ACKNOWLEDGMENT

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

Alhamdulillahirabbil Alamin, the writer praises to the Almighty Allah SWT for His blessing and mercy so the writer can complete this thesis. Peace and salutation are addressed to the beloved and chosen messenger Muhammad SAW, for his model and guidance in the life.

The writer would like to express her deepest gratitude to her beloved parents, her father **Luthfi Dahri, S. Pd.** and her mother **Hj. Ratnawati, S. Pd.** Her wonderful sisters **Nurul Akidah Luthfi, S.E** and **Puspa Nur Qalby Luthfi** and her little brother **Muhammad Irsyad Zaky Luthfi**. Who have patiently given their moral values, financial support, advice, love, motivation, and sincere prayer for her safety and successful.

The writer realizes that this thesis couldn't be completed without getting assistance, guidance, support, prayer, understanding and encouragement from many people. Therefore, the writer would like to express her deepest gratitude to the following :

1. The Rector of UIN Alauddin Makassar, Prof. Dr. H. Qadir Gassing. H.T, M.A., for his advice during the period when the writer studied at the university.
2. The Dean of Adab and Humanities Faculty, Prof. Dr. Mardan, M.Ag and his staff, the Head of English and Literature Department, Dr. Abd. Muin, M. Hum, and secretary of English and Literature Department Serliah Nur, S.Pd. M.Hum. M.Ed, for their support, help and encouragement.
3. Her first and second consultant, Dr. H. Barsihannor, M. Ag. and Syahrini Junaid, S.S., M. Pd. who have given comments, guidance, suggestions, corrections, and over all support since the preliminary part of this thesis until the end.
4. All lecturers of Adab and Humanities Faculty of UIN Alauddin Makassar who have contributed and transferred their knowledge to her which is very helpful and useful. May Allah SWT bless them.

5. Her prodigious friend, Zulkifli Makmur, S.Hum, who always gives her support, help, and motivation during her study and writing this thesis.
6. Her outstanding and impressive friends, Resa Primayandi, S.Hum., Sri Wayuni Ningsih, S.Hum. Burhanuddin, Chaerul Umam, S.H.i, Muhammad Asry, Muchlis Rahman, Indah Harliani, Lisnawanti, Rahma Rahman, S.Hum., Riska, Nur Wahidah, Dahlia Ramli, Rasma Samma, S.H.i., and all friends in class AG. 1, AG. 2, AG. 3, and AG. 4 of 2009 English and Literature Department of UIN Alauddin Makassar who always give her advice and support and have accompanied her in many fabulous college times. Thanks for always being spectacular friends.
7. Her friends in Adab and Humanities Faculty, Afdal, S.Hum., Junaedi Aqsha, S. Hum., Muh. Ilham Achdar, S. Hum., Rusni, S. Hum., Muh. Taufik Syam, S.Hum., Imran, S. Hum., Muh. Kayyiz, Alfian Nur Rizky, Delukman A, S. Hum., and Fajeruddin Syakir, S.IP. who always give their help, share, and motivation to her during her study at university.
8. All members of KisSA (Komunitas Seni Adab), HmI (Himpunan mahasiswa Islam) Komisariat Adab Cabang Gowa Raya, BEM (Badan Eksekutif Mahasiswa) of Adab and Humanities Faculty, KMP (Kerukunan Mahasiswa Pinrang) Koperti UIN Alauddin Makassar, and BOHEMIAN Community which have given her support, happiness, inspiration, and braveness to achieve many great things in the future.

Finally to all people, who pay sympathy to her. She hopes God bless them.

Billahi taufiq wal hidayah

May Allah Swt always be with us. Amen.

The Writer

Title : **Digital Culture in Dan Brown's Novel "Digital Fortress"**
(Sociology of Literature Approach)
Consultant I : **H. Barsihannor**
Consultant II : **Syahrani Junaid**

This thesis studied about digital culture in Digital Fortress novel by Dan Brown. The aim of this thesis is to analyze and to describe the social emotional components and the negative effect of digital culture in the novel.

