue Position and Muscle Tenseness

(adapted from Justice, 2004)

Figure 2. 3 Charting Vowel

(Source: https://www.sltinfo.com)

In charting vowel sounds, four are three categories commonly used in linguists i.e. tongue elevation, position of the tongue elevation and lip shape as well as Length of vocalization. For example the sound [i:] is Tense High Front Unrounded which can be expounded as;

Length of vocalization	: Tense
Tongue elevation	: High
Position of the tongue elevation	ion : Front
Lip shape	: Unrounded

Explanation above based on monophthong sounds. Besides, there are also diphthong sounds. According to Hamann (2005: 18) English has 8 diphthongs, which are vowels that change character during their pronunciation, that is begin at one place and move towards another place. Compare for example the monophthong in word "Name" the vowel begins as [e], but then it moves towards [I]. Therefore it is written [eI], as in [neIII], with two symbols, one for how it starts and one for how it ends. The classification of diphthongs are :

- [e1] : diphthong moving from mid front unrounded to high front unrounded
- [a1] : diphthong low central unrounded to high front unrounded
- [51] : diphthong low back rounded to high front unrounded
- $[\mathfrak{z}\upsilon]$  : diphthong mid central unrounded to high back rounded
- $[a\upsilon]$ : diphthong low central unrounded to high back rounded
- [17]: diphthong high front unrounded to mid central unrounded
- [59] : diphthong mid front unrounded to mid central unrounded

Here are five simple and helpful decoding strategies to know how we

know if vowel in English is long or short:

a) If there is one consonant after the vowel. It will be short, e.g.

	Cut	[kʌt]
	It	[it]
b)	If two consonants after t	the vowel, it will be short, e.g.
	Seat	[si:t]
	Food	[fu:d]
c)	If the vowel stand alone	. It will be long, e.g.
	Go	[gəʊ]
	So	[səʊ]
d)	If the 'e' is at the end o	f the word and it is preceded by another vowel. The 'e' is
	silent and the vowel wil	l be long, e.g.
	Name UN	ILINEIMEITAS ISLAM NEGERI
	Home	[hoʊm]
e)	If there is two vowels s	tood close together. The second vowel will be silent and
	the first vowel will be lo	ong, e.g.
	Main	[m <b>e</b> ın]
	Lied	[laɪd]

## 4. Causal factor of the student's production

According to Nsakla (1995) cause of error may be distinguished as error performance and error competence. In this section, we do not study about error but unnatural. Unnatural is different from error. According to Meriam-Webster Unnatural is not being in accordance with nature or consistent with a normal course of events. Thus, If the learner is inclined and able to correct a fault in his or her output, it is assumed that the form he or she selected was not the one intended, and we shall say that the fault is unnatural. If, on the other hand, the learner is unable or in any way disinclined to make the correction, we assume that the form the learner used was the one intended, and that is an error.

Therefore, this section adapts the causal factor of the student's production by the theory of Nsakla i.e.

a. Unnatural Performance is unsystematic and not very serious, because the students themselves can correct them when their attention is drawn to them. These unnatural are attributed to carelessness, lapse of memory, illhealth, emotional health, etc., and they should not be worried. On the other hand, It is often closely related to lack of motivation. Many teachers will admit that it is not always the student's fault if he loses interest, perhaps the materials and or style of presentation do not suit him.

Performance is the real world linguistic output it may accurately reflect competence but it also may include unnatural speech. Performance may be flawed because of memory limitations, distractions, shifts of attention and interest and unnatural (random or characteristic) or other psychological factors. The performance of a speaker may not be fault free, even though his competence is perfect.

b. Unnatural Competence is persistent and systematic and in consequenceserious, and their treatment calls for careful analysis to discover their cause. These unnatural represent the learners' traditional competence and *First language*. Norrish states that learning a language (a mothertongue or a foreign language) is a matter of habit formation. When someone tries to learn new habits the old ones will interfere the new ones. This cause of error is called first language interference".

Competence is a person's underlying (subconscious) linguistic ability to create and understand sentence, including sentences that they have never heard before. Linguistic competence includes components such as phonetics, phonology, semantics, syntax and morphology. Competence enables native speaker to recognize ambuous senteces or accept even apparently meaningless sentences as syntactically correct (and even making some sense).

#### C. Conceptual Framework

The conceptual framework in this research is given in the following diagram:

Figure 2.4: Conceptual Framework Design

The researcher exposed a comprehensive theoretical framework of research. It aimed at giving direction to what extended the research was conducted. English Segmental sounds were fundamental to be used to answer the problem. Ladefoged (1982) states that vowel and consonants can be thought of as the segment of which speech is composed. The first problem can be answered by using theory phonetic of American English sounds. According to Yoshida (2018) Consonants are sounds in which the air stream meets some obstacles in the mouth on its way up from the lungs and Vowels are sounds in which the air stream moves up from the lungs and through the vocal tract very smoothly; there's nothing blocking or constricting it. Before analyzed, the researcher transcribed the student's speaking into International Phonetic Alphabet from http://lingardo.com.ipa/. Next, the student's production was analyzed bu using notion of four categories of analysis by Kaharuddin and Ismail (2107) i.e. collecting, identifying, classifying and explaining. The purpose of this analysis was and to identify particular patterns of incorrect speech, Next, the researcher classified the incorrect sounds per category using theory Classification of Kaharuddin and Djuwairiah (2018) i.e. in the manner and the place of articulation for English consonant sounds and openness of the mouth, tongue elevation, position of tongue elevation, lips' shapes, as well as length of vocalization for English vowel sounds. Then, the researcher calculated the incorrect sound frequency. The last was explanation. In this part, the researcher drew conclusion. The conclusion was made from the data that get in data

collection. The researcher knew which incorrect sounds were frequently produced. The second problem can be answered gave questionnaire for the students. It was to find out the causal factors in producing English segmental sounds quality in terms of Unnatural Performance and Unnatural Competence (adapted from Nsakla:1995).

.

## **CHAPTER III**

#### **RESEARCH METHOD**

This chapter describes the procedure of the research in order to find answer of problems previously stated in chapter one and explain briefly kind of the research, population and sample, time and place of the research, research instrument, procedure of collecting data and technique of Data Analysis

#### A. Research Method

In this research, the researcher used descriptive method. Arikunto (2013: 234) defines descriptive research as research which intends to collect information about anything that happens in that place according to the naturalistic occasion. As stated by Bogdan and Biklen (1982:145) qualitative analysis as working with data, organizing it, breaking it into manageable units, synthesizing it, searching for patterns, discovering what important and what is to be learned and deciding what you will tell others

The qualitative research was the method used by researcher to analyze segmental sounds produced by the students of English Education Department intake 2015 (PBI 1.2) at UIN Alauddin Makassar.

## **B.** Population and Sample

#### 1. Population

Arikunto (2013: 173) defines population is all of the subjects who are connected to the research. The population of the research was the students of English Education Department 1&2 intake 2015 which consisted of 38 students at UIN Alauddin Makassar

## 2. Sample

Sample is the most of representative of who are researched (Arikunto, 2013:174). The process of gaining the sample of study, the researcher used purposive sampling to find sample. Purposive sampling is one of form in nonprobability sampling which is also referred to judgment sampling, it means that sample elements judged to be typical, or representative for the research, the sample was chosen from the population. The samples were selected according to their English proficiency levels. The identification of English proficiency levels students is based on their TOEFL PBT (Paper Base Test) scores.

In general, we recognize three levels of mastery of foreign languages, namely Basic Level (Elementary), Intermediate Level (Intermediate) and Advanced (Advanced). TOEFL score, experts typically classify the language of this score into the following four levels:

- a. Elementary Level (Elementary): 310 sd 420
- b. Lower Secondary Level (Low Intermediate): 420 sd 480

- c. Secondary Level (High Intermediate): 480 sd 520
- d. Advanced (Advanced): 525 sd 677 (Carson, et al., 1990).

