PREFACE

Bismillahirrahmanirrahim.

In the name of God, the Most Gracious, the Most Merciful

Assalamualaikum warahmatullahi wabarakatuh.

Academic Symposium on Integrating Knowledge (ASIK) has successfully organized the 1st Academic Symposium on Integrating Knowledge (The 1st ASIK) on 20th – 21st June 2014 in Universitas Islam Negeri Alauddin Makassar, Indonesia. The theme of this International Symposium is “Integrating Knowledge with Science and Religion”. The 1st ASIK covers many disciplines in education, science, technology, language, social sciences, health, and religion involved in the research.

This International Symposium is expected to present prospect for all academicians, scientists, and researchers to encourage, impart and share ideas in promoting research network among interdisciplinary field of studies. There are more than 50 papers presented by academicians, scientists, and researchers from Asia.

Finally, I would like to extend my gratitude to all those who are involved in the publication of the proceedings of the 1st ASIK 2014. It is hoped that this proceeding will contribute to the development on integrating knowledge with science and religion particularly in Asia and among the international academicians, scientists, and researchers in general.

FOREWORDS

Bismillahirrahmanirrahim.

In the name of God, the Most Gracious, the Most Merciful

Assalamualaikum warahmatullahi wabarakatuh.

I would like to express praises and gratitude to Almighty Allah because it is only by His permission that I am able to convey my forewords in the proceedings of the 1st Academic Symposium on Integrating Knowledge (The 1st ASIK) 20-14 organized by Academic Symposium on Integrating Knowledge (ASIK) in collaboration with Learning Center UIN Alauddin Makassar, Faculty of Education UTM, Ibnu Sina Institute for Fundamental Science UTM.

I would like to take this opportunity to congratulate and compliment the committee members of this International Symposium who have consistently work very hard to produce this proceedings.

The publication of this proceeding is expected to benefit as many parties as possible and become a reference for those who wish to gain further information on integrating knowledge with science and religion.

Finally, I hope that through such initiatives of knowledge integration with science and religion event and publication of symposium's proceeding, a higher quality of research and publication can be multiplied in the future.

Best regards,

Prof. Dr. Hadi Nur

Jl. Sultan Alauddin No. 63 Makassar, Indonesia

muhammadyaumi@gmail.com

ABSTRACT

This research aimed at identifying mechanism of social media integration, designing model of social media integration to promote student-centered learning, and describing the acceptability of social media integration model for teaching and learning in Eastern Indonesian Islamic higher education classroom setting. The research method was a research and development (R & D). The instruments for collecting data were questionnaires, interview guide, document study, and observation sheet by using mixed method (qualitative and quantitative) to analyze data. The qualitative data were analysed through data reduction, displays, conclusion and verification. Quantitative data were analyzed based on criteria; strongly agree, agree, disagree, and disagree. The results indicated the mechanism of social media integration that are currently done by the lecturers are analyzing task, selecting materials and social media types, and using the social media into teaching and learning. The acceptable, practical model developed to integrate social media into learning and teaching is ADUK, the acronym of Analyze learner, task, and competence, Decide suitable social media to be integrated, Utilize suitable instructional material, and Keep Tract of Evaluation and Revision. The acceptability of social media integration model indicated that there were 24 (96,6%) respondents agree and extremely agree ADUK as model of social media integration into teaching and learning and only 1 (4%) of the respondents said the competence should precede the task to be analyzed.

KEYWORDS: Social media, student-cantered learning, Research and Development

1 INTRODUCTION

Recently, Internet users in Indonesia have shown an increasing trend. The number of Internet users reaches 63 million people in 2012 (APJJI, 2012), became 74.57 million in 2013 (MarkPlus Insight, 2014), and may reach 107 million in 2014, and 139 million users in 2015 (Semuel, 2014). Following the increased usage of the Internet, social media users also increase. Survey result of the Directorate General of Information and Public Communication, Ministry of Communications and Information shows that 95% of Internet users accesses social media like Facebook and twitter (Investor Daily, 2014).

The use of social media does not only occur for the social network interaction but also can be used for learning and teaching includes discussion forums, blogs, wikis, and 3D virtual worlds (Victoria University, 2014). This evidence allows users to modify existing content, create new content, personalize their Web experiences, and build online educational networks around shared interests (Lightle, 2010). Various social media are perceived to have positive contribution

in learning. The dominant use of social media in face to face classroom and synchronous and asynchronous distant learning are Facebook, twitter, YouTube, blogs, Myspace, wikis, LinkedIn, flicker, and slide share (Moran, Seaman, and Kane, 2011).

