ACKNOWLEDGEMENTS

Alhamdulillah Rabbil Alamin, The Researcher praises her highest gratitude to god Allah SWT who has been giving her the mercy and the blessing for completing this thesis. Salam and Shalawat are due to the highly Prophet Muhammad SAW, his families and followers until the end of the world. The researcher really thanks to the people who pray, guide and help her along this time, she realize these people have a lot contribute during her research and the writing of this thesis. They are:

1. The researcher beloved parents **Nurhayati** and The late **Mr. Abdul Rahman, S.Pd** with their pray, love, affection, motivate, and advice. So, the researcher can complete this thesis well.
2. **Prof. Hamdan Juhannis. M.A.,Ph.D.**, the Rector of Alauddin State Islamic University of Alauddin Makassar.
3. **Prof. Dr. H. Musafir Pababbari, M.Ag.**, the former Rector of Alauddin State Islamic University of Makassar 2015-2019 period.
4. **Dr. H. Marjuni, M.Pd.I**, the Dean of Tarbiyah and Teaching Science Faculty of UIN Alauddin Makassar
5. **Dr. H. Muh. Amri, LC.**, the former Dean of Tarbiyah and Teaching Science Faculty of UIN Alauddin Makassar 2015-2019 period.
6. **Dra. Hj. St. Azisah, M. Ed. St. Ph. D.**, the Head of English Education Department and **Dr. Sitti Nurpahmi, M.Pd.** the secretary of English Education Department of Tarbiyah and Teaching Faculty of UIN Alauddin Makassar as well as all the staff.
7. **Dr. Kamsinah M.Pd.I.** as the first consultant and **Dra. St. Nurjannah Yunus Tekeng , M.Ed., M.A.** as the second consultant. Thanks for giving her valuable time and patience, advice, and support her during the assistance, and guided her in completing of thesis.
8. Special thanks to **NGC (New Generation Club)**. As the english club meeting, as a family and brotherhood

9. The Students of **PBI class 1-2 and 3-4** at the fifth semester academic year 2016/2017 of English Education Department who sacrificed their time and activities for being the subject of this research.
10. All her siblings. Her brother **Zachrawan Nur**, her Sister **Sri Reskiawati Rahman** and, her young brother **Insan Al Ghifari Rahman**, thanks being her facilitator, supporter and mood booster.
11. Special thanks for her motivator **Irvan, S. Hut**. Who always gives support, advice; mood booster and motivation since the researcher begin her research until doing this thesis.
12. All her beloved friends in **English Education Department (2015)** especially in **group 3 and 4**. It cannot be mentioned one by one but overall than you for the friendship, togetherness and supporting her.
13. Deeply thanks for her lovely Friendship **Yuliana Ibrahim, Munawarah, Jihan Alfaizah, Nur Hamida, Wahyuni Ramadani, Nurul Sulastri, and, Reski Amaliyah Kadir** for their supporting, caring, helping, laughing, craziness, solidarity and be the place for sharing.
14. Finally, for everyone connected with the complement of the thesis may Allah SWT blesses us. *Amin Yaa Rabbal Alamin*

Title : *The Influence of Self-Efficacy on Students writing Performance at the Fifth Semester of English education Departmen UIN Alauddin Makassar*
Consultant I : Dr. Kamsinah M.Pd.I.
Consultant II : Dra. St. Nurjannah Yunus Tekeng, M.Ed., M.A.

The objective of this research was to find out the significant influence of self-efficacy on students writing performance. This research was quantitative Descriptive with statistic inferential parametric research and the design of the research was ex post facto design. The subject of the research was the students of the English Education Departement in the academic year 2017/2018. The instrument that the researcher used in this research to collect data was writing tests and questionnaire of self-efficacy. The findings of the research showed that there was a significant influence of self-efficacy on students writing performance at the fifth-semester students of the English Education Department.

The results of this research showed that the coefficient influence of students' self-efficacy on writing performance was 9.841 and the coefficient influences the value of both variables was 0.736. It was shown that the students who got a high score in writing tests; they also got a high score for their self-efficacy. Based on the results of the research it could be concluded that there was a significant influence of self-efficacy on students writing performance. By having high self-efficacy, students were able to write better and produce a good piece of writing than those who have low self-efficacy.

CHAPTER I

INTRODUCTION

This chapter discusses the research background that leads to research problem, hypotheses, research objectives, research significance, research scope and definitions of operational.

A. Background

Writing is claimed to play an important role in intellectual development and career preparation (Gere, 1985). Intellectual development refers to a person's ability and the changes that occur in learning to think and reason about the world around them and Career preparation is one of the most important developmental processes in a student's college experience especially in the field of writing. According to Dyson (1995), writing is not merely an individual activity but a process that requires social interaction. It is important to master writing because the language proficiency of learners is often measured by their writing performance. Generally, it is assumed that a person who has a good writing ability automatically she or he has substantial language mastery (Wening, 2016).

In writing, there are several parts that can be seen and analyzed; one of them is writing achievement which is the result of their success in doing something that can be seen from their score. Students get score if they have completed an assignment or a task. Thus writing achievement signed the score obtained by students from the writing process until the product is present (Anggraini, 2017). Furthermore, Hattie and Eric (2013) state that writing achievement is characterized by the ability to produce text that extends across numbered

paragraphs that unite sentences and bound paragraphs into a meaningful whole, and which accommodate the needs of potential readers. It can be interpreted that writing achievement shows the position of how students are able to make sentences into good paragraphs. Writing achievement can be seen in the final writing result which is called writing performance.

Student's writing performance is mostly indicated by the quality of the writing product, which focuses on its clarity, originality, and correctness (Rahim, Abdullah, and Ishak, 2008). Excellent Expertise in English writing is crucial to enhance university students' writing performance, thus academic success. Regardless of its significance, many students consider English writing as difficult, challenging and frustrating because their writing is generally poor in terms of vocabulary, organization, content and the use of linguistic features (Liao and Wong, 2010).

Similarly, Harris (1974) stated that there are five linguistic components of writing namely content, form, grammar, style, and mechanics. So, when students do their writing, five components above will guide them to produce a good piece of writing. Furthermore, students also involve the non-linguistic aspect. As stated by McLeod (1987) in Pajares and Johnson (1993) that writing is as much an emotional as a cognitive activity, affective components strongly influence all phases of the writing process. It means that in the process of writing, a person's ability to write is not only influenced by the component linguistics but there is also a non-linguistic component called the psychological factor where these

psychological factors play a role in support the cognitive component in the outcomes of their writing.