The score 310 to 420 indicates that the students' English skill is still standard (or even low). While, the value 450 to 499 indicates the ability of English is above average, but there is some things need to be reviewed, it could be listening, structure, or reading aspect, based on the lowest aspect.

Based on explanation above, the researcher chose the high intermediate because the ability of the students was good enough. The students who got the high intermediate score must have good ability in English. For instance, in listening section of TOEFL, they must not answer the question well if they did not understand what the speaker said. The students could understand because they knew the elements of sounds that produced by the speaker. Those who already achieve high intermediate levels were included in this research.

# C. Research Setting UNIVERSITAS ISLAM NEGERI

This research was conducted in UIN Alauddin Makassar which was located in Jl. HM. Yssin Limpo No 36 Romang Polong. This research conducted on 31<sup>st</sup> May 2017- 27<sup>th</sup> August 2018.

# D. Research Instrument

Arikunto (2013:160) states that instrument is tools or facilities used by the writer in collecting the data in order to make his or her work easier and the result is better. Therefore, the researcher concluded that instrument took an important role in the research. 1. Picture Description Tasks

Picture Description Tasks were designed to collect data. Picture Description Tasks provided to ask the student describing the four series pictures for at least 5 minutes (*see appendix 1*). The students had got to speak about the pictures. Picture Description Tasks were conducted to know the specific sounds that were commonly correct and incorrect.

2. Questionnaire

Sugiyono (2016:199) defines questionnaire is a written instrument consisting of questions to be answered or statements to be responded by respondents. A questionnaire may take closed form or an open form. Closed form questionnaire asked the respondents to choose their answers or opinions. This questionnare used in this research was Open and Close. The close parts answer the questions about Yes/No question while the Open parts answer the questions that include with reasons. In Open ended question, the response alternatives are not limited by the examiner or test item. In other hand, closed ended question include a prompt, stem, or elicitation followed by alternative response or answers.

In agreement with Kaharuddin and Burhanuddin A. (2017) the questionnaires contained questions divided into five main sections i.e. Background Information, Abilities, Problems, Priorities, and Attitudes. Semistructured interviews were used for cross checking the data derived from the questionnaires about the students' language skills, topics, and language functions. This instrument was used to get more specific information to answer the research question, to know what the factors that made the students produced unnatural English segmental sounds. This case adapted theory from Nsakla (1995) and distinguished as unnatural performane and unntural competence.

 Table 3.1. Specification of Instrument of Causal Factors of Unnatural Segmental

 sound produed by the students

The Causal Factors	Indicator
Unnatural Performance	Lack of motivation to learn phonetic Lack of memory Mother tongue interference Sleep of the tongue Less practice
Unnatural Competence	Unfamiliar with the sound Unknown how to pronounce Lack of knowledge

Table above showed the specification of theory about the causal factors of unnatural English segmental sound production. There are some indicators why the students produce the sounds unnatural. These indicators adjusted to the students answer in questionnaires. **A KASSAR** 

#### E. Data Resources

The primary data processing that resources were taken from the students of English Education Department 1&2, it was about 10 people. The researcher decided to take these students who got High intermediate of TOEFL because the researcher thought that the students had enough abilities and knowledge in English.

The mainly qualitative data of this research was taken from student descriptions and questionnaire outcomes. The student description was given to the students were aimed to analyze how the students produce English segmental sounds. The students' questionnaires were also used to find out the factors involving in the students' segmental sounds production.

## F. Procedure of Collecting Data

The steps in collecting the data were as follows:

1. Pre- recording directions

At the beginning of data collection, the researcher used the following prerecording directions to generate speeches and utteranced of the respondence of this study. These directions were provided in the data collection instruments along with the series pictures. The pre-recording directions could be shown as follows:

- a. Please look at the 4 pictures below
- b. I'd like you to tell me the story that the pictures show
- c. Starting with picture number 1 and going through picture number 4
- d. Please take 1 minute to look at the pictures and think about the story
- e. Do not begin the story until you are ready to do because you are going to be recorded.

(Adapted from Kaharuddin, 2010:17)

#### 2. Picture Description Task

After reading all the pre recording directions, the students were allowed to look at the pictures shown on the data instrument for at least 60 seconds. The rearcher gave some pictures, and the researcher asked the student individualy to explain the pictures for at least 3 minutes. Next, the student had got to start speaking about the pictures.

3. Recording

While the student described the picture, the researcher recorded using recorder like handphone to analyze the data. Recorder meant an instrument for recording sounds, picture or both. The output of the recording file for each student was saved in the form of digital files.

# 4. Transcribing UNIVERSITAS ISLAM NEGERI

After the recording was completed, we listened carefully to speech sounds and transcribed the students'speaking. In this case, the reasearcher kept a permanent account of the student voices in producing English by writing them down and making correct or incorrect in every English sound. The symbol was used in the process of the transcribing is based on IPA or the International Phonetic Alphabet from http://lingardo.com.ipa/.

#### 3. Questionnaire

After the data had been transcribed, the specific sounds that were commonly correct and incorrect sounds were identified from the utterances provided by the students. Next, they were given questionnaire individually. Questionnaire was conducted to find out the students' factors producing correct and incorrect sounds.

## G. Technique of Data Analysis

This technique provided information such as how often (frequencies) a certain incorrect sounds occur in English produced by the students, how often (frequencies) a certain possible factors of the correct and incorrect in English segmental sound productions produced by the students.

Based on the research, the researcher, in analyzing the data used the following procedure according to Kaharuddin, and Ismail (2017), analysis refers to four systematic steps:

1. Collection

In this first step, the researcher collected the data by recording the students' speaking and transcribed into International Phonetic Alphabet.

2. Identification

After the students' speaking had been collected, the researcher identified the data whether natural or unnatural sounds by the students based on IPA (International Phonetic Alphabet).

# 3. Classification

The researcher classified the incorrect items per category, *and then* the researcher calculated the incorrect sound frequency, according to Anas Sudjiono (2015) it is called relative frequency distribution whose formula as follows:

$$\mathbf{P} = \frac{f}{N} \mathbf{x} \ \mathbf{100\%}$$

Note:

P: Symbol of percentage

F: The number of incorrect type

N: The total number of incorrect type.

(Anas Sudijo, 2015:43)

4. Explanation

## **UNIVERSITAS ISLAM NEGERI**

The last was explanation. The last step, the researcher explained and discussed the causal factor of unnatural sounds produced by the students

#### **CHAPTER IV**

### FINDINGS AND DISCUSSIONS

This chapter consists of two sections. The first section deals with the findings show the result of the research that related to the study of unnatural sounds produced by the students of English Education Department intake 2015 and the second one is discussions that shows the interpretation of the findings.

#### A. Findings

The findings of this research showed two things i.e. *The first;* a phonetic analysis of the students' sounds production in terms of place of articulation, manner of articulation as well as distinctive features for American English (AE) production of consonant sounds, and openness of the mouth, tongue elevation, position of tongue elevation, lips' shapes, as well as length of vocalization for the production of English vowel sounds. *The second;* detailed explanation about contributory factors to the production of segmental sounds quality in terms of unnatural competence and unnatural performance factors

This research addressed the issue of American English (AE) sound production with special attention to segmental sounds produced by students of English Education Department at UIN Alauddin Makassar. Descriptive method was used to carry out this study with the support from two data collection instruments i.e. picture description task and questioner. Picture description task was conducted on 25 March 2018 in English Education Department 1&2 intake 2015 class at UIN Alauddin Makassar. The total respondents were 10 students. All the respondents were female. This research was analyzed by using notion of four categories of analysis by Kaharuddin and Ismail (2107) i.e. collecting, identifying, classifying and explaining.