These media, however, have not been integrated systematically in Indonesian classroom setting, even in Islamic higher education. Internet network, technology unavailability, and lack of lecturers' ability become dominant reasons of the integration activity. Meanwhile, students' activity to accomplish the assignment outside the classroom setting is more dependent on using the Internet rather than entering library to manually access the physical information from book, journal, newspaper, etc. The students prefer accessing goggle, web-blog, e-book, YouTube, 4shared, and other online software to looking for physical books in library's catalog (Damopolii AND Yaumi, 2013). The phenomenon indicates students' high expectation in learning with technology especially social media as online software.

Using social media in learning is imperative to create student-centered learning. The inclusion of social media like a wiki has been so useful for engaging students in class participation that the instructor has started using a wiki as a key component in a face-to-face undergraduate course (Hu and Johnston, 2011). Student-centered learning enables personalized and customized learning, social and emotional support, collaborative and authentic learning experiences, assessment for learning (Jo An and Reigeluth, 2011). Besides, student-centered learning empowers students to construct their own knowledge and enables them to think critically, learn to work in teams and solve problems collectively (Neo and Tse Kian, 2003).

Unfortunately, the integration of social media and the implementation of student-centered learning have not been formally integrated in many Islamic higher educations including in eastern Indonesia. The integration of technology in the classroom has not been considering the theory of learning and instruction and the implementation of student-centered learning done by some lecturers has not along with the suitable technology integration. Consequently, the integration of technology into education runs very slowly. Therefore, designing and developing the strategy for technology integration into teaching to promote student-centered learning is very important to initiate.

Based on the phenomena as explained in the background above, the formulation of the problem statement in this study as follows;

- 1 How is the mechanism of social media integration that is currently done by the leacturers in five Islamic Higher Education in Eastern Indonesia?
- 2How is the integration of social media to promote student-centered learning in Islamic Higher Education of Eastern Indonesia?
- 3How is the acceptability of social media integration model for teaching and learning in Eastern Indonesian Islamic higher education classroom setting?

2 LITERATURE REVIEW

2.1 Technology Integration

The term integration or integrating in this part refers to technology integration. Generally, technology integration is defined as the use of technology tools in general content areas in education in order to allow students to apply computer and technology skills to learning and problem-solving (Wikipedia, 2014: 1). Technology integration concerns with application of technology to construct communication, interaction, environment, culture, learning, and instruction (Spector, 2012: 154). Technology integration is also defined as using computers

effectively and efficiently in the general content areas to allow students to learn how to apply computer skills in meaningful ways (Dockstader, 1999).

The most specific definition of technology integration is relevant to the diffuse on of innovation theory. Diffusion is the process in which an innovation is communicated through certain channels overtime among the members a social system. An innovation is an idea, practice, or object that is perceived as new by an individual or other unit of adoption (Rogers, 2003). This theory involves technology integration model that includes six phases; access technological pedagogical content knowledge, determine relative advantage, decide an objectives and assessments, design integration strategies, prepare the instructional strategies, prepare instructional environment, and evaluate and revise integration strategies (Roblyer and Doering, 2010: 51).

2. 2 Concept of Social Media

Social media is a widespread phenomenon focused on connecting, sharing, and collaborating (Bosman and Zagenczyk, 2011: 3). Social media are also defined as a place where everyone can add or edit information. It is a web where digital tools allow users to create, change and publish dynamic content (Shafique et al, 2010). Both definitions underline the functional perspectives, but do not focus on technology application. Social media is perceived as using tools (online software) like Facebook, Wiki, YouTube, bulletin board, LinkedIn, blogging, and twittering as learning resource (Liu, 2010).

Similar to this, the other definition also perceives social media as sites used to transform from a way of pushing content outward to a way of inviting conversation, of exchanging information, and of invoking unparalleled individual, industry, societal, and even global change. The sites included Facebook, Twitter, Myspace, LinkedIn, Slide Share, and Flickr, blogs, wikis, video (both on YouTube and elsewhere), and podcasts(Moran, Seaman, and Tinti, 2011). In this research, social media are defined as sites that include Facebook, Wiki, Twitter, Myspace, LinkedIn, Slide Share, Flickr, Blogs, YouTube used to connect, share, and collaborate with people in learning.