The writer used descriptive qualitative method and used note taking instrument. The writer used the theory of digital culture by Charlie Gere and sociology of literature approach to express and explain social emotional components and the negative effects of digital culture in the novel, then finding the relation between the context of the novel and the social condition in current society.

In this thesis, the writer found two social emotional components of digital culture. They are the protection of personal security and privacy, recognize the threat and how to face it. The writer also found five negative effects of digital culture. They are deviation in using digital media, it consumes people live, changes of mindset, patterns of interaction and activities between people are changed and the last is pressure and competition are increased.

This thesis implicates to make people realize how digital culture has contaminated life and implicitly formed the perspective in looking at surroundings. Expectantly, this thesis can stimulate the students of English Literature to learn more about the influence of digital culture to the contemporary literary works.

CHAPTER I

INTRODUCTION

A. Background

Heber in (Semi, 2006: 28) reveals that literature is writing in the broadest sense. Generally literature is fiction texts, both poetry and prose whose value depends on the depth of thought and expression of the soul.

Literature in early is tool for teaching, then means beautiful collection of writings, both oral and written, with the nature of creativity and imaginative (Ratna, 2007: 458).

From the view of the literary meaning above, the writer concludes that the literature is the work of thinking, feeling, and human activities creatively, that outlined in oral and written form, using beautiful language media. The disclosure is the result of seriously contemplation, so it will have good grade to be enjoyed by readers.

Literature is commonly divided into many kinds of work. One of them is novel. Reeve (2004: 74) states that “novel have the power to bring us from one place to another, even in the place that we do not know before, it can bring us from one time to another, bring us back to the past, through the present time or even moves us to the unknown future. It also can change our sense feeling from a sense of sadness to sense of happiness. Beside that novel is a picture or real life and manners, and of the time in which it is written. The romance, in lofty and elevated language, describe what never happened nor is likely to happen”.

Based on quotation above, the writer concludes that through the literary work, especially novel, we can get pleasure and enjoyment and also can learn and understand about many things in this life. All literary works have a close relationship with social life conditions, that is why novel can influence the society's attitude and life, and as the result of society, the condition can influence the development of the literature which is related to

human life, such as social life and the culture. Novel also connect with many experiences of life, and that is why the writer take a novel as the object of her research.

Grebsten in (Damono, 1989: 14) states that “literary work cannot be fully understood when separated from the environment or culture or civilization which had produced it. It should be studied in the broadest context and not just itself. Every literary work is the result of the interplay of complex social factors and cultural. Literary work itself is a complex cultural object. That is mean literary work is not a phenomenon of its own.

Based on quotation above, the writer assumes that literary work presents a picture of life, and life itself is mostly made up of social reality. In this sense, life includes relationships between communities, between people, and between the events that occur in one's mind. Thus, a literary work never departed from social vacuum. It means literary work written based on society's social lives particularly and tells the cultures that underlying it.

Digital culture is the degree to which our everyday lives are becoming dominated by digital technology, whether in terms of leisure, work or bureaucracy. This dominance is reflected in other areas, including the worlds of finance, technology, scientific research, media and telecommunications. Out of this situation a particular set of cultural responses has emerged, for example, in art, music, design, film, literature and elsewhere (Charlie Gere, 2008: 11).

Digital culture affects many elements of our lives that seemed to be firm and constant. Concepts such as community, publicity, personal rights, ownership and value are beginning to be renewed and changed. The natural environment has always been a key factor in the development and shaping of communities, this solid foundation seems to be disappearing into a digital environment.

“Digital Fortress” a novel by Dan Brown is one of techno-thriller novel. The novel scrutinizes the world of encrypting and decrypting of data and it contains many things about digital. The novel also explores the theme of government surveillance of electronically

stored information on the private lives of citizens, and the possible civil liberties and ethical implications using such technology. From this novel, the writer concludes that the story of this novel is dominated by digital technology which is affect many elements especially society, and it can be called as digital culture. There are many plot twists and surprises throughout the story, and a wealth of interesting characters. That is why the writer is interesting to take this novel as the object of her reserch.