*The first step was collection*, the researcher collected the data by recording the students' speaking and transcribed into International Phonetic Alphabet from <u>http://lingardo.com.ipa/</u> (see Appendix II). There were **one thousand and forty four** (1044) words speech produced by ten (10) respondents (see Appendix III for consonant sound and Appendix 6 for vowel sound).

The second step was identification of the students' production, the researcher underlined the specific sounds were commonly unnatural in segmental sounds produced by the students. The unnatural students' production of segmental sounds occurred not only in consonant but also in vowel sounds of American English (AE). The result of identifying the students' production in consonant sounds of AE was found **443 unnatural consonant sounds** and **351 unnatural vowel sounds** out of 1044 words produced by the students.

*The third step was classification.* The researcher classified the incorrect sounds per category in terms of place of articulation, manner of articulation as well as distinctive features for the production of English consonant sounds, and openness of the mouth, tongue elevation, position of tongue elevation, lips' shapes, as well as length of vocalization for the production of English vowel sounds (see Appendix IV).Then, the researcher calculated the incorrect sound frequency by percentages and put it into the table as shown in the following table.

No.	Sound Category	Total Unnatural sounds	Percentages
1.	[p] voiceless bilabial stop	-	-
2.	[b] voiced bilabial stop	-	-
3.	[m] voiceless bilabial nasal	-	-
4.	[f] voiceless labiodentals fricative	-	-
5.	[v] voiced labiodentals fricative	60	13.54 %
6.	[θ] voiceless dental fricative	10	2.26%
7.	[ð] voiced dental fricative	169	38.15 %
8.	[t] voiceless alveolar stop	25	5,64%
9.	[d] voiced alveolar stop	-	-
10.	[n] voiced alveolar nasal	-	-
11.	[l] voiced alveolar lateral	1	0.23 %
12.	[s] voiceless alveolar fricative	-	-
13.	[z] voiced alveolar fricative	91	20.54 %
14.	[dʒ] voiced palatal affricative	3	0.68%
15.	[f] voiceless palatal affricative	64	14.44 %
16.	[j] voiceless palatal glide	-	-
17.	[ʃ] voiceless palate-alveolar fricative	18	4.06 %
18.	[3] voiced palate-alveolar fricative	-1	0.23 %
19.	[r] voiced palate-alveolar glide	-	-
20.	[k] voiceless velar stop	-	-
21.	[g] voiceless velar stop	-	-
22.	[n] voiced velar nasal	MNEGERI	-
23.	[h] voiceless glottal fricative	_	-
24.	[w] voiced labiovelar glide		0.23 %
TOTA	L ALAUL	430	100
MAKAS Source: Primary Data Processing			

 Table 4.1 Percentages of the Students' Production of Consonant Sounds

The table above indicated that the highest unnatural sound of AE consonant sounds made by the students was the sound [ð] about 38.15%. There were 169 unnatural sounds of sound [ð]. Basically, the sound [ð] can be described through three categories, i.e. distinctive features or the activity of vocal cord, the place of articulation and the manner of articulation. In this case, sound [ð] was voiced dental fricative. In producing this sound, the students frequently uttered the sound into [d] in the initial position and [t] in the final position. In the word 'the' the student mostly pronounced it as [de] whereas the correct was [ðə]. in the word 'with' should be pronounced as [wið] but the students pronounced it as [wit]. In the sound [d], the students changed the manner and place of articulation of the sound from dental and fricative to alveolar and stop. In the sound [t], the students also changed the distinctive feature, the manner and place of articulation of the sound from voiced dental fricative to voiceless alveolar stop.

The second highest unnatural American English (AE) sound made by the students was the sound [z] about 91 incorrect sounds (20.54%). To make this particular sound appropriate, we needed to pay attention to specific sound production. Based on the activity of vocal cord or distinctive Features, it was a voiced sound, it was alveolar based on the place of articulation and it was fricative based on the manner of articulation. This sound was found in Indonesian sounds but it was rarely used and mostly found in initial sound, therefore the students got difficulties when uttering the sound in final position of words. Moreover, sound [z] commonly produced as [s]. The position that the students substituted the sound [z] with [s] occurred in two position; medial and final. The substitution in medial position occurred in the words 'enthusiasm' [In'uzi, azəm] and it was pronounced as [an'tusi asom]. In the final position happened in the words 'raise' [reiz], applause [ə ploz], because [bi kəz] and memorize [mɛmə raiz]. They were pronounced as [rais], [ə'plaus], [bi'kaus], and ['memo\_rais]. This was because the sound [z] and [s] had similarity between manner and place of articulation, but the distinction only on the state of vocal cord; the sound [z] is voiced and the sound [s] was voiceless. This was also because the Indonesian students were used to pronouncing the word the same as the written of it. As we know that English Language had the distinction between the written of the word and how to pronounce it.

The third highest unnatural American English (AE) sound was found 64 incorrect sounds [f] (14.44%) made by the students. This sound could be described into three classifications i.e. it was voiceless based on the activity of vocal cord, it was palatal based on the place of articulation and it was affricative based the manner of articulation. Producing sound [t] was problem that students faced in producing sounds. In simplicity, the substitutions of the sound [t] are sound [c] and sound [s]. The substitution of the sound [tf] occurred in three positions; initial, medial and final. The initial position could be seen from the word 'choose' [tfuz]. It was produced as [cuz]. The replacement of the medial position of the sound [t] occurred in the words 'picture' ['piktfər] and 'question' ['kwɛstfən]. The word 'picture' was pronounced as ['pikcər] by the students. It was substituted from sound [t] to sound [c]. Actually, the sound [t] and [c] has similarity in the place of articulation. The students only changed the manner of articulation of the sound  $[\theta]$  from affricative to stop or plosive. On the other hand, the sound [t] is substituted with sound [c]. While the word 'question' was pronounced ['kwessen] and it was substituted from sound [t] with sound [s]. In the change of the [t] I with sound [s], the students changed the manner and place of articulation of the sound [tf] from palatal and affricative to alveolar and fricative. The word 'such'  $[s_{\Lambda}t]$ , the students pronounced [suc]([t]] in the final position).

The fourth highest unnatural sound was the sound [v] about 60 unnatural sounds (13.54%) detected out of 430 unnatural sounds. The sound [v] described as a voiced labiodentals fricative, which meant that the speaker articulated based on the distinctive features or the activity of vocal cord was voiced, it was labiodentals based on place of articulation and it was fricative based on the manner of articulation. The sound [v] was pronounced like voiceless labiodentals fricative sound [f] by the students. Indonesain and English had this sound, but the students sometimes got difficulties in uttering the sound correctly when they spoke. This was because the sounds [v] and [f] had similarity in the manner and place of articulation, but the distinction only on the state of vocal cord; the sound [v] was voiced and the sound [f] was voiceless. On the other hand, the students substituted the sound [v] with the sound [f]. The position that the students substituted the sound [v] with [f] occurred in three position; initial, medial and final. It could be seen from the pronunciation of word 'voice' [vois] that was pronounced as [fois] by the students (v in the initial position). In the medial position, it could be seen from pronunciation of words 'deliver' [dɪ'lɪvər] and 'seven' ['sɛvən]. The students uttered the word [de'lɪfər] and [sefen]. Finally, the substitution in the final position occurred in the words 'give' [giv], 'move' [muv], 'of'  $[\Lambda v]$  and 'have' [hæv]. The words were produced as [gif],  $[muf], [\Lambda f]$  and [hæf]. In three position of the substitution performed by the students occurred phonological environments. It is preceded or followed by vowel.