2. 3. Student-Centered Learning

Student Cantered Instruction (SCI) is not a new approach in education. It emerged together with the development of constructivism theory in progressive education that focused on the child development. This theory claimed that learning is active. It involves reaching out of the mind, organic assimilation starting from within. Literally, we must take our stand with the child and our departure from him. It is he and not the subject-matter which determines both quality and quantity of learning (Dewey in Richardson, 1997). This statement describes the vital position of student as the central part of learning to be addressed and learned. The emphasis of SCI is on working together, in pairs, in groups, and as a whole class (Jones, 2007). Their teacher helps them to develop their knowledge, skills, and attitudes. Therefore, the essential elements of SCI are set learning challenge, define learning goals and objectives, determine learning strategy, set performance requirements, construct knowledge, monitor and assess learning, provide feedback, and communicate results (Ang et al, 2001).

3 RESEARCH METHODOLOGY

This is a research and development (R & D). It is a process used to develop and validate educational product (Borg and Gall, 1983: 772). R & D is a boundary of qualitative and quantitative (*mixed*) approach as well as a bridge of the gap between a research and educational practice (Semiawan, 2007). It is also considered as “the systematic study of design, development, and evaluation processes with the aim of establishing an empirical basis for the creation of instructional and non-instructional products and tools and new or enhanced models that govern their development (Richey and Klein, 2007:1).”

The major steps in R & D cycle used to develop instructional products according to Borg and Gall (1983: 775) are (1) research and information collecting, (2) planning, (3) developing preliminary form of product, (4) preliminary field testing, (5) main product revision, (6) main field testing, (7) operational product revision, (8) operational field testing, (9) final product division, and (10) dissemination. However, these steps have been simplified into three steps, namely preliminary research, design and development, and validation and evaluation.

The instruments for collecting data are questionnaires, interview guide, study document, and observation sheet. Questionnaires are used to collect data about the acceptability of using practical social media integration model in Islamic higher education classroom setting including students' perception and experts' validation on the models. Interview guide is to guide the researcher in collecting data about the acceptability and compatibility in order to know the practicality of the model. The document is studied to design suitable social media integration. The last is observation sheet to get the data about the mechanism of social media integration that is currently done by the lecturers in Islamic higher education of eastern Indonesia, which is designed to promote student-centered learning. The sources of data were 25 lecturers, 50 postgraduate students, 5 administration staffs including some relevant documents from 5 Islamic higher educations (UIN Alauddin, in eastern Indonesia, which have postgraduate program under the cooperation of UIN Alauddin. In analysing data, the researcher used a mixed method (qualitative and quantitative) that means the qualitative data obtained through interview and observation were analysed by using qualitative approach that include data reduction, displays, conclusion and verification. The quantitative analysis was used to analyze data obtained through questionnaires that will be calculated by using score and transformed into quantitative symbols to produce interval data based on criteria; strongly agree, agree, disagree, and disagree.

4 RESULTS AND DISCUSSION

4.1 The Mechanism of Social Media Integration

50 postgraduate students were interviewed through focus group discussion and 25 lecturers from five Islamic higher education Institutes were observed. 25 syllabuses were collected to obtain the mechanism of social media integration. The types of social media used in teaching and learning process can be described by using interaction; lecturer-student interaction and student-student interaction. The types of social media used in lecturer-student interaction are web-blog, YouTube, Facebook, Skype, other are shown in figure 1.

Figure 1. Social Media Used in Lecturer-Student Interaction

The lecturers used web-blog to manage learning resources such as articles, modules, students' paper, and other links. YouTube is to explore the relevant best practices implemented by other parts to be good example for the students to use. Facebook is for sending messages group simple discussion. Skype is for teleconference in specific class such as instructional technology class. Other means other social media types such as WeChat and WhatsApp that are integrated into smartphones but are not regularly used in learning process.

Different from social media used in lecturer-student interaction, the types of social media used in student-student interaction are Facebook, Twitter, YouTube, Flickr, Myspace, Wiki, LinkedIn, Slide Share, 4shared, Web-Blog. It means the types of social media in students' interaction are more varied and frequent. Students accessed social media five times more than the lecturers did. Activity rate, access need, and social media adaptation become strong indicators of the differences. The lecturers have more complex activity relating to teaching and education, research, and community service as a tri dharma duty. The lecturers' need in accessing websites is more motivated by looking for article journal and e-book. However, the lecturers' adaptation with social media must be recognized late comparing with students. Based on the interview result, the sequence of using social media in student-student interaction is shown in figure 2.