Based on the background above, the writer tries to analyze digital culture in “Digital Fortress” novel by Dan Brown. The writer will analyze the digital culture by sociology of literature approach.

B. Problem Statement

Based on the real fact, the writer focused on research questions as follows:

1. What are the social emotional components of digital culture in the novel “Digital Fortress”?
2. What are the effects of digital culture based on the novel?

C. Objective of Research

The objectives of the study can be stated as follows:

1. To find out the social emotional components of digital culture in the novel.
2. To describe the effects of digital culture that found in the novel.

D. Significance of Research

The significances of the study as follows:

1. This research provides beneficial information for everyone who wants to do the next research relating to this topic as well as provide any references to those who wants to analyze or discuss novel.
2. The study is expected to give additional knowledge for people who are interested in learning sociology on literature.

E. Scope of Research

This research, essentially, contains two main analyses. The first is the social emotional components of digital culture in the novel. The second is the effects of digital culture based on the novel. Relating to the research questions above, the scope of this research is limited in form of digital culture in the novel because the novel explained many things about the research questions. In connecting with the thesis, the writer focuses on sociological of literary approach and digital culture theory.

CHAPTER II

LITERARY REVIEW

A. Previous Findings

The writer found there were some previous findings which related and relevant with this research, as follows;

Deuze (2006) in his article, "Participation, Remediation, Bricolage: Considering Principal Components of a Digital Culture". He found that digital culture can be seen as an emerging set of values, practices and expectations regarding the way people (should) act and interact within the contemporary network society. Digital culture has emergent properties with roots both in online and offline phenomena, with links to trends and developments pre-dating the World Wide Web, yet having an immediate impact and particularly changing the ways in which we use and give meaning to living in an increasingly interconnected, always on(line) environment. He aimed to identify the principal components of an emerging global digital culture by using Castells' theory.

Burton (2012) in his article, "Literature and Digital Culture". He found that studying literature in the twenty first century can't be separated from our digital world. It insights on how classic works of literature help us to better understand our networked world, and how the digital age changes and enhances how we read, write about, and research literature. How literary works are helping us to make sense of digital culture. He aimed to identify the power of literary works that help people understand digital world by using Trend's theory.

The similarity to this thesis with the previous findings above is talking about digital culture. While the difference is this research focused on the object of study. Deuze focused on identifying the principal components of an emerging global digital culture. Burton focused on identifying the power of literary works that help people understand digital world, while the writer focuses on the digital culture in the Dan Brown's "Digital Fortress" by using sociology of literature approach.

B. Culture

1. Definition

Culture refers to the cumulative deposit of knowledge, experience, beliefs, values, attitudes, meanings, hierarchies, religion, notions of time, roles, spatial relations, concepts of the universe, and material objects and possessions acquired by a group of people in the course of generations through individual and group striving (Hofstede, 1997: 43).

According to Hofstede's definitions above, he aimed to define culture as the collective programming of the mind which distinguishes the members of one group from another, which is passed from generation to generation, it is changing all the time because each generation adds something of its own before passing it on. It is usual that one's culture is taken for granted and assumed to be correct because it is the only one, or at least the first, to be learned. culture is a set of shared and enduring meaning, values, and beliefs that characterize national, ethnic, or other groups and orient their behaviour.

Culture is the deeper level of basic assumptions and beliefs that are shared by members of an organization, that operate unconsciously and define in a basic 'taken for granted' fashion an organization's view of its self and its environment (Schein, 1994: 15).

Culture has many definitions, and it affects everything people do in their society because of their ideas, values, attitudes, and normative or expected patterns of behaviour. Culture is not genetically inherited, and cannot exist on its own, but is always shared by members of a society (Hall, 1976: 16).

According to the quotes above the writer conclude that culture is way of life which was developed by a community to fulfill the basic needs for survival, offspring and organize social experience. The writer also define that culture is all of thing that transmitted socially in society including digital technology.