The fifth highest unnatural American English (AE) sound was sound [t] about 25 incorrect sounds (5.64%). To produce this sound it needed to pay attention to the activity of vocal cord, place and manner of articulation, it was voiceless alveolar stop Indonesian and English had this sound, but the students sometimes got difficulties in uttering the sound in the middle and final position. Like in the word 'student' which should be pronounced as ['student], but the students pronounced it as ['scuden]. In pronouncing [t] sound most of the students tended to substitute it with [c] and in the final position, it was omitted by the students.

The sixth unnatural AE production made by the students was sound [ʃ] about 18 incorrect sounds (4.06 %). This sound was described into three classifications i.e. it was voiceless based on the activity of vocal cord, it is palate-alveolar based on the place of articulation and it was fricative based the manner of articulation. This sound also did not exist in Indonesian sound. Therefore, the students got some difficulties to produce correctly. This sound also did not exist in Indonesian sound, therefore the students got some difficulties to produce correctly. This was because the sounds [ʃ] and [s] had the distinction on the place; the sound [ʃ] is palate-alveolar and the sound [s] was alveolar but similarity in the manner of articulation. In simplicity, the students substituted the sound [ʃ] with the sound [s]. The substitution of the sound [ʃ] occurred in three positions; initial, medial and final. The initial position could be seen from the word 'she' [ʃi]. It was produced [si] by the students. Next, the change of the medial position of the sound [ʃ] occurred in the words 'section' ['sɛkʃən] and 'appriciate' [ə'priʃi,ett]. The words was pronounced ['sɛksən] and [ə'prisi,ett] by the students. Finally, in final position the word 'English' ['mglıʃ], the students pronounced ['mglɪs].

The seventh unnatural AE production made by the students was sound  $[\theta]$ . The number of unnatural sound that students made in pronouncing sound  $[\theta]$  was about 10 incorrect sounds (2.23%). Voiceless dental fricative meant that the activity of vocal cord should be voiceless, the place of articulation should be dental and the manner of articulation should be fricative. In pronouncing sound  $[\theta]$  most of the students tended to replace it with sound [t]. It might because the absences of this sound from Indonesian phonetic system, so it is quite difficult for them to pronounce this sound. The students changed the manner and place of articulation of the sound  $[\theta]$  from dental and fricative to alveolar and stop or plosive. The position that the students substituted the sound  $[\theta]$  with [t] occurred in three position; initial, medial and final. The Initial position can be seen from the pronunciation of words 'think' [ $\theta$ ink], 'thing' [ $\theta$ in], 'thanks' [ $\theta$ ænks], and 'third' [ $\theta$ srd]. The students pronounced [tɪŋk], [tɪŋ], [tæŋks ], and [tɜrd]. The substitution in medial position occurred in the words 'something' ['sʌmθɪŋ] and 'enthusiasm' [ın'θuzi æzəm]. The students changed them to ['sAmtin] and t [in'tuzi æzəm]. Finally, in the final position happens in the word 'forth' [fɔrθ]. It produced [fɔrt]. In three position of the substitution performed by the students occurred phonological environments. It is preceded or followed by vowel.

The eighth unnatural American English (AE) production made by the students was sound [dʒ]. It is indicated that there are 3 incorrect sounds (0.68%) in uttering this sound. Based on the distinctive feature or the activity of vocal cords, sound [dʒ] was classified as voiced, it was palatal sound based on place of articulation and it was affricative based on manner of articulation. It was substituted with [j]. For example; in the word subject, it should be pronounced [sʌbdʒikt] but the students pronounced as ['sʌbjek]. As matter of fact, the sound [dʒ] and [j] could be considered as the same sounds, especially if the two sounds were observed from the activity of vocal cord and the place of articulation. But those two sounds were different from the manner of articulation. The sound [dʒ] was affricative while the sound [j] was stop.

The ninth unnatural American English (AE) production made by the students was sound [1]. Voiced alveolar nasal meant that the distinctive feature or the activity of vocal cords was classified as voiced, it was alveolar sound based on place of articulation and it was nasal based on manner of articulation. It could be seen from the table [1] voiced alveolar lateral had 1 incorrect sound (0.23%). It occurred in the word 'talk'. This word should be pronounced as [tok]. It should be omitted when it was pronounced but the students articulated [tolk]. The students added the sound [1] because they did know that when it should be omitted.

The next unnatural American English (AE) production made by the students was sound [w]. The sound [w] was produced Voiced labiovelar glide which meant that the distinctive feature or the activity of vocal cords was classified as voiced, it was palatal sound based on place of articulation and it was affricative based on manner of articulation had 1 incorrect sounds (0.23%). It occurred in the word 'answer' ['ænsər]. This word should be articulated as ['ænswər]. It was different from word above. This sound was not omitted but added by the students.

The last unnatural American English (AE) production made by the students was sound [3]. Basically, the sound [3] can be describe through three categories, that is distinctive features or the activity of vocal cord, the place of articulation and the manner of articulation. In this case, sound [3] was voiced palate-alveolar fricative, it could be seen from the table above there were 1 incorrect sound (0.23%). The students replaced it with sound [z]. It can be seen from word 'usual'. It should be articulated ['juʒəwəl] but it was articulated [yuzuwal] by the students.

No	Sound Category	Total Unnatural Sounds	Percentages
1	[i:] Tense High Front Unrounded

Source: Primary Data Processing

Based on the table, the students' production had problems in some specific sounds, especially in American vowel sounds. It is important to clarify the unnatural vowel sounds through the following description from the most frequent to least frequent.

The data analyzed by the researcher indicated that the highest problem in producing AE sound  $[\varpi]$  was about 135 unnatural sounds (38.46%). Producing the sound  $[\varpi]$  can be described as Lax Low Front Unrounded. This meant that the sound  $[\varpi]$  was produced in the front part of the tongue. The position of the tongue was low and the shape of lips is unrounded as well as the terms of this sound was known as lax or short vowel. In this case, the students frequently uttered this sound into [a] and [e]. The substitution of the sound  $[\varpi]$  occurred in two positions. Firstly, the initial position could be seen from the words such as 'activity'  $[\varpi k'trvəti]$ . It was pronounced [ak'trviti] by the students. The word had the sound  $[\varpi]$  in the initial position was changed with sound [a]. In this case, tongue elevation, lips shape and length of vocalization were still the same as uttering the sound  $[\varpi]$  but the fact that producing the sound  $[\varpi]$  should be in the front part of the tongue but the students

produced in central part of the tongue. Secondly, the medial position could be seen from the word 'class'. It should be pronounced [Klæs] but the students pronounced as [klas]. The sound [æ] not only changed with sound [a] but also sound [e] such as in the word 'has'. It should be produced [hæz] but the students pronounced [hes]. The sound [e] did not exist in American sounds, it was only in British Sound and Indonesian Sounds but the sound [e] was similar to the sound [ $\varepsilon$ ] in American Language. The sound [ $\varepsilon$ ] was produced in the front part of the tongue and the position of tongue is mid low.

The second highest unnatural AE of vowel sounds produced the sound [ə] because Indonesian had sound that similar to pronounce [ə]. The students tended to replace the sound [ə] with sounds [o], [u], [a], [e] and [i]. Firstly, the replacement of the sound [ə] with [o] could be seen from the word 'Conclude' [kən'klud]. Most of the students pronounced as [kon'klud]. The differences when the students pronounced this sound were in the position of the tongue and lips shape. In the position of the tongue the students should be in the central position but they pronounced it in the back part of the tongue. The lips shape of the students also should be unrounded but they made it rounded. Secondly, the replacement of the sound [ə] with [u] could be seen from the word 'Illustrate' [Ilə,strent]. It was produced [Ilu,strent] by the students. In this case, the students changed the tongue elevation, the position of the tongue and lips shape of the sound [ə]. They produced it in the high and back part of the tongue and made rounded their lips. Thirdly, the replacement of the sound [ə] with [a] could be seen from the word 'material' [mə'tıriəl] and he students produced [ma'terial]. In

this case, position of the tongue, lips shape and length of vocalsation were still the same as uttering the sound [ə] but the fact that producing the sound [ə] should be in the middle position of the tongue but the students produced in low position of the tongue. Fourthly, the replacement of the sound [ə] with [e] could be seen from the word 'Explanation' [, $\epsilon$ ksplə'neɪʃən]. It was produced [, $\epsilon$ ksple'neɪsən] by the students. The sound [e] did not exist in American sounds, it was only in British Sound and Indonesian Sounds but the sound [e] is similar to the sound [ $\epsilon$ ] in American Language. The sound [ $\epsilon$ ] was produced in the front part of the tongue. Finally, the replacement of the sound [ə] with [i] could be seen from the word 'Activity' [æk'tɪvəti]. Most of the students pronounced as [ak'tɪviti]. The sound [i] was produced in middle front of the tongue. Therefore, the differences occurred in the tongue elevation and position of the tongue.