Figure 2. Social Media Sequence Used in Lecturer-Student Interaction

Facebook is the most popular used in student-student interaction. The students used the Facebook for announcement, group discussion, video conference, and sending message. Twitter and Flickr are for following others and expressing spontaneous ideas. The students used YouTube to save their movies and download the relevant resource for displaying when doing presentation. Myspace and LinkedIn are for writing 1-2 pages of simple paper before completing the final paper. 4Shared and slide Share are used to back up the article, paper, or some sources and some relevant PowerPoints that are obtained from the Internet and from classroom presentation. Wiki is mostly used to get some concept, definition, and theory when writing paper. WeChat and WhatsApp are to share information and chat among the small group when doing assignment.

The mechanism of using those social media has not been designed systematically. Based on the interview results, all lecturers and students used social media based on consideration of accessibility, tryability, and observability. As long as the students are easy to access, try, observe and use instructional materials through those media, the lecturers consider to involve the social media. But, paying fully attention the result of observation and document like the lecturers syllabus indicates the mechanism of integrating social media into teaching can be described in figure 3.

Figure 3. The Mechanism of Social Media Integration

Analyzing task is done when the lecturers describe the goal and objectives of instruction and determine the evaluation criteria that include students' participation, presentation, paper, midterm, and final project. Selecting instructional materials and media, and using social media into teaching are constructed in describing instructional activities such as pre-activity, primary, and the last activity. Using social media is also described into various type of students' assignment such as chapter reading, group discussion, and individual task.

4.2 The Integration of Social Media to Promote Student-Centered Learning

After collecting data on the types of social media used by the lecturers and students in teaching and learning and the mechanism of social media integration that is currently done at the Islamic higher education in eastern Indonesia, the process of integration has not been designed systematically by considering the ideal process of technology integration. Consequently, the usage of social media is not consistently integrated to promote the improvement of cognitive, affective, and psychomotor domain of learning objectives. Therefore, involving the suitable mechanism of social media integration is important to do. Model of social media integration has been developed through four steps, as follows:

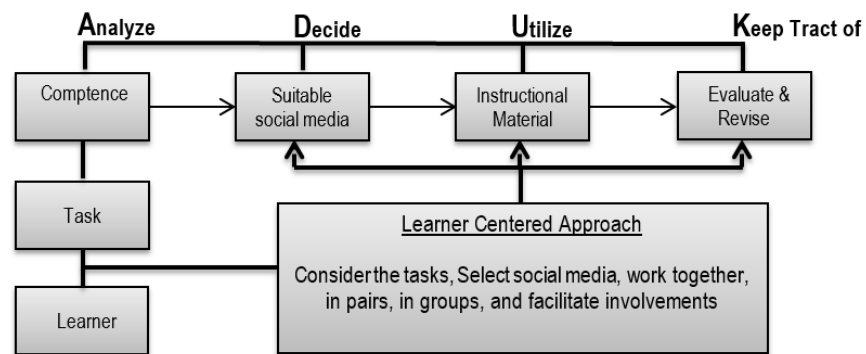

Figure 4. Model of Social Media Integration in Learning Process

- A = Analyze learner, task, and competence
- D = Decide suitable social media to be integrated
- U = Utilize suitable instructional material
- K = Keep Tract of Evaluation and Revision.

4.2.1 Analyze Learner, Task, and Competence

The first step of social media integration in learning process is analyzing learner, task, and competence. General learner characteristics such as age, gender, work experience, education, and ethnicity should be considered before designing and implementing instructional activities. Likewise, specific characteristics such as learning styles, multiple intelligences, and culturally diverse learners give positive contributing in designing effective instruction including for integrating social media in teaching and learning. Task analysis refers to the types of job,

assignment, or content by considering to work together with Subject Matter Expert (SME) as an individual who master the specific area. Working with SME to have suitable topic in a meaningful manner, accurate content, and detail information that should be included in the task. Analyzing competence includes determining skill, knowledge, and attitudes that are needed by learner to be successful.