One of the psychological factors that are influence the students writing achievement is self-efficacy; self-efficacy is the beliefs learners have about whether or not they are capable of completing an activity (Bandura, 1986). Self-efficacy is personal judgments of one's capabilities to organize and execute courses of action to attain designated goals, to assess its level, generality, and strength across activities and contexts (Bandura, 1997). Self-efficacy is part of a large theoretical framework known as social cognitive theory, which postulates that human achievement depends on interactions between one's behaviors, personal factors and environmental conditions (Bandura.1997). Concerning the link between personal factors and behaviors, much research shows that students' self-efficacy beliefs influence such achievement behaviors as a choice of tasks, effort, persistence, and achievement (Schunk.1995).

Self-efficacy is one of the personality aspects that important for us because it will give effect to someone to determine what they will have to do and give the motivation to be a success; it includes the beliefs that come from our self to reach an achievement. Self-efficacy also defined as judgment one's ability to complete the task where one's judgment will give motivated to doing something (Anggraini, 2017). Compared with students who doubt their learning capabilities, those with high self-efficacy for acquiring a skill or performing a task participate more readily, work harder, persist longer when they encounter difficulties, and achieve at higher levels (Schunk and Zimmerman, 2007). Self-efficacy, however, is not

the only influence on achievement, but the high self-efficacy will not produce competent performance when requisite knowledge and skills are lacking. Outcome expectations, or anticipated consequences of actions (e.g., making a high grade on a test after studying hard), are influential because learners engage in activities they believe will lead to positive outcomes (Shell, Murphy, & Bruning, 1989). The researcher has conducted preliminary research.

Based on the researchers' pre-observations in a writing class at the Department of English Education UIN Alauddin Makassar, researchers found problems in writing related to self-efficacy. First, there are some students who were not confident to write because they were afraid to use incorrect grammar so they were hesitant to make sentences into good paragraphs. Second, students feel that they lack vocabulary so they had difficulty developing ideas. Based on the two problems faced by students in writing, researchers are interested in examining the problem with the title *"The Influence of Self-efficacy on Student Writing Performance at the Fifth Semester of English Education Department, Faculty of Tarbiyah and Teaching Science at UIN Alauddin Makassar"*.

Researcher had chosen students of the English Education Department fifth semester as the objects because they have learned about writing in several semesters and the researcher wanted to see how far their writing achievement in producing good and interesting writing. Besides, in the fifth semester, they have been learned about self-efficacy in the course of psychology that is why the researcher had chosen the fifth semester to be researched.

Individuals who have high self-efficacy will always strive to be able to resolve the existing problems, and not easy to despair when faced with adversity and always convinced that God's grace is always there.

As has been described in surah Yusuf: 87

يَبْنِي أَذْهَبُوا فَتَحَسَّسُوا مِنْ يُوسُفَ وَأَخِيهِ وَلَا تَأْيِسُوا مِنْ رَوْحِ اللَّهِ إِنَّهُ لَا يَأْيِسُ مِنْ رَوْحِ اللَّهِ إِلَّا

الْقَوْمُ الْكَافِرُونَ ﴿٨٧﴾

Meaning:

“Oh my Sons, go and find out about Yusuf and his brother and despair not of relief from Allah SWT. Indeed, no one despairs of relief from Allah SWT except the disbelieving people.” (Q.S. Yusuf: 87).

In Surat Al-Alaq verse 4 Allah SWT says:

الَّذِي عَلَّمَ بِالْقَلَمِ ﴿٤﴾

Meaning:

"Who Teaches (mankind) by parcel of Kalam" it mean, God teaches mankind by reading and writing.

B. Research Problem

Based on the previous explanation of the problem in the background, the researcher formulated a specific question:

“Is there any significant influence of Self-efficacy on students writing performance at fifth semester students of English Education Department UIN Alauddin Makassar?”

C. Objective of the Research

“To find out the significant influence of Self-efficacy on Students Writing Performance at fifth semester students of English Education Department UIN Alauddin Makassar”

D. Research Significances

1. Theoretical Significance

This study did not only explain the influence of self-efficacy on the students writing performance but also the link between self-efficacy and writing performance. The results of this study are expected to provide empirical evidence and support the assumption of a significant Influence of self-efficacy in writing performance students in class.

2. Practical Significance

The significances of this research expects to:

a. The English Teacher

The results of this study can be used by English teachers, especially in teaching writing. They can know the influence of self-affection in

learning writing is high. Teachers can also overcome this by looking at the results of this study.

b. The Next Researcher

For the next researcher, this research is beneficial as a reference for conducting the next research.

E. *Research Scope*

The researcher limits the scope just focus on students writing achievement of English Education Department at The Fifth Semester, to find out the significant influence of self-efficacy in their writing performance.

F. *Operational Definition of Terms*

1. Writing Performance

Writing is one of language skills while in doing it the students need to gather the ideas then put them in form of written words. By performing writing, the students deliver their thoughts and show their language ability. (Wening, 2016). Writing performance is the students writing activity that show their ability to make a good piece of writing result.

In this research the writing activity is done for one day within 30 minutes where the researcher will give a test to the students. The test is about the descriptive text were includes, content, organization, and vocabulary.

2. Self-efficacy

Gredler (2009) states that self-efficacy is the learner's belief in his or her capabilities to successfully manage situations that may include unpredictable elements. Students self-efficacy is the belief and confidence in the ability to do such a thing in getting success while doing the task.

Self-efficacy can be measured by the scale of efficacy, used a Likert scale which starts from scale 1 to 4. The number of items in the self-efficacy scale is 26. High and low self-efficacy of students seen from the efficacy scale score is obtained. The higher score shows that the students have a high self-efficacy.

CHAPTER II

LITERATURE REVIEW

This chapter is divided into four main sections, namely reviews of related research findings, pertinent ideas, theoretical framework and hypotheses.

A. *Review of Literature*

1. Review of Related Research Findings

Shahini and Nemati, (2015) Studied “*Internet Self-Efficacy in Writing Processes Task Performance*”. Found that results indicated that there were positive and significant correlations between the stages of process writing and Internet self-efficacy. Discussions, suggestions, and implications for research and practice are proposed.