2. Aspects of culture

Aspects of human expression include both material culture and ephemeral elements (Hicks, 2010: 78). These include:

- a. Language and dialect
- b. Religion
- c. Technology
- d. Cuisine
- e. Aesthetics - art, music, literature, fashion, and architecture
- f. Values, ideology
- g. Social conventions, including norms, taboos, and etiquette
- h. Gender roles
- i. Recreational activities such as festivals and holidays
- j. Commercial practices
- k. Social structure

According to the aspects above, the chosen aspect for this thesis is about aspect of technology. Hicks (2010: 78) explain that mutual communication (whether through technology or transportation of people or goods) is an essential activity which maintains the coherence of a cultural group. This explains why cultural boundaries can follow divisions in language and geography, why globalization has created larger cultural spheres, and highlights the role of mass media in defining and maintaining culture. Education and tradition communicate culture through time.

C. Digital Culture

In this research, the writer used digital culture as the theory and the writer focuses on components and effects of digital culture.

1. Definition

Digital culture is the sense of rapid change. Everything is of course always changing all the time. Change appears to be a given of existence, whether it is manifested in the universal tendency towards entropy, or in the glacially slow drift of evolutionary change. The only thing that never changes is that everything always changes. Mostly this process of change is slow enough to be imperceptible, other than in retrospect, or by implication (Gere, 2008: 7).

Digital culture is an innovative cross-disciplinary program that critically investigates the social and cultural impacts of new digital media technologies (Trend, 2001: 56).

Digital culture is a new complex notion: today digital trends are increasingly interloping with the world of culture and arts, involving different aspects of convergence of cultures, media and information technologies, and influencing new forms of communication (Uzelac and Biserka, 2008: 4).

Digital culture is constantly changing, and those changes have global implications. It's crucial to study the impact that digital media have on our lives (Williams, 2005: 7).

The internet has become something used by the majority of the population in advanced economies, that population has brought with it all of the habits, inclinations and prejudices which are endemic to society as a whole. As a result, much of this early optimism that the internet would radically change our culture in some sort of knowledge revolution has begun to fade in light of the realisation that our culture has perhaps transformed the internet more than vice versa (Miller, 2011: 1).

Williams' statements about television were a result of research on how television affected British and American cultures. His statements signify how television was seen to “change” the world. He states that digital technologies are more than just “technologies”

because the power of television altered all previous forms of media and changed social relationships. Miller finds similarities with the Internet from the statements that Williams' listed about television. Miller states that we seem to be rotating in a circle, as in we have seen all of this before, how television affected our cultural life is very similar to how the Internet is affecting our lives. Miller ends this section by saying that "the Internet, the Web, and mobile digital technologies are more than just 'technologies'," because he feels that they are social relations that include technology (Miller, 2011: 57)

The 'Digital Culture' is a recent term describing the effects of the rapid drop in cost and rapid expansion of power of digital devices such as computers and telecommunications. With the arrival of the digital media, the world was arguably altered and the way that we think of ourselves and the planet (indeed the universe) has conceivably changed forever. In particular, digital culture is associated with the speeding up of societal change, causing a number of technological and social transformations in a surprisingly short amount of time. As Charlie Gere has put it:

"The possibilities of convergence and integration that digital technology offers has lead to it to dominant technical developments in media and communications. Computers are the essential means by which the vast amounts of data that large techno-scientific projects require are managed and manipulated. The concurrent development of science, media and capital under the aegis of digital technology produces a kind of fast-forward effect in which everything appears to take place at an accelerated rate and to produce a dramatic change in a very short time" (Gere, 2008: 10).

Increased and improved communication across the globe – through satellite technology, digital television, improved telephone links and the Internet – certainly means that we are now in touch with people and events internationally with a frequency, speed, quality and affordability never imaginable in the analogue age. This has seemingly resulted in an increasing 'globalization'; that is, the combination of economic, technological, socio-cultural and political forces by which the people of the world are gradually becoming interconnected. Although components of globalization are nothing new, the deployment of

business and capital across borders have continued at an unprecedented pace since the arrival of New Media (Creeber and Martin, 2009: 5).