The third highest unnatural AE of vowel sounds frequently made by the students was sound [1] about 34 incorrect sounds (9.69%) made by the students. The sound [1] changed with sound [e]. The sound [e] was similar to the sound [ $\epsilon$ ] in American Language. Hence, it was produced as lax mid low front unrounded. Therefore, the problem of the students occurred in tongue elevation. The subsitution of the sound [1] occurred in two positions. Firstly, the initial position could be seen from the word 'explain' [1k'splein]. It was pronounced [ek'splein] by the students. Secondly, the medial position could be seen from the word such as pronouncing

'[ma'terial]. It had to be [mə'tıriəl] but the students changed the sound [1] into sound[e].

The forth highest unnatural AE of vowel sound frequently made by the students was [a]. The sound [a] should be produced Lax Low Back Rounded. This meant the sound [a] was produced in the back part of the tongue. The position of the tongue was low and the shape of lips was rounded as well as the terms of this sound was known as lax or short vowel. Seen from the table, there were 23 unnatural sound of sound [a] (6.56%). The problem that the students faced was tended to replace the sound [a] with sounds [o], [a] and [ə]. The replacement occurred in two positions; initial and middle. Firstly, the replacement of the sound [a] with sound [o] performed in the word 'process' ['pro\_ses]. It was pronounced ['pro\_ses.] by the students (middle position). In this case, the difference was only in the tongue elevation. The fact that producing the sound [a] should be in the low position of the tongue but the students produced in middle position of the tongue. Secondly, the replacement of the sound [a] with sound [a] performed in the word 'Smart' [smart] (middle position). It was pronounced [smart] by the students. In this case, the differences occurred in the position of the tongue and in the shape of lips. Producing the sound [a] should be in the back part of the tongue and rounded shape of lips but the students produced it in the central part of the tongue and their lips were unrounded. The last, the replacement of the sound [a] with sound [a] performed in table in the word 'Opportunity' [ appr tunpti]. It was pronounced [ poor tunitily the students (initial position). The fact that the sound [a] should be produced Lax Low Back Rounded. In the students' production, they articulated as Lax Mid Central Unrounded.

The fifth highest AE of vowel sounds produced by the students was  $[\varepsilon]$ . The sound  $[\varepsilon]$  had 23 unnatural sounds (6.56%) Producing the sound  $[\varepsilon]$  was Lax Mid low Front Unrounded. This meant the sound  $[\varepsilon]$  is produced in the front part of the tongue. The position of the tongue was mid low and the shape of lips was unrounded as well as the terms of this sound was known as lax or short vowel. The problem that the students faced when pronouncing the sound  $[\varepsilon]$  was they tended to produced it into sound  $[\varepsilon]$ . They replaced the sound  $[\varepsilon]$  into diphthong. It was because the students followed the written of the word that also contained diphthong.

The sixth highest incorrect sound produced by the students was sound [e1]. The percentage incorrect sound that students made in pronouncing sound [e1] was 6.27% (22 unnatural sounds). In producing this sound, it should be Tense Mid Front Unrounded to High Front Unrounded which meant that it was produced in the front part of the tongue. The position of the tongue was from mid to high and the shape of lips was unrounded as well as the terms of this sound was known as tense. The substitution of the sound [e1] with sound [a1] could be seen from the word 'Say' [se1]. This was pronounced as [sa1] (final position). The substitution of the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the sound [e1] with sound [a1] could be seen from the word 'Say' [se1]. This was pronounced [sa1] (final position). The sound [e1] sould be produced in the front part of the tongue but the students produced it in the central part of the tongue. Besides, the position of the

tongue was from mid to high but they pronounced it from low to high. Secondly, the substitution of the sound [e1] with sound [e] could be seen from the word 'Make' [merk]. It was pronounced [mek] by the students (middle position). In producing the sound, the tongue position of the students was in middle, but it should be in middle to high and the term of the sound should be tense but they made it Lax or short vowel. Thirdly, the substitution of the sound [e1] with sound [i] could be seen from the word 'Great' [grent]. The students pronounced as [grit] (middle position). In this case, the students produced the sound [e1] only in in the high position. The fact that it should be in the middle to high and the term of the sound should be tense but they made it Lax or short vowel.

The seventh highest AE of vowel sounds produced by the students was sound [5]. The sound [5] was described in four features i.e. the position of back part of the tongue was in the middle and the shape of lips was rounded as well as the terms of this sound is known as lax or short vowel. The sound [5] had 14 unnatural sounds (5.13%). The sound [5] was substituted with sound [a] and [au]. The substitution happened in two positions. The first is initial position of the word. The substitution of the sound [5] with sound [a] could be seen from the word 'All' [51], it was pronounced [all]. The sound [5] was described in four features i.e. the position of back part of the tongue was in the middle and the shape of lips is rounded as well as the terms of this sound was known as lax or short vowel. The problem in students' production happened to the the position of the tongue which produced in central part of the tongue and also the tongue elevation which was in the low part of the tongue.

The second was in the middle position. The substitution of the sound [ɔ] with sound [au] could be seen from the word 'Applause' [ə'plɔz] and it was pronounced [ə'plaus]. In this case, the problems occurred in all terms in classification of vowel sound.

The eighth unnatural AE of vowel sounds produced by the students was sound  $[\Lambda]$ . Basically, the sound  $[\Lambda]$  is produced in the central part of the tongue. The position of the tongue is mid low and the shape of lips is unrounded as well as the terms of this sound is known as lax or short vowel. In this case, the sound  $[\Lambda]$  was lax mid low unrounded. Based the table, there were 14 unnatural sounds (3.99%) when producing this sound  $[\Lambda]$ . The sound  $[\Lambda]$  was substituted with sound [a] and [o]. The substitution happened only in medial position. The substitution of the sound  $[\Lambda]$  with sound [a]could be seen from the word 'Some' [sAm] and it was pronounced [sam]. The sound [A] and sound [a] had similarity in the part of tongue that the sound produced, in central part of the togue but the distinction was in the position of the tongue. The sound  $[\Lambda]$  was in mid low position while the sound [a] in low position. While the substitution of the sound  $[\Lambda]$  with sound [0] could be seen from the word 'front' [frAnt] and it was pronounced [front]. In this case, the differences were in position of the tongue and lips shape. The sound [o] produced in back part of the tongue and rounded lips while the sound  $[\Lambda]$  in central part of the tongue and unrounded lips.

The next unnatural AE of vowel sounds produced by the students was [oo] sound. The data analyzed by the researcher indicated that the students had 11 unnatural sounds (3.13%). The sound [oo] was produced in the back part of the

tongue. The position of the tongue from mid to high and the shape of lips was unrounded as well as the terms of this sound was known as tense. The students replaced the sound [oo] with sound [o] and [u]. The replacement occurred in three positions; initial, medial and final. The first is in initial position. The word 'opening' ['oopənıŋ] was produced ['opənıŋ] by the students. This was because the written of the words had pure vowels no diphthong. Therefore, the students were conscious to pronounce it. It also happened to the word 'chose' [''tfouz]. It was pronounced ['tfuz] by the students. In the final position, it could be seen from the word 'also' ['olsou ] that was produced ['olso].