Puspita Wening (2016), studied *The Correlation between Students’ Self-Efficacy and their Writing Performance at SMAN 1 Kalirejo*. Found that there is a significant correlation between students’ self-efficacy and their writing performance which was shown by the result of r-value (0.495) \bar{r} -table (0.374). From that result, the null hypothesis (H0) is rejected and the research hypothesis (H1) is accepted. Thus, their self-efficacy in writing will affect their writing performance.

Riana Agreani (2017) Studied *The Correlation between Students’ Self – Efficacy and Writing Achievement at the Second Semester Of Students’ English Department at Stkip PGRI West Sumatera In 2015/20136 academic Year*. Found that from the research results, researchers use two instruments to collect data: documents and self-efficacy polls. Where this document contains results from the

final exam of the semester. The utility took 18 results of the exam and gave a poll to the student. Based on the poll has found 12 students in the categorize have high self-efficacy, and 8 students have moderate self-efficacy. After collecting the researcher data conducting the analysis and in the end researchers found that there was no correlation between self-efficacy and writing, where t count = 0108 is smaller than t table = 0479 and $n = 18$.

Feby Inggriyani and Nurul Fazriyah (2017) studied *Self Efficacy on Narrative Writing Ability of Primary School Student*. Found that from the retrieval of data obtained through tests and analysis by simple linear regression with the help of SPSS version 17 software. The results of study showed that self-efficacy has an effect on the ability to writing narrative class V student in nation primary school at Lengkong subdistrict Bandung city.

Shah et al. (2011) do the study about *self-efficacy in the writing of Malaysian ESL learners*. Then their findings confirm that there is a significant positive correlation between writing self-efficacy and writing performance in English. However, the correlation between general self-efficacy and writing performance is found to only have a medium positive correlation.

Other study was also done by Chea and Shumow (2014). *The Relationships among Writing Self-Efficacy, Writing Goal Orientation, and Writing Achievement*. They found that writing self-efficacy was significantly and positively correlated with writing achievement. The results reveal that writing

self-efficacy was related to writing mastery goal orientation and to writing achievement.

Pajares (2003) in his study *demonstrates that students' confidence in their writing capabilities influence their writing motivation as well as various writing outcomes in school*. The assumption of beliefs which students create, develop, and hold to be true about themselves are vital forces in their success or failure in school. The thing that makes this study is different from these previous studies was that in this study, the correspondents were the senior high school students.

According to the previous researchers above, the researcher concluded that most of them founded there is an effective influence of Self-efficacy in the education field. For some people they include the influence of these two in education field, while each of researchers has their style to write their ideas, to collect the data, to generate their findings and to draw the conclusion. What distinguishes this research with previous studies was the purpose of the research that is focus to find out the significant influence of self-efficacy, and the type of research that using descriptive quantitative with statistic inferential parametric.

2. Some Pertinent Ideas

a. Writing Performance

1. Definition of Writing

According to Oshima and Hogue (2007), writing is a kind of writing that we use in high school and college classes. It means that a written language should be clear and good to the reader because it cannot directly as for much more information or delivering the message.

Mayers (2005) states that writing is a way to produce language you do naturally when you speak. Writing is also an action a process of discovering and organizing our ideas, putting them on a piece of paper and reshaping and revising them.

Writing is also very important for us; it can help good socialization, express our ideas, feelings, and our opinion. We can see the importance of writing in daily life and in our social life, for example when we write an application letter. Writing can also be a hobby for peoples and to spend our time and we can also get money from writing (Yenita, Tanjung and Septy, 2014). The kind of text that the researcher uses is Descriptive Text.

a. Deskriptive Text

Descriptive Text is a kind of text with a purpose to give information. The context of this kind of text is the description of a particular thing, animal, person, or others, for instance: our pets or a person we know well. It differs from Report which describes things, animals, persons, or others in general (Gerot and Wignell, 1994). The social function of descriptive Text is to describe a particular person, place, or thing. A good description has a unifying idea and everything that support the idea. A description shows and allows the reader to see, hear, and feel the subject matter clearly (Ilmi, 2015).

The generic structure of descriptive text consists of Identification and Description. Identification: Identifies the phenomenon to be described. Description: Describes parts, qualities, characteristics, etc. (Hammond, 1992). Descriptive text also has some language features. The language features are very simple and easy to be taught but in the descriptive text usually, use Present Tense, contain some adjective clause and sometimes it also uses past tense if the thing to be described does not exist.

2. Definition of Performance

According to the behavioral approach in management, performance is the quantity or quality of something produced or services provided by someone who does the job (Luthans, 2005). Performance is the result of work both in quality and quantity achieved by a person in carrying out the duties according to the responsibilities given (Mangkunagara, 2002).

Performance is the result or output of a process (Nurlaila, 2010). According to Rivai and Basri (2005) it is the outcome or level of a person's overall success over a certain period of carrying out a task compared to various possibilities, such as a standard of work, a target or a specified target or predefined criteria have been agreed together.

3. Definition of Writing Performance

Puspita Wening (2016), Writing Performance is one of skill in learning language acquired by an individual to write meaningful words or sentences grammatically correct and well organized without giving the teaching first. Riana Angraini (2015), Writing should be mastered by students' universities especially in the English Department, because writing is a complex process that reflects the other skills, for example without reading we will find difficulties to write. In writing students should be able to arrange the word to be a good sentence until becoming coherence paragraph, able to compose their thought, and also have good self-confidence, moreover, we should have high self-efficacy, because it will make us success to reach the goals in writing.

Kane (2000) mentions that there are three components in writing namely grammar, usage, and mechanics. Grammar means the rules which structure of the language. While usage is the way a writer designates the rules of less basic and binding sort, concerning how he/she should use the language in certain situations. Then, mechanics refers to the appearance of words to how they are spelled or arranged on paper. The rules gathered under the heading of mechanics attempt to make writing consistent and clear. Along with mechanics, it includes punctuation.

Meanwhile, Harris (1974) defines that there are some general components in writing process namely a) content: the substances of the writing; the idea expressed, b) form: the organization of the context, c) grammar: the employment of grammatical form and syntactic patterns, d) style: the choice of structure and lexical item to give a particular tone flavor to writing, and e) Mechanic: the use of the graphic convention of the language.