4.2.2 Decide Suitable Social Media

Deciding suitable media refers to selecting various social media, which is appropriate with learner, task, and competence. Basically, all social media types can be integrated for teaching and learning, but for the sake of effectiveness and efficiency, those media can be classified into three parts; (1) media for saving text, (2) media for picture, audio, and video, and (3) interactive media. Media for saving text includes web-blog, 4shared, slide share, LinkedIn, and wiki. Media for saving picture, audio, and video consists of Flickr, Myspace, and YouTube. Interactive media covers Facebook, Twitter, WeChat, and WhatsApp. Some social media are complementary and the others are overlapping. Selecting one or two media for each part decreases confusion of determining the suitable media to be integrated in teaching and learning.

4.2.3 Utilize Suitable Instructional Material

This step refers to preparing guidance for learners, instructional materials, and assessment. Instructional materials include all forms of instruction that cover lecturer's guides, student reading lists, PowerPoint presentations, learning methods, and social media types for learning. The suitable instructional materials are dependent on learner characteristics and the availability of the existing relevant materials that can be accessed including the relevant provided websites.

4.2.4 Keep Tract of Evaluation and Revision

The last step for integrating social media into teaching and learning is keeping track of evaluation and revision. Evaluation is collecting data about the weaknesses and strength of integrating social media in teaching and learning to make the instruction better. Revision is summarizing and interpreting the result of evaluation to identify some difficulties encounter by the learner in obtaining the objectives. The purpose is to improve, correct, and reselect the social media types that have been integrated into teaching and learning.

4.3 The Acceptability of Social Media Integration Model

After developing model of social media integration for teaching and learning, four experts (two experts of instructional technology and two other expert of ICT) were involved. After the validation, some recommendations were given as described in table 1.

Table 1. Experts' Validation

STEPS	RECOMMENDATION
Analyze Learner, Task, and Competence	<ol style="list-style-type: none"> 1. Focus on learner learning styles: auditory, visual, and kinesthetic learners 2. Specify competence based on Bloom Taxonomy; cognitive, affective, and psychomotor domains 3. Address the tasks to fulfill knowledge, attitude, and skill.
Decide Suitable Social Media	<ol style="list-style-type: none"> 1. Integrate five social media; web-blog, 4shared, Myspace, YouTube, and Twitter.
Utilize Suitable Instructional Material	<ol style="list-style-type: none"> 1. Provide better access of instructional materials 2. Manage appropriate instructional resources.
Keep Tract of Evaluation and Revision	<ol style="list-style-type: none"> 1. Use peer evaluation 2. Involve others to be observer.

The draft of model has been corrected by considering the experts' validation and should be emphasized on the specific guidelines as shown in recommendation to make process of integration better understood by the students. The further acceptability of social media integration model is field try that involved 25 lecturers from five Islamic higher education institutes. The result of questionnaires is shown in figure 4.

Figure 5. The Acceptability Social Media Integration Model

Based on the data above, all steps were accepted to be used for the social media integration process. Except the first step, analyze learner, task, and competence refused by 1 (4%) of the respondent. Interview result indicated that the sequence of task and competence

should be changed that means one respondent agree when competence preceded the task because determining the knowledge, attitude, and skill should be put in objectives and then followed by task.

5 CONCLUSION

The mechanism of social media integration can be done by identifying the suitable social media type that is suitable with teacher-student interaction and student-student interaction. The social media type in students' interaction is more varied and frequent than teacher-student interaction. The types are Facebook, Twitter, YouTube, Flickr, Myspace, Wiki, LinkedIn, Slide Share, 4shared, Web-Blog. In teacher-student interaction, social media types include web-blog, YouTube, Facebook, Skype. The mechanism of integration are analyzing task, selecting materials and social media types, and using the social media into teaching. The acceptable, practical model developed to integrate social media into learning and teaching is ADUK, the acronym of Analyze learner, task, and competence, Decide suitable social media to be integrated, Utilize suitable instructional material, and Keep Tract of Evaluation and Revision.

ACKNOWLEDGEMENTS

This research was conducted in five Islamic higher education Institutes funded by Research and Community Service Institute (LP2M) of UIN Alauddin, Indonesia in 2013-2014. Special thanks are given to the Head of LP2M of UIN Alauddin, Director Postgraduate Program of UIN Alauddin, STAIN Palopo, STAIN Ternate, UMPAR, STAIN AMBON, STAIN Gorontalo.