The last was sound [ao]. It had 1 unnatural sound (0.28%) made by the students. In producing the sound [1], it should be from the central to back of the tongue. The position of the tongue was from low to high and the shape of lips is from unrounded to be rounded. The terms of this sound was known as tense. In this case, the sound [ao] changed with sound [oo]. This occurred in medial position. It could be seen from the word 'now' [nao] but the students pronounced [noo].

*The last step of analysis was explanation.* This part presents the result of questionnaire that had been given to the students. The questionnaire was used to find out factors of the unnatural sounds produced by the students of English Education Department at UIN Alauddin Makassar.

To find out factors, students are asked to answer questions according their unnatural sounds for each student. The result shows that the students at least encountered two factors as they pronounced both consonants and vowels i.e. Unnatural Performance and Unnatural Competence. Let us take look at the following table.

The Causal Factors	Problems uttering the specific sound	Total Occurances	Percentages
	Lack of motivation	7	5.07 %
	Lack of memory	4	2.90 %
Unnatural Performance	Mother tongue interference	22	15.94 %
	Sleep of the tongue	11	7.97 %
	Less practice	22	15.94 %
	Unfamiliar with the sound	20	14.49 %
Unnatural Competence	Unknown how to pronounce	21	15.22 %
	Lack of knowledge	19	13.77 %
Other possible	Cannot differentiate two sounds	12	8.70 %
TOTAL		138	100 %

**Table 4.3.** The questioner results of causal factor produced by the respondents

Source: Primary Data Processing

The table above shows that the unnatural sound occurred potentially because of mother tongue interference about 15.94%. The unnatural sound production occurred when some American English consonants were absent in Indonesian sounds. Therefore, almost all of them changed American English sound into Indonesian Sounds which have close inventories with English sounds.

The students did not have good ability in producing English sounds because they did not practice more or only used English at their college. It was also the most problem that produced unnatural sound by the students. There was not partner that they want to practice to speak. Although there was partner, they could not be correct each other. It was because their partner was not native speaker.

They never practice and learn English especially from the way the native speaker pronounces the sound. As the result, we can say that the students did not have good ability in producing English sounds because they did not practice more or only used English at their college. Therefore, based on the table there are 14.49% stated that they were unfamiliar with the sound. They could pronounce correctly if the word familiar with them.

Next, there were 13,77% of the students stated unnatural sounds production was caused due to lack knowledge. Although the students had learnt phonetic in the college but they still made unnatural sounds. It was because they limited knowledge of the phonetics. It was because their teacher did not teach effectively in their class. Limited time in learning phonetic in the class made the students could not propose some questions for the lecturer. Thus, the students did not understand. Therefore, they feel not interesting to learn it. The problem was lack of motivation about 5,07%. The student did not have high motivation because they did not interest in learning phonetic. As the result, they did not produce English sound well and sometimes they forgot.

The last, there were 2.90% states that they faced problem due to lack of memory. The students had known how to pronounce the specific sounds but they sometimes forgot when they used in speaking. Sometimes they did not focus

when they were speaking. Conclusively, the most problem of unnatural sounds produced by the students was mostly caused by unnatural performance.

## **B.** Discussions

The discussions show the interpretation of the findings about the unnatural students' production of consonant and vowel sound and the factor of the unnatural students' production which performed by the students are described below;

*The first;* a phonetic analysis of the students' sounds production in terms of place of articulation, manner of articulation as well as distinctive features for production of consonant sounds and openness of the mouth, tongue elevation, position of tongue elevation, lips' shapes, as well as length of vocalization for vowel sounds. Based on the findings, the researcher found the students of English Education Department intake 2015 (PBI 1&2) at UIN Alauddin Makassar produced some unnatural consonant sounds are [v],  $[\theta]$ ,  $[\delta]$ , [z],  $[\sharp]$ , [f], [t],  $[d_3]$ , [3], [1] and [w]. Beside consonants, the production of unnatural vowel sounds are [æ], [oo], [a],  $[e_1]$ , [ə], [a], [a].

The finding is similar to Nilawati (2008) research conducted *The Fossilized Phonetic Errors of the English Department Students of Andalas University*. Based on the research, she conclude that the error consonant omission are [t], [d], and [k], the error consonant selection were [v],  $[\theta]$ ,  $[\delta]$ , [z], and [3]. The errors vowel selection are [o], [æ], [ɛ], [ɑ],[□] and [ə], and the errors of diphthong selection are [ou], eə], [əu] and [eɪ]. The difference Nilawatis' finding of this research are in unnatural sounds were [1], [w], [f], [f] for consonants and [A] for vowels.

Dwi Ardeni Amalia (2010) also commented in in her research 'the students' errors analysis in pronouncing English sound'. Her research indicated that the students still made some errors in pronouncing English sounds which were still mispronounced by the 7 students were in nasals /ŋ/, fricative /ʒ/, /ð/, /θ/, and /ʃ/, affricative /ʧ/ and /dʒ/ long vowels /i:/, /3:/, /u:/, /ɔ:/and /a:/, and also short vowels /i/, /ei/, /æ /, /ə/, / $\alpha$ /, / $\nu$  /, and // $\Box$ /. The result of the research indicated the student had difficult in pronouncing some English consonantal sounds that do not exist in Indonesian sounds, even those consonantal sounds which seem similar to some Indonesian sounds. They have differences in distinctive features, manner and place of articulation.

*The second;* The explanation about causal factors to the production of segmental sounds, the finding shows the unnatural sound production occurred potentially because of mother tongue interference and less practice.

The finding is reinforced by the result of research conducted by Nur Phadilah (2018) who conducted research untitled *The causal factors of Bugis-Bone Accent Interfence on the pronunciation in English Conversation.* She has found that the causal factors of Bugis- Bone Accent interference on the pronunciation in English conversation because the difference phoneme produced by Bugis native speakers and English native speaker in some areas of phoneme.

The finding is similar to Faishol Hadi (2015) research conducted *An Analysis of ESL Students' Segmental Phonemes in Pronunciation Class*. According to the data analysis, the differences segmental phonemes between English and Bahasa Indonesia cause students' difficulty in pronouncing several English segmental phonemes. His finding indicated that the students' mother tongue influences the unnatural sound production.

As the respondents stated that;

*"It is sometimes influenced by my habit in recognizing and pronouncing Indonesian alphabet".* (The statement of respondent 2 was taken from the questionnaire on 14 September 2018)

Maybe because of my first language so I got difficult to produce it". (The statement of respondent 5 was taken from the questionnaire on 13 September 2018).

*"Because it is not my first language and rarely used it in my communication".* (The statement of respondent 8 was taken from the questionnaire on 11 September 2018).

The statement above shows that the unnatural sound production occurred

when some English consonants were absent in Indonesian sounds. Therefore, almost

all of them changed the English sound into Indonesian Sounds which have close

inventories with English sounds.

UNIVERSITAS ISLAM NEGERI

The respondent also stated that;

*"The factor is less practice in producing those vowels in speaking English".* (The statement of respondent 2 was taken from the questionnaire on 13 September 2018)*"* 

*"I rarely practice of speaking and I don't really know about diphthong sound".*(The statement of respondent 9 was taken from the questionnaire on 10 September 2018)

The students did not have good ability in producing English sounds because

they did not practice more or only used English at their college. There was not partner

that they want to practice to speak. They never practice and learn English especially from the way the native speaker pronounces the sound.