4. Aspects of Writing Performance

a. Grammar

Jeffrey Coghill and Stacy Magendanz (2003) state, the grammar of a language is the set of rules that govern its structure. Grammar determines how words are arranged to form meaningful units. Grammar or commonly called the structure of words that was used to create a sentence, composed well and has a meaning.

b. Main Idea

Hisam Sam (2019) the main idea is the basic design of arrayed in mind, an idea or an idea/thoughts of a paragraph/underlying a paragraph. The main idea is usually located at the beginning of a sentence in a paragraph or sentence format as usual also called main. This is the main sentence that will be explained by the next sentences or commonly called also with explanatory sentence.

c. Paragraph

Arifin and s. Amran Tasai (2006) said that Paragraph is a set of sentences that talk about an idea or topic. Sentences in a paragraph show the unity of the mind or have any relation in shaping an idea or topic. In other words, paragraphs are a combination of several sentences that form a board and a clear explanation of a main topic or idea.

b. Self-Efficacy

1. The definition of Self-Efficacy

Bandura (1994) defines self-efficacy as people's beliefs about their capabilities to produce designated levels of performance that exercise influence over events that affect their lives. He says that self-efficacy beliefs determine how people feel, think, motivate themselves and behave. If students can convince themselves that they can do it, students will certainly be able to do the things they want to achieve.

Bandura (1997) also describes self-efficacy as a determinant of how individuals feel, motivate themselves, think about something and behave. In its application, confidence in one's abilities depends on two things; estimate the level of difficulty of a task and skill individuals face the task.

Alwisol (2009) states that self-efficacy as self-perfection about how good students can function in certain situations, self-efficacy related to the self-confidence to take the expected action. The

statements explain that self-efficacy can also make the students moving unconsciously the abilities by the confidence that students had.

2. Aspects of Self-efficacy

According to Bandura (1997), Self-efficacy in each student will be different from one student to another, based on three Aspects.

a. Level

This dimension relates to the degree of difficulty of the task when the student feels capable of doing the task. If individuals are faced with tasks that are arranged according to the level of difficulty, then self-efficacy students may be limited to tasks that are easy, moderate, or even include the most difficult tasks, by the limits of perceived ability to meet the demands of behavior that needed at each level. This dimension has implications for the selection of behaviors that are perceived to be able to do and avoid behavior that is beyond the limits of the ability that it feels.

b. Strength

This dimension is related to the level of strength of beliefs or student's expectations regarding the abilities. Weak hope is easily shaken by experiences that do not support. Conversely, solid expectations encourage students to survive in their efforts, although there is probably less supportive experience. This dimension is usually directly related to the dimensions of levels, namely the higher

level of difficulty of the task, the weaker the perceived confidence to solve it.

c. Generalization

This dimension relates to the area of behavior in which students feel confident in their abilities. Students can feel confident about their abilities. It is limited to a particular activity and situation or in a variety of activities and situations that vary. In the article Bandura (2006: 307-319) entitled the guide for constructing the Self-efficacy Scales, it is confirmed that the three dimensions are most accurate in explaining one's self-efficacy.

B. Theoretical Framework

The most important thing in writing is how to make the reader interested to read the results of writing, therefore student should have confidence and belief in developing the ideas. In pouring an idea into a piece of writing, students must have a level of thought and a good understanding to be able to find creative ideas for great results. Eric Gould, Robert DiYanni, and William Smith (1990s) state that writing is a creative act; the act of writing is creative because it requires to interpret or to make sense of something such as an experience, a text, and an event.

Gredler (2009: 366) states that self-efficacy is the learner's belief in his or her capabilities to successfully manage situations that may include unpredictable elements. According to Bandura (1997) self-efficacy beliefs or habits of self that can be retrieved, modified, enhanced or lowered through one

or a combination of four sources, namely performance accomplishment category, type experience, social persuasion, emotional/physiological states. Relate to this, Santrock (2007) said that self-efficacy is beliefs in the ability in mastering the situation and produce something profitable.

Self-efficacy can affect the way of thinking, learning and the extent to which one can understand the information. Self-efficacy is a self-assessment of the aspects about the extent or how much confidence to develop capabilities. The confidence of students will greatly affect their success in doing things that are wanted. Student's beliefs will greatly affect their success in doing the things that he wants.

Students able to initiate their study activities with self-efficacy and develop applicable self-learning strategies are more likely to achieve better because non-self-regulated students are not really involved in the learning process and consequently, they might be subjected to any kind shallow knowledge and low academic achievement (Zimmerman 1986). Individuals with a low sense of self-efficacy will process negative thoughts and think of task's demands as threatening not as challenging and therefore set low objectives for themselves (Bandura 1994).

Writing something also requires thinking skills and relies on creative ideas to produce works that are of interest to readers. This is certainly not easy and requires several strategies where someone has something that is the foundation for thinking and understanding information. Bandura (1994) defines

self-efficacy as follows: self-efficacy is a person's belief in his ability to produce planned levels of performance, where the ability is trained, driven by influential events in one's life.

Furthermore, through experiences that are passed, directly and indirectly, a student can measure one's self-confidence by reflecting or learning from some of the things that have been done before. Moreover, Bandura (1994) states that “students who evaluate themselves as poor writers tend to perform being reluctant to engage in writing works and making brief or incomplete piece of writing while students with higher writing self-efficacy have been found to complete writing tasks at a higher standard”. It means that students who have high self-efficacy will get higher mark in writing tasks, and on the contrary.

Based on the explanation above about Self-efficacy, the researcher formulated the blueprint of self-efficacy:

Table 1:
Aspects and Indicators of Self-Efficacy

Aspects	Indicators
The Level Of Difficulty in Writing (Level)	<ul style="list-style-type: none"> - Able to complete the tasks from easy to difficult - Able to compose the sentence correctly into a paragraph
The level of power of individual beliefs (Strength)	<ul style="list-style-type: none"> - Survive and tenacious in working on writing task - Have confidence and strong stability in completing writing task
The wide field behaviors (Generally)	<ul style="list-style-type: none"> - The readiness to face the situation in writing task

Adapted from Nursilawati (2010) and Wibawa (2016).

C. Hypotheses

1. H_0 accepted and H_1 rejected = There is no a significant influence
2. H_0 Rejected and H_1 accepted = There is a significant influence

CHAPTER III

RESEARCH METHOD

This chapter explains the research used to reveal the focus issues in this research. It contains a research setting, design, population, sample, variables, instrumentation, and data collection procedures employed in this research.

A. *Research Settings*

1. Place

The location of this research is located on campus II UIN Alauddin Makassar, Tarbiyah and Teaching Faculty. Jln. Sultan Alauddin No. 63, Romangpolong, Kec. Somba Opu, Makassar City of South Sulawesi, postal code 92113.