During the last twenty years, digital technology has begun to touch on almost every aspect of our lives. Nowadays most forms of mass media, television, recorded music and film are produced and even distributed digitally; and these media are beginning to converge with digital forms, such as the internet, the World Wide Web, and video games, to produce a seamless digital mediascape. At work we are surrounded by technology, whether in offices or in supermarkets and factories, where almost every aspect of planning, design, marketing, production and distribution is monitored or controlled digitally. The writer aims that nowadays almost society's activities are affected by technology digital.

2. Components of digital culture

According to Gere (2008: 97) these are the components of digital culture:

a. Cognitive

- 1) **Critical thinking in finding, assessing, and creates a cycle in handling digital information.**
- 2) **Able to evaluate and select software programs to learn or use in a particular task.**
- 3) **Have knowledge of ethical issues, moral, and legal-related online commerce and reuse information from digital sources (such as copyright and plagiarism).**

b. Social-emotional

- 1) **The protection of personal security and privacy.**

As heterogeneous information systems with differing privacy rules are interconnected and information is shared, policy appliances will be required to reconcile, enforce and monitor an increasing amount of privacy policy rules

(and laws). There are two categories of technology to address privacy protection in commercial IT systems: communication and enforcement.

2) **Recognizing the threat and how to face it.**

Many aspects of the threat—from communication between groups to recruitment of new members—have been changing, largely due to ever-developing Internet technology and new possibilities in cyberspace. That is why domestic law enforcement must adopt a culture of awareness conducive to maximizing its potential in recognizing the nascent signs of the threat and domestic radicalization.

3) **Ability to use the internet responsibly to communicate, socialize and learn.**

Access to technology has been one of the highest priorities in public education. But access to technology is not enough today. Technology has become an integral component of our world and is transforming how people think, communicate, and manage their everyday lives. In order to prepare people for the new “Digital Age” they must learn how to use technology to its fullest potential.

3. Features of digital culture

The digital world has many new features, which will be examined below. It is important to note that none of these features are determined by technology since all of them are a result of changes in culture. However, we can see a two-way process here: changes in culture induce technological changes, which then also have an effect on culture (Rab, 2007; 14-18).

a. Interactivity

The digital environment creates the opportunity to increase interactions. In a digital environment it feels natural that an image or a piece of music is modified or entirely changed. There is a trend for our online environment to become more personalised with

modules which we are interested in appearing on our homepages and the same information (e.g. a news item) reaching us in different forms (we can read it online, it can come in a newsletter, we can receive it in an SMS or read it via an RSS channel), depending on our choice.

b. Interconnectivity

The electronic devices of the information society give us the feeling of constantly being connected. We can reach on our mobile phones at any time; when we are sitting in front of our computers working online, searching for some information or perhaps enjoying some form of entertainment. We can contact our friends who are online either by speaking (Skype, etc.) or writing (email) to them, whichever we prefer. Moreover, because of the convergence of devices and technologies, mobile phones, computers and the Internet are beginning to merge into one unit, a means of providing a permanent interactive connection. The possibility of permanent availability and connection change many traditional cultural patterns ranging from how we use our personal space to how we do our work.

c. Complexity

Complexity is present at every system level: complex systems can have complex impacts. Devices we use every day are capable of carrying out complex processes at the touch of a button; the speech of a highranking politician might make an impact in a stock market at the other end of the world within minutes.

d. The merging of oral and written communication.

Written records form an integral part of most cultures and are generally one of the basic means of preserving and disseminating information. It can be seen that in a digital environment written communication has some characteristics of oral communication as distinct from those of written records, as we understand them in a classic sense.

e. Speed

All new technology is designed to enhance speed. The first important trend was to increase the speed of changing locations, while today the main aim is to increase the speed of information exchange. This acceleration can be felt in our everyday lives, too: letters no longer take weeks or days to reach their destination but only a few minutes

f. Unpredictability

We live in a world full of uncertainties. In the early stages of computer development we were certain that this device would always be confined to laboratories. Before the Internet spread worldwide we thought that this channel of communication would never become widely popular. Now, only a few decades later, these devices and the opportunities they offer have a profound impact on our lives.

g. Multitasking

In practice, multitasking means that we can do many things simultaneously. It is highly characteristic of media consumption, for example. The trend of secondary media consumption could be seen after the appearance of traditional electronic devices – this mostly meant background listening to the radio - but more recently television is also often used in this way.