Nilawati (2008) also claimed that the causes of the fossilized phonetic errors include three factors. Firstly, the students apply the phonological rules of their mother tongue to those of the target language. Secondly, the students are insufficiency in English mastering, visible low proficiency, lack acculturation, transfer, input, or corrective feedback. Thirdly, the complexity of the English itself often causes the students to get confused.

As the respondents stated that;

"Sometimes I cannot distinguish the  $[\theta]$  and  $[\delta]$  sounds in some words". (The statement of respondent 2 was taken from the questionnaire on 13 September 2018).

*"Too much vowels sounds to distinguish and it is very confusing".*(The statement of respondent 2 was taken from the questionnaire on 13 September 2018)

"Sometimes I confused about these two sounds due to my lack of exercise. (The statement of respondent 10 was taken from the questionnaire on 13 September 2018).

What Nilawati and respondents stated is relevant to Syafei (1988) explains th

reasons why English is difficult for Indonesian leaners as follows:

"English is quite difficult for Indonesian learners because of two cases. First, the difficulties are because of irregular spelling of English. it offers poor guidance to its pronunciation. Second, the difficulties are due to inference (negative transfer from Indonesian to target language (English)".

With respect to the above Siti Nadziroh (2015) also comments that source of

errors happen because of most of students just memorizing how to pronounce,

avoidance the difficult phonemes as the result of the lack knowledge of correct

pronunciation and the meaning of English word, the students' inability to recognize the words, the students' difficulty to pronounce those new sounds as they are not trained to pronounce such sounds since they were children.

*"Because I am not familiar with sound".*(The statement of respondent 1 was taken from the questionnaire on 12 September 2018)

*"Because I never learn how to pronounce correctly"* (The statement of respondent 6 was taken from the questionnaire on 11 September 2018)

*"It was naturally because I have no knowledge of it".* (The statement of respondent 7 was taken from the questionnaire on 11 September 2018)

*"I did not know the difference of the sound"* (The statement of respondent 4 was taken from the questionnaire on 13 September 2018).

The statement above is also relevant to Ghulamullahand and Dr. Mohd Hilmi Bin Hamzah (2017) research conducted *English Language Segmental Awareness of Pakistani Elementary English Teachers*. Their research was distributed to explore the teachers' academic and professional education and to find out their opinions about the usefulness of these segments. Although most of teachers were interested in studying the segments, they never studied them properly and they were unable to recognize the symbols.

The results of the researches indicate that the English students are rally facing serious problem regarding consonants and vowel productions. In this case there were some problems out of the causal factors. As the researcher explained at the previous chapter, this case adapted theory from Nsakla (1995) about the causal factors of unnatural AE segmental sound production. This theory distinguished as unnatural performane and unntural competence. Each of the causal factors type had indicators.

The indicators of unnatural performance in this research included; lack of motivation, lack of memory, mother tongue interference, sleep of the tongue and less practice. The indicators of unnatural competence in this research included; unfamiliar with the sound, unknown how to pronounce the sound and lack of knowledge. In this research, the unnatural sound occurred potentially because of unnatural performance.

#### **CHAPTER V**

## **CONCLUSION AND SUGGESTION**

This chapter consists of two sections. The first section deals with the conclusion that related to the unnatural sounds produced by the students of English Education Department 1&2 intake 2015 and the second one is devoted to the suggestion related to this research.

#### A. Conclusion

The conclusion stated based on the analysis of phonetic in terms the segmental sounds. The first problem can be answered by the result of Picture Description Task. This was used to find out the sounds was incorrect to be pronounced. Based on the findings of the research and discussion, the researcher concluded that the students of English Education Department intake 1&2 intake 2015 at UIN Alauddin Makassar produced some unnatural sounds such as [ð], [z], [tʃ], [v], [t], [f], [θ], [dʒ], [1], [ʒ], [w]. Besides consonants, vowels were produced unnaturally by the students. Those are [æ], [ə], [ɪ], [ɑ], [ɛ], [eɪ], [ə], [ʌ], [ou], [au].

The second problem can be answered by the result of questionnaire given to the students. This was used to find out factors of unnatural sounds produced by the students. The finding of causal factors was found in this research were the unnatural sound occurred potentially because of mother tongue interference and less practice.

## **B.** Suggestion

Based on the conclusion above, there are some important things that can be suggested in this research and hopefully can be useful for the reader:

- 1. For students, they have to be getting the awareness about the important of having a good pronunciation and how to spell the word correctly to get understandable in speaking. and hopefully this research can help to know about it.
- 2. For English lecturers, they can then give treatment to the students towards their unnatural sounds. The treatment can be made as a focus of developing students' pronunciation proficiency weakness which can be seen by reviewing the tabulation of the pronunciation errors. The weakest features of their pronouncing proficiency can be indicated by the features of pronouncing error which occur the most.
- 3. For the next research, the researcher hopes that they can learn more and prepare everything to make a good research and can follow up this research.

# **APPENDIX I**

# **Picture Description Task**

# **Personal Information :**

Introduction	:	
No. HP	:	
Department	:	
Gender	:	
Age	:	
Reg. Number	:	

The aims of this Picture Description Task is to describe how the students of English Education Department utter English segmental sounds. In this case, the researcher will assess the students' ability in uttering English segmental sounds. English segmental sound consists of consonants and vowels.

# Direction

1. Look at the picture carefully !

:

- 2. Please describe the picture about 3 minutes. Raise your voice and produce the sounds clearly.
- 3. Starting with the picture number 1 till number 4
- 4. Before describing the picture, take 1 minute to pay attention and think about the picture.
- 5. To get the accurate data, the researcher will record the sounds. Do not begin the story without instruction from the researcher.

The series pictures are presented as follows :

## **APPENDIX II**

## THE STUDENTS PRODUCTION OF DESCRIPTION TASK

#### **RESPONDEN 1**

There is a teacher who conducted English learning in the class with some students. In The First section, the teacher do opening by saying greeting such as good morning and how are you to the students. After that, the teacher explain about the subject or the material that has explained last week. Asking the students question and asking the students to raise their hand who knows the answer of the question from the teacher. Some students raise their hand and the next teacher chose one of them. The students who raise his hand answer the question correctly. Everybody or every student gives applause to the students who answer question correctly.

#### **RESPONDEN 2**

As we now that, They are doing teaching and learning process. The first picture explain that the teacher want to explain something and ask questions to the students. The second picture says that there are some students who raise their hand. It means they want to answer question from the teacher. The third picture, one of them who raise their hand is point out by the teacher. The students answer the question. May the answer is correct or something make teacher appreciate the student answer. It is explained in the forth picture. So, the teacher claps her hand with other students. It seems like she are giving positive reinforcement to the student who answer the question.

## **UNIVERSITAS ISLAM NEGERI**

#### **RESPONDEN 3**

The first table is like a teacher who teaches her students. She explain some material. It' like Teacher maybe asks some questions section that related to what has talked before. There are some students raise their hand. The third Finally there is one student that who picked by teacher and explain the question have given before. The last picture, after the students explain the answer for the teacher question before. Maybe the students answer the question correctly. The teacher clap her hand and all the student clap their hand because already answer the questions.

# **RESPONDEN 4**

In the first picture, there is a teacher and there are several students. As usual teacher will explain the material to the students. Next picture, the teacher is asking to their student about something that related to the material. There are 4 students who raise their hands in order to answer question that uttered by the teacher. The teacher already choose one student to answer the question. The student who already chosen by the teacher explain the answer. The forth picture, The teacher giving some reward to the students who answer the question by asking their friends to giving applause to the friend who have already answer the question

# **RESPONDEN 5**

The first picture tells us about in the class there is a teacher and some students which they are studying English. A teacher give explanation about English. The teacher check the student attention with some question. Some students enthusiasm raise hand to answer the question. The teacher chose one students to answer the question. The teacher give reinforcement to appreciate the student who have answer the question

## **RESPONDEN 6**

The first picture is about teaching activity in the class. The teacher gives great explanation for the students to know ability of the students or the previous knowledge about the material. The second picture, Teacher gives one question for the student. Four of students try to answer that question. The teacher chose one of them to answer the question. One of the students speaks and explain about his answer. To appreciate braveness and confident for great opinion teacher and all, the students give applause for his effort.