2. Time

The time of research in carrying out this research is two days. The first day of doing the test is writing test and the second day distributing Self-Efficacy questionnaire.

B. *Research Design*

According to Setiyadi (2006) quantitative design aims to investigate a theory that has been existed and the researcher should look for the data to support or reject it. The design in this research used *ex-post facto*. It is a research in which the independent variables have occurred when researchers began with the observation of the variables bound in a study (Hammadi, 2010). Ex-post facto research methodically an experimental study that tested the hypothesis, but does not provide specific treatments for whatever reason to provide treatment.

The method used Descriptive Quantitative research with statistic inferential pragmatic. Research method based on the philosophy of positivism used to examine the population or a particular sample, sampling techniques are generally done randomly, data collection, using research instruments, data analysis is quantitative/ statistical to test the predefined hypothesis (Sugiyono, 2017).

Inferential statistics is a data analysis technique used to determine the extent of similarity between the results obtained from a sample with the results to be gained on the population as a whole. Inferential statistics help researchers to find out if the results obtained from a sample can be generalized in the population (Creswell, 2008). Parametric statistics are techniques based on the assumption that the captured data has a normal distribution and uses the interval and ratio data (Nisfianoor, 2009). This research is a research that aims to explain the existing phenomenon by using the numbers to restore the characteristics of individuals or groups (Syamsudin & Damayanti, 2011).

C. Research Variable

Variable is a quality in which researchers study and make conclusions from it. This research has two variables called independent variable and dependent variable.

- 1) The independent variable is a free variable that influences or the cause of the change or emergence of the dependent variable (Sugiyono, 2007). In this research, the independent variable is the Self-efficacy.

- 2) A dependent variable is a bound variable that is affected or becomes a result, because of the free variable (Sugiyono, 2007). In this research, the dependent variable is Writing Performance.

D. Research Participant

The participants in this research were the students of English Education Department at State Islamic University of Alauddin Makassar especially in the fifth semester, Class 1-2 and 3-4 with 84 students. The students at this level must have had a good ability especially in the field of writing. This is certainly related to how the influence of self-efficacy of students in writing. The variable had a positive influence on the motivation of studying students in class and home, therefore researchers choose students majoring in State Islamic University of Alauddin Makassar as a research location.

The sampling technique used in this research was the random sampling. The type of the random sampling used in this research is simple random sampling techniques, where researchers take the sample randomly without regard to strata that exist in the population (Sugiyono, 2011).

D. Research Instrument

Questionnaires (*self-efficacy scale*) is a technique of collecting data through forms containing questions submitted in writing to a person or group of people to obtain answers or responses and information required by the researcher. This research used Scale Likert with 26 items that reveal the attitudes of respondents. This Scale contains a statement which could be answered by the respondent

freely. This method used to obtain data about the Self-Efficacy perception of the respondents. The questions that have been used were about the motivation and behavior of the participant to their self. In these questionnaires, the researcher adopted directly from Wibawa (2016) about self-efficacy by used Likert scale. This instrument has the value of validity and reliability, it aims to strengthen and validate the research data.

Further, Sugiyono (2012) states the Likert scale used to measure the attitudes, opinions, and preconceptions of a person or group of people about social phenomena, where it is consisting of **Strong Agree, Agree, less Agree, Disagree and Not Agree**. The researcher only using four different categories of Likert scale namely: **Strong Agree, Agree, Disagree and Not Agree**. The reason the researcher only uses four categories and excludes one category is quite important, because if that option is provided then the respondent will tend to select it so that the data obtained will be less informative.

Table 2:
Likert Scale Measurement Category

No	Answer Choices	Score Item	
		Favorable	unfavorable
1	Strong Agree	4	1
2	Agree	3	2
3	Disagree	2	3
4	Not Agree	1	4

Test is a collection of questions or problems as well as a means of measuring to certain variables that the form of capabilities, skills, intelligence, attitudes or talents that are owned by individuals or groups. According to Allen Philips (1979), the test is interpreted as a tool used to obtain data about a characteristic of an individual or group.

The kind of test that the researcher used was written test. Written test is a test in the implementation of more emphasis on the use of paper and pencil which is the main instrument, the test is done by using handwriting. The kind of text the researcher used was descriptive text. This text used to know the students writing achievement. The instrument aims to measure the writing performance of students in producing a good and interesting according to the rules in writing.

E. Data Collection Procedures

In this stage, the data collection procedures are follows:

1. Preparation

In this stage, the researcher explained briefly about the intent of the research to be conducted to the respondent in the classroom. After that, the researcher prepares the first instrument that will be given.

2. Data Collection and Processing

In this stage, the researcher began with the collection of data through giving a test to the respondent to measure their writing performance. Then the researcher spread the questionnaire to the students/respondents to measure their self-efficacy. After that, the researcher collected the data to analyze.

F. Data Analysis Technique

The data obtained through the test of writing and the questionnaires of self-efficacy.

- a Scoring and classifying the students' descriptive writing test by the writing rubric score. The rubric used as the assessment guide that describes the criteria of the score that the researcher needed to assign students' results of writing.

**Table 3:
Writing Score Rubric**

Item Analysis	Score	Criteria of Scoring
Content	40-37	Excellent: Knowledgeable, substantive, etc.
	36-32	Good: Some knowledge of subject-adequate range
	31-27	Fair: Limited knowledge of subject-little substance
	26-23	Poor: Does not show knowledge of subject-non substantive.

Organization	25-23	Excellent: Fluent expression-ideas clearly stated
	22-19	Good: Somewhat choppy-loosely organized but main idea stand out
	18-15	Fair: Not fluent-ideas confused or disconnected
	14-12	Poor: Does not communicative-no organization
Vocabulary	25-23	Excellent: Sophisticated range-effective word/idiom choice and usage
	22-19	Good: Adequate range-occasional errors of word/idiom form, choice, usage but meaning not obscured
	18-15	Fair: Limited range-frequent errors of word/idiom form, choice, and usage
	14-11	Poor: Essentially translation little knowledge of English vocabulary, idioms, and word form.
Total Score	90	

(Adopted from Gay, 1981)

UNIVERSITAS ISLAM NEGERI

Table 4:
Writing Classification Rubric

Scale	Classification
80-90	Excellent
69-79	Good
58-68	Fair
46-56	Poor

(Adopted from Gay, 1981)

- b. Scoring the students questionnaire by using Likert scale and classifying the students score by using interval score:

Table 5:
Self-Efficacy Questionnaire Score Classification

Interval Score	Classification
104 - 80	High
79 - 60	Average
59 - 40	Low

- c. To find the influence of the independent variable toward the dependent variable used data analysis Simple Linear Regression. Simple regression is based on functional or causal relationships one independent variable with a single dependent variable.