4. Effects of Digital Culture

According to Gere (2008: 145), these are the effects of digital culture:

The state of society in the globalization era, tend not to be separated with existing information technology. With the information and communication technology, allows people in relationships globally. Because the technology is advanced enough at this time, it allows the public to enter into the international world with ease with the supporting features of communication. Therefore there will obviously the effect of it, as follows:

a. Positive

1) It brings the world closer.

Humanity is becoming more integrated day by day. People who are at opposite ends of the planet can talk with each other easily. Its useful in business, education and friendship.

2) Makes acquiring knowledge much easier.

The Internet is a huge information base. It can be used an effective tool for acquiring knowledge. All a web user needs to do is to key in queries to search engines. Users are presented with thousands of search results.

3) Allows people to stay in touch with friends and family that live far away.

Information technology can bring people to stay in touch with friend or family that live far away by the use of email, social networking sites, chat rooms, etc. There are infinite opportunities to blog and read the opinions of others. Even it may not bring people physically closer together.

4) It keeps everyone connected to social and worldly things.

Information can be accessed, stored and distributed at anytime, anywhere with fast and direct, regularly updated in the form of images, voice, and data over a variety of network.

5) Ease in the social and society aspects.

Interaction in the form of communication and cooperation can be performed in any hemisphere. Technology makes everything ease to be connected include social and society aspects.

b. Negative

1) Deviation in using digital media

Nowadays, many people take the advantage of developments in technology to do bad things such as theft, robbery, fraud, and support for terrorist act.

2) It consumes people's live

Digital media often considered as a mirror of event in society and the world, implying a faithful reflection.

3) Changing of mindset.

Technological advances change the public mindset in dealing with life. Digital media user often lost in his own world and does not care about the environment.

4) Patterns of interaction and social activity between people are change.

The presence of technology, especially computers in most households from the upper till middle class have changed the patterns of family and community interaction. Computers that have been connected to the internet and a variety of other devices have opened up opportunities for anyone to get in touch with the outside world.

5) Pressure and competition are increased.

Information technology systems can be used to apply and implement the chosen strategy and also can be used as a competitive tool for win the competition that more increased in this globalization era.

Based on explanation above, Gere explain two types of effects of digital culture, positive and negative effects. The writer only focused on negative effects.

D. Sociology of literature

According to Althusser in (Faruk, 2012: 72), sociology of literature is the knowledge about the nature and development of the society or the literary works of the critics and historians are mainly expressed by the authors who influenced society status where it originated, political and social ideology, early slow start condition and its target audience.

Sociological of literary approach is clearly the relationship between literature and society, literature is an exspression of society, that literature is an expression of a feeling of

community. It means people have to reflect and express the life (Wellek and Warren, 1990: 110).

The literary work will cover three things, namely the social context of the author, literature as a mirror of society, and social function of literature. Social context is the author concerning the social position and its relation to the reading public, including the social factors that could affect the authors themselves as individuals in addition to influencing the content of literary works (Watt, 2001: 110).

A literary work can be assessed from various aspects both from the literary work itself or intrinsic and outside of the literary work or extrinsic and also affect the genetic aspects of the literary is the origins of literary work, in this case the origin of the author's literary works and historical reality behind the born of a literary work (Teeuw, 1984: 53). This is in line with the opinions expressed by Goldmann in (Faruk, 2003: 31), that there is a strong correlation or relationship between the form of literary novels with daily relationship between human beings to commodities in general, or more broadly between human and the others in society.

Emmanuel (1996: 27) states that "in the sociology of literature, the authors explain that the novel describes the social conditions prevailing in the community by writing a novel in which are social critics, so that the reader will be affected by these critics, and to understand little by little the message implicit in the novel". The novel not only as a means of entertainment but also can become a tool of communication indirectly between the author and reader.