#### **RESPONDEN 7**

The teacher is introducing material to her students. Then, She asks a question. Some students raise their hand to answer the teacher question. The teacher points the students who sit in front of her to answer question. After the student answer the question, the teacher is giving applause to the student SAR

AKAS

## **RESPONDEN 8**

Today is Monday. Ms. Bella comes to the class to seven grade class to teach about English. Firstly, Ms. Bella is doing greeting to the student and asking about their condition. After that, Ms. Bella asked about previous the materials. She asks their student to raise their hand if they want to speak. Some of students raise their hand and Ms Bella points them one by one. After the students explain what they know about the previous material. Ms bella appreciates them by saying greet and thanks and ask all of the students to giving applause.

#### **RESPONDEN 9**

In the first picture, when we see from this picture. This activity seems like there is a teacher stand up in front of the classroom and the teacher explain the material in front of the classroom for the students. It is such us giving warming up or maybe the teacher asking materials or invite student to memorize last material. Or maybe she explain materials today

Move to the next picture, we could see this activity. It is asking section maybe. It seems like Teacher asking material for the students and there are some students raise their hands briefly. And I think they are smart enough because almost all students here raise their answer. It means that they have a good answer.

It seems like answer section, there ii one student here stand up and deliver his opinion and answer the question from the teacher maybe. And I see student speak briefly, confidently to the teacher

After deliver his opinion, I see in this picture. Teacher give reward and all student here giving reward also by giving applause to one student who briefly and confidently deliver his opinion. I thinks that the last section all those activities in the classroom.

#### **RESPONDEN 10**

This is the sequential picture. The first picture illustrate that the dozen is describing something. The students listening carefully with this How to say illustrated from their eyes contacting to their teacher.

In this second picture, I can conclude that this is the hard work of the teacher give the opportunity for the students to give first feedback, asking clarification and giving addition by raising their hand

Moving to the third picture, This is where one of the chosen students' speaking. The teacher has been chosen which one of the students being choose or selected to speak and he stand up to speak. So, this is one voice rule or something done here

Everybody claps their hand. So this is like appreciation, this is the feedback in educational psychology called as reinforcement or giving appreciation to pick up what good thing that he have done

	2		
C.	In unc	nderstanding the causal factors production of American English segmen	tal sounds
		atural, please answer the question below;	
		According to the result of this research, the incorrect consonant sounds that the	ne students
		UNIVERSITAS ISLAM NEGERI produce are [v], [θ], [ð], [z], [ʧ], [dʒ], [ʒ], [ʃ], [t], [w], [l].	
	a.		do vou tend
	u.	to substitute the sound [ð] and what problems did you face when you proc	•
		to substitute the sound [0] and what problems and you face when you proc	
			•••••
	h	b. Based on the finding, you substituted the sound $[\theta]$ with sound $[t]$ . Why	da yay tand
	0.		-
		to substitute the sound $[\theta]$ and what problems did you face when you proc	iucea It?

c. Based on the finding, you substituted the sound [tf] with sound [c]. Why do you tend

to substitute the sound [f] and what problems did you face when you produced it?

.....

- d. Based on the finding, you substituted the sound [ʃ] with sound [s]. Why do you tend to substitute the sound [ʃ] and what problems did you face when you produced it?

.....

e. Based on the finding, you substituted the sound [v] with sound [f]. As we know that the sounds [v] exist in Indonesian Sounds. Why do you tend to substitute the sound [v] and what problems did you face when you produced it?

#### UNIVERSITAS ISLAM NEGERI

f. Based on the finding, you substituted the sound [z] with sound [s]. As we know that the sounds [z] exist in Indonesian Sounds. Why do you tend to substitute the sound [z] and what problems did you face when you produced it?

.....

g. Based on the finding, you substituted the sound [t] with sound [c] like in the word 'student' which should be pronounced as ['student], but you pronounced it as ['scuden]. As we know that the sounds [t] exist in Indonesian Sounds. Why do you tend to substitute the sound [t] and what problems did you face when you produced it?

.....

h. Based on the finding, you added d the sound [1]. It occurred in the word 'talk'. This word must be pronounced [tok] but you uttered as [tolk]. Why do you tend to ommited the sound [1] and what problems did you face when you produced it?

 According to the result of this research, the incorrect vowel sounds that the students produce occurred I monopthong and diphthong.

The incorrect monophtong sounds that the respondents produced were [x], [a], a. Based on the finding, you substituted the sound [æ] with sound [a] and [e]. Why do you tend to substitute the sound [æ] and what problems did you face when you produced it?

b. Based on the finding, you substituted the sound [ə] with sound [o], [u], [a], [e] and [i]. Why do you tend to substitute the sound [ə] and what problems did you face when you produced it?

.....

- .....
- c. Based on the finding, you substituted the sound [a] with sound [o], [a] and [ə]. Why do you tend to substitute the sound [a] and what problems did you face when you produced it?

\_\_\_\_\_

d. Based on the finding, you substituted the sound [1] with sound [e]. Why do you tend to substitute the sound [1] and what problems did you face when you produced it?

#### **UNIVERSITAS ISLAM NEGERI**

e. Based on the finding, you substituted the sound [ε] with diphthong sounds [eɪ]. Why do you tend to substitute the sound [ε] and what problems did you face when you produced it?

.....

f. Based on the finding, you substituted the sound [ɔ] with diphthong sounds [a] and [au]. Like n the word all and because. You pronounced [ all] and [bi'kaus]. They

must be pronounced [51] and [b1'k52]. Why do you tend to substitute the sound [5] and what problems did you face when you produced it?

.....

.....

g. Based on the finding, you substituted the sound [A] with diphthong sounds [a] and [o]. Why do you tend to substitute the sound [A] and what problems did you face when you produced it?

\_\_\_\_\_

The incorrect diphtong sounds that the respondents produced were[ ov], [er].

a. Based on the finding, you substituted the sound [e1] with diphthong sounds [a1] and
[e] and [i]. Why do you tend to substitute the sound [ε] and what problems did you
face when you produced it?

#### UNIVERSITAS ISLAM NEGERI

b. Based on the finding, you substituted the sound [oo] with diphthong sounds [o] and and [u]. Why do you tend to substitute the sound [oo] and what problems did you face when you produced it?

.....

c. Based on the finding, you substituted the sound [ao] with diphthong sounds [oo] and and [u]. Why do you tend to substitute the sound [ao] and what problems did you face when you produced it?

.....

#### **CURRICULUM VITAE**

Hartina was born in Tosora on 17<sup>th</sup> February 1996. She is the second child of his parents, H. Abdu Rahim and Hj. Nurhayati. She has two amusing brothers, Riadi Hamdan and Muh. Agim Nastiar. She started her education from a kinder garden, TK. Idalatikka Tosora, Wajo in 2001. In the next year, she continued her elementary school at MI

As'Adiyah 49 Tosora, Wajo. She graduated from her elementary school in 2008. She finished his junior and high school at MTsN Binanga Mamuju and MAN Mamuju in 2008-2014. After listed as one of the higher alumni in his Madrasah, she enrolled in a university and Alhamdulillah he was listed as a student in UIN Alauddin at English Education Department, Tarbiyah and Teaching Faculty. In university, she met some great people in an English meeting club. It was HMJ PBI (Himpunan Mahasiswa Jurusan Pendidikan Bahasa Inggris) 2017 dan NGC (New Generation Club), where she found many valuable experiences.