General linear regression equation is:

$$\hat{Y} = a + bX$$

Where:

\hat{y} = subject of the dependent variable in the predicted

a = the price of Y when $X = 0$ (constant prices) 30

b = regression coefficient or the direction of the figure, which shows the figure increase or decrease the dependent variable based on the variables independent. When $b (+)$ then rises, and when the $(-)$ then the decline.

X = the subject on an independent variable has a specific value

Technically price **b** is the tangent of the (comparison) between the length of the line is the dependent variable and independent variable.

$$\text{Price } b = r S_y/S_x$$

$$\text{Price } a = Y - bX$$

Where:

The correlation coefficient r = product-moment between the variable X with variable Y

$$S_y = Y \text{ variable raw Byway}$$

$$S_x = X \text{ variable raw Byway}$$

So the price of **b** is a function of the correlation coefficient. When the coefficient of the correlation is high, then the price of big **b** also, conversely a low correlation coefficient when then the price of **b** also low (small). Also, when the coefficient of correlation is negative then price **b** is also negative, and vice versa when the coefficient correlation is positive then the price **b** is also positive.

Besides, the price of **a** and **b** can be searched by the following formula:

$$a = \frac{(\sum Y_i)(\sum X_i^2) - (\sum X_i)(\sum X_i Y_i)}{n \sum X_i^2 - (\sum X_i)^2}$$

$$b = \frac{n \sum X_i Y_i - (\sum X_i)(\sum Y_i)}{n \sum X_i^2 - (\sum X_i)^2}$$

(Sugiyono, 2007)

CHAPTER IV

FINDINGS AND DISCUSSION

This chapter presents the research findings presented in the data descriptions and discussions. In this chapter, researchers analyze the data consisting of Writing Test and questionnaires results from Self-Efficacy.

A. Findings

The findings of this research were based on the results of the data analysis. Two analysis data have done by the researcher that was the data about the writing test and questionnaire of Self-Efficacy. The researcher gave the students a writing test to measure their writing achievement in descriptive text and for the questionnaire was to measure the students' self-efficacy in three aspects, level, Strength and generality.

1. Classification of Students' Writing Test Score

The table 1 shows the frequency distribution and the percentage of final writing test score in the fifth-semester Students of English Education Department. After the researcher giving the students writing tests to see how far the students writing achievement in their writing performance to produce a good piece of writing, then the results were seen at the frequency of the table below:

Table 6:
Students' Writing Test Score

Interval Score	Category	Number of the students	Percentage
80-90	Excellent	35	41.6%
69-79	Good	33	39.28%
58-68	Fair	12	14.28%
46-56	Poor	4	4.93%

From the table, it can be concluded that the results of the students' written test, the most percentage were in the excellent category.

2. Classification of Students' Self-Efficacy Questionnaire Score

The following table showed the distribution of frequency and percentage of final score from self-efficacy at the fifth semester students of English Education Department. The following table shows the distribution of frequency and percentage of final score from self-efficacy at the fifth semester students of English Education Department. After the researcher gave the students' questionnaires to measure their self-beliefs based on the aspects of self-efficacy.

Table 7:
Students' Self-Efficacy Questionnaires Score

Interval	Score	Number of the students	Percentage
104 - 80	High	26	30.95%
79 - 60	Average	52	61.90%
59 - 40	Low	6	7.14%

From the table, it can be concluded that the results of the students' Self-Efficacy Questionnaire score, the most percentage were in the average category.

The test result of the normality of both variables using the value of the residue indicates that the significant value is greater than 0.05. It can be concluded that data from variables with a normal distribution with a significant value of $0.200 > 0.05$.

Table 8:
Test Normality of the Variables

One-Sample Kolmogorov-Smirnov Test		
		Unstandardized Residual
N		84
Normal Parameters ^{a,b}	Mean	.0000000
	Std. Deviation	6.38989974
Most Extreme Differences	Absolute	.075
	Positive	.061
	Negative	-.075
Test Statistic		.075
Asymp. Sig. (2-tailed)		.200 ^{c,d}
a. Test distribution is Normal.		
b. Calculated from data.		
c. Lilliefors Significance Correction.		
d. This is a lower bound of the true significance.		

To know whether there is any correlation between students' Self-efficacy and Writing Performance, both variables were analyzed by using Pearson Product Moment Correlation on SPSS version 25. From the calculation of Pearson Product Moment Correlation, the researcher found that

the coefficient significant of students' self-efficacy in writing performance was $0.000 > 0.1$. For the significance level 0.1 of the hypothesis, the coefficient correlation is higher than the critical value of r-table ($9.840 > 3.413$). Therefore, for the first hypothesis, the null hypothesis (H_0) is rejected and the research hypothesis (H_1) is accepted.

Table 9:
The Coefficients Data of Self-efficacy in Students Writing Performance

Coefficients ^a						
Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	13.466	6.206		2.170	.033
	Self-Efficacy	.806	.082	.736	9.840	.000

a. Dependent Variable: Writing Performance

b. Independent Variable: Self-Efficacy

Regression models illustrate that the regression equation is $Y = 13,466 + (0.806 X)$. Constant 13.466 contains the meaning that the consistent value of the participation variables is 13.466. The X coefficient states that every 1% increase in self-efficacy value, the value of participation will increase by 0.806. The coefficient regression is positive, so it can be said that there is an influence of self-efficacy towards writing performance students.

In addition, it can be seen that the test results of regression equation with a significance value of 0.000. This value is under the significance of 0.05, thus the coefficient or regression model is significant or it can be said that self-efficacy significantly affects the students writing achievement to write a descriptive text.

There is an influence between self-efficacy on students writing performance because self-efficacy is one's psychological factor in performing duty.

Further, simple regression was done to analyze how far the contribution of self-efficacy in students' writing performance. The variable entered is the independent variable which gives influence to the dependent variable at the table 5. Then the result shows the coefficient determination was 0.536. The following tables then show the computation result of the regression:

Table 10:
The Value of Coefficient Determination/Regression (SPSS)

Variables Entered/Removed ^a			
Model	Variables Entered	Variables Removed	Method
1	Self-Efficacy	.	Enter
a. Dependent Variable: Writing Performance			
b. All requested variables entered.			

Model Summary				
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.736 ^{ab}	.541	.536	6.429
a. Predictors: (Constant), Self-Efficacy				
b. Dependent Variable: Writing Performance				

From the analysis above, the adjusted R Square shows 0.541, it is interpreted that Self-efficacy influenced 54.1% toward writing performance and 45.9% influenced by other factors. The result of this research showed that there was a positive correlation between students' self-efficacy and their writing performance with a coefficient correlation of 0.736

B. Discussions

The result of this research can be concluded that the influence of self-efficacy in writing performance is significant at the level 0.1, the coefficient correlation is higher than the critical value of $r\text{-table } 9.840 > 3.413$. It means that the null hypothesis (H_0) is rejected and the research hypothesis (H_1) is accepted. The coefficient determination (adjust R square) of self-efficacy in student writing performance is 53.6%. This proves that self-efficacy has a major contribution to the achievement of student writing. It can also be seen from the correlation value (R) of the two variables is very high (0.736).

Self-efficacy is one of the key factors in determining student achievement. This effectiveness ultimately leads to success or failure in learning the language, including in producing good writing because students' self-efficacy of the learning situation contributes to the way students behave to their ability in a given task and achieve success in conducting any activities in the social learning process (Susanto, Sutarsiyah & Sinaga, 2015).

Additionally, the current research finding proved that there is a significant correlation between students' self-efficacy and their writing. Regarding this result, the researcher concludes that self-efficacy is one of the psychological factors influenced the writing performance. Learners who have high self-efficacy are inclined to have greater achievement in writing text. The result also supported by research conducted by Wening (2016). That research showed that self-efficacy is one of the psychological factors that affect writing performance. Self-efficacy as

an affective domain in the learning process affects the psychomotor and cognitive. Students who have self-efficacy may enjoy the learning process when students write a text;

As mentioned in the frame of theories, self-efficacy plays an important role in learning achievement. Self-efficacy which includes in non-linguistic aspect that comes from students' inherent condition influences the desire of students to learn and explore their writing achievement that they have. Bandura (1994) states that "students who evaluate themselves as poor writers tend to perform being reluctant to engage in writing works and making brief or incomplete piece of writing while students with higher writing self-efficacy have been found to complete writing tasks at a higher standard". It means that students who have a high self-efficacy can produce a good piece of writing.

Many factors or aspects can influence writing achievement. Self-efficacy is only one of many factors that influence students writing achievement. However, self-efficacy itself cannot be ignored in teaching-learning process, it seems that students' self-efficacy has an impact on students' writing performance. Lunenburg (2011) explains that self-efficacy has powerful effects on learning, motivation, and performance, because people try to learn and perform only those tasks that they believe they will be able to perform successfully. Students who have high self-efficacy toward writing tend easier to write a text than the students who have low self-efficacy. Self-efficacy plays a role in the decision to write well and not because self-efficacy is one of characteristic of affective domain influence the successful in cognitive and psychomotor domain. (Bandura, 1997)

The finding of this research proves the theory of Bandura about self-efficacy that can affect student to gain success in the learning proses or in doing something. This research also supports prior research that in the students believe that they have high capability in doing general activities in writing, such as doing revision and reading a lot to improve in which those activities indirectly affect their writing performance particularly in the aspect of content.

CHAPTER V

CONCLUSION AND SUGGESTIONS

This chapter presents the conclusions as well as the few suggestions of this research. Suggestions are taken based on findings and conclusions obtained in this research.

A. *Conclusion*

Based on the findings in the previous chapter, the researcher has a conclusion. There is a significant effect of self-efficacy on student writing performance where the contribution of self-efficacy to writing performance was 54.1% and the coefficient correlation was high (0.736). Due to this fact, the null hypothesis H_0 was rejected and H_1 was accepted. Thus, prediction can be put forth that when the students have high self-efficacy toward their writing achievement in English, their writing performance tends to be better.

In this research, the students believe that they have high self-efficacy in doing general activities in writing performance, such as doing revision and arrange a good paragraphs to the correlation ide which their activities indirectly affect their writing performance particularly in aspect of content. On the contrary, they have low self-belief in doing the specific activities related to the writing, such as, using vocabulary, word form in which those beliefs affect their capability in writing particularly in grammar content. From the explanation, the teacher in the school should train the students to have high self-efficacy in all aspects of self-efficacy that is generality, level and strength; so that the students can product a good writing that can interest the reader.

B. *Suggestions*

Based on the conclusions above, the researcher proposes a suggestion concerning the research finding as follow:

1. Because 54.1% writing performance is influenced by self-efficacy researchers suggest to subsequent researchers to find 45.9% affected by other factors.
2. Since in this research the researcher used descriptive text for students' writing test, the next researcher is suggested to have the writing test in different type of text, such as recount or narrative text where the students familiar with that, so that their writing performance can be explored more.
3. Since this study found that there was a significant influenced of self-efficacy students writing performance, the next researcher is suggested to explore what factors of self-efficacy that influence the students self-efficacy or how to increase students' self-efficacy so that their writing performance can be better.
4. After commit this research, it is found that students' self-efficacy influence their writing performance and also have correlation each other. So, is suggested for the teacher to train students' self-efficacy in the classroom. It can be done by giving a regular treatment such as writing assignment and assessment which can motivate the students to have a good writing and can product an interesting writing.

APPENDIX I
Blue Print Questionnaire of Self-Efficacy

Name : Riska Dewanti

Nim : 20400115051

Title : “The Influence of Self-efficacy in Students’ Writing Performance”

Aspects	Indicators	Items		No of items
		Favorable	Unfavorable	
The Level Of Difficulty in Writing (Level)	- Able to complete tasks that are easy to difficult	1,3,5	2,4,6	6
	- Able to compose the sentence correctly into a paragraph	7,9,11	8,10	5
The level of power individual beliefs (Strength)	- Survive and tenacious in working on writing task	13,15,17	12,14	5
	- Have confidence and a strong stability in completing writing task	19,21	16,18,20	5
The wide field behaviors (Generally)	- The readiness to face the situation in writing task	23,25	22,24,26	5
JUMLAH				25

Adapted from Anger Apri Wibawa (2016).

APPENDIX II
Questionnaire of Self-Efficacy

NO	Items	SD	D	A	SA
1	I can perform quite well even in difficult circumstances				
2	I doubt I was able to do a variety of different tasks effectively				
3	I put all my effort into completing a job.				
4	In difficult circumstances I was unable to do anything.				
5	I sure I am able to do a variety of different tasks effectively.				
6	I do a job only half-heartedly.				
7	I can stay calm when facing difficulties because I can rely on my abilities.				
8	I was not able to predict how to handle unexpected jobs.				
9	I easily find several solutions when dealing with problems.				
10	I feel anxious when facing difficulties because of my ability.				
11	I am grateful to be able to think long, so I know how to handle unexpected situations.				
12	I am unable to find solutions when dealing with problems				
13	I try as much as possible to complete my work as complicated as anything.				
14	I give up easily in learning new things				
15	Others' doubts about my ability make me more motivated to strive to achieve success.				
16	When faced with something that seemed complicated, I was reluctant to try it				
17	I never give up when I fail to learn something new				
18	I have doubts about being able to complete every level of tasks from easy to difficult				
19	I was able to complete each level of tasks from easy to difficult well				
20	I felt I could only do one or two jobs				
21	I feel increasingly challenged to work better when faced with problems				
22	I will do my work with a minimum effort				

23	I'm sure I can master various fields of science				
24	I easily give up when others doubt my ability				
25	I feel more able to do most of the tasks than anyone else				
26	I doubt I can get results that are important to me

APPENDIX III
Writing Test

STUDENT ANSWER SHEET

Directions:

1. Make a Descriptive text with a theme:
 - a. Tourist Attraction
 - b. Animal
 - c. Transportation
2. Make a maximum of 3 paragraphs.
3. Use correct language according to the grammar rules in order to attract the reader.

SCORE

ANSWER:

APPENDIX IV
Table 6: Scoring of Writing Test and Self-Efficacy

STUDENT ANSWER SHEET

INSTRUCTIONS

1. Make a Descriptive Text with a theme:
 - a. Tourist Attraction
 - b. Animal
 - c. Transportation
2. Make a maximum of five paragraphs
3. Use correct language according to the grammar rules in order to attract the reader

SCORE

36

ANSWER

My Beloved Motorcycle.

I call it Jerry, it has red and white colours, and the detail has a black colour. The brand is Yamaha, it has two wheels, it can accompany me anywhere.

The type of my favorite motorcycle is underbone. If you are familiar with Vespa type motorcycles, then I believe you can imagine what my motorcycle is like. The dominant color is white. It has some wheel type of rim and standard tire.

The original rear view mirror was broken and I replace it with a smaller one. Last year I replace the original shock absorber with the new one.

The new shock absorber is black. A very distinctive part of my motorcycle is the seat. It is because I modified it a little bit from the original shape.

If I decided to add some foam rubber on it, start from the middle part of the seat up to the back part. It makes the back part of the seat to be higher than the front part and create a border which separated the driver seat and the passenger seat.

BICYCLES

Bicycles are a means of transportation where the chassis is made of iron and has two wheels of rubber origin. Bikes are very easy to use for traveling and are very environmentally friendly, according to history books, bikes were created by Leonardo da Vinci.

We can use a bicycle by ~~pedaling~~ pedaling pedal with both feet, driving it with both hands. The bike is also equipped with front and rear brakes to withstand the speed of the bike, as well as other additional accessories. The size of the bike also varies according to need.

ANSWER:

Car

A car made of transport which means for one to seven passengers. car is also called automobile which derived from the Greek word "auto" and Greek word "mobile". This directly means as "self-moving". since cars do not need horse or other external power. They got their power from an engine.

There are two functional elements of car. First is to convert chemical potential energy fuel to kinetic energy which in fact is utilized to move the vehicle. The second is to transmit generated power to the wheels through various mechanism. also to utilize the generated power to other parts such as radiator fan, fuel pump, compressor.

ANSWER

Rabbit:

Rabbits are cute animals and have a thick hair. They have two eyes, four legs, two ears, and a tail. They have become the main attraction, so many people buy rabbits because of their hair color, which is really fascinating.

They have two long ears. Rabbits could hear better and know the voices of their predators when approaching. Rabbit eyes look so funny and sometimes moving up.

ANSWER

TRICYCLE

Tricycle is a traditional transportation from Indonesia. The transportation, namely tricycle, is modified by bicycle and the important thing from the transportation is there are something in front of the bicycle ~~for the~~ used to be a chair for passengers. The transportation also only have 3 tires, the two tires beside the passenger sit place in left and right then at the last tire in behind. So, a bicycle not complete anymore because the tire of the bicycle have to detachable and sit behind the chair of passengers.

PETUNJUK PENGISIAN

Skala ini terdiri dari sejumlah pernyataan yang mungkin sesuai dengan kondisi diri Saudara/i sekarang ini. Saudara/i dimohon untuk membaca setiap pernyataan dengan seksama. Kemudian Saudara/i diminta **memilih pilihan jawaban yang paling sesuai dengan kondisi diri Saudara/i sekarang**. Pilihlah jawaban dengan memberi tanda (X) pada kolom jawaban. Terdapat empat (4) pilihan jawaban untuk setiap pernyataan, yaitu :

- SS** : Apabila Saudara/i merasa **Sangat Setuju** dengan pernyataan yang ada
- S** : Apabila Saudara/i merasa **Setuju** dengan pernyataan yang ada
- TS** : Apabila Saudara/i merasa **Tidak Setuju** dengan pernyataan yang ada
- STS** : Apabila Saudara/i merasa **Sangat Tidak Setuju** dengan pernyataan yang ada

Jika Saudara/i ingin mengganti jawaban, berilah tanda (X) pada jawaban yang dirasa kurang sesuai. Kemudian Saudara/i berikan tanda (X) pada jawaban yang dirasa lebih sesuai dengan kondisi Saudara/i saat ini.

Tidak ada jawaban yang benar atau salah karena jawaban yang Saudara/i berikan merupakan kondisi yang Saudara/i rasakan saat ini. Oleh sebab itu, Saudara/i dimohon mengisi skala ini secara jujur.

Jangan sampai ada nomor yang terlewatkan. Periksa kembali jawaban Saudara/i setelah selesai mengerjakan.

Selamat Mengerjakan