Literature was not born in culture vacuum situation and also literary work is fiction work that imaginative, the author tried to utilize the social conditions surrounding as the

object of literary work. The presence of literature there are certain missions of an author as a member of the society who are sensitive to situational touches (Teeuw, 1984: 94).

The approach used to literary work basically there are two approaches, namely intrinsic and extrinsic approach. The elements are in the adaptation of the contents of literary works, such as theme, plot, style and characterizations. Whereas extrinsic elements form of external influences that contained sociology, politics, philosophy, anthropology and others. This science is supporting the development of literary works.

E. Synopsis

Digital Fortress is a techno-thriller novel written by one of the most exalted author of America, Dan Brown. The book scrutinizes the world of encrypting & decrypting of data. NSA (National Security Agency) of US is the organization responsible for the security of network crimes & does it with the help of invincible code-breaking machine (TRANSLTR), but the quandary rises when the TRANSLTR encounters a complex and mysterious code (Digital Fortress) it cannot break. Commander Strathmore(head of NSA) calls Susan Fletcher(head cryptographer) to crack it. She ascertain that it is an unbreakable code or a self looping code which is written by Ensei Tankado, a fired employee of NSA who is displeased with the agency's encroachment into people's privacy. He demands that the US government admits publicly to having the TRANSLTR. If not, he will release the code that TRANSLTR can't break, thus making the code breaking machine useless.

Fletcher's fiancée, professor David Becker, is sent to Spain to collect Ensei Tankado's belongings. Tankado has died from a heart attack, and Becker has to find the pass-key to unlock the code before someone else does. Susan eventually discovers that the code is a viral program which is made for breaking the firewall & eating the data-bank of NSA . Meanwhile, David is trying his level best to find the ring on which the pass-key is printed defending himself from the attacks which are being made on him. When TRANSLTR overheats,Strathmore commits suicide by standing next to the machine. Finally Becker procures the ring and gives it to Susan after returning to US, who decrypts the code and saves the data-bank of NSA (Brown, 2008).

CHAPTER III

METHODOLOGY OF THE RESEARCH

A. Research Method

The method used in this research is descriptive qualitative method. Descriptive qualitative method is procedure that is used to describe data in the form of words written or spoken of the people or actors in the novel that can be observed (Glass & Hopkins, 1984:160). This method intends to describe everything that related to digital culture in Digital Fortress novel by Dan Brown.

B. Source of Data

The source of data in this thesis is the novel of Digital Fortress by Dan Brown. The novel published in 1998 but the novel occurs several times revised in 2003, 2008, 2013 and for her research the writer observed the novel in 2008 version. The novel has 128 chapters with 655 pages. The other references of this research are taking from the articles, books, journals from library and internet that connected to the title.

C. Instrument of the Research

In this research, the instrument that used by the writer is note taking. Ray (2005; 13) defines note taking is a method in assembling data required by using note cards to write down the data findings from source of data. In order to find the data easily, on the note cards are also completed by number and page where the data found. As guidelines in taking the note, the writer refers to the components and the effects of digital culture in Dan Brown's "Digital Fortress".

D. Procedures of Data Collection

In collecting data, the writer applied several procedures as follows:

1. Reading the Digital Fortress novel.
2. The writer identified all the sentences and utterances in the novel that included as social emotional components and the effects of digital culture by underlying them in the novel.
3. The writer taken 7 cards with different colour. They are green and blue cards for the types of social emotional components of digital culture and white, red, yellow, brown, and orange cards for the five points of negative effects of digital culture.
4. The writer written down the sentences and utterances in the cards including its page and chapter based on types of social emotional components of digital culture and negative effects of digital culture by using the 7 cards with different colors.
5. After all the data have been written down on the cards, the writer arranged the cards based on colors of the card.

E. Technique of Analyzing Data

In analyzing data, the writer used the theory of digital culture by Charlie Gere (2008) and also uses sociology of literature approach. The writer used this theory to analyze the components and the effects of digital culture Digital Fortress novel by Dan Brown.

CHAPTER IV

FINDINGS AND DISCUSSIONS

This chapter consists of findings and discussions that show the result of the research. The writer would like to show what have been found from Dan Brown's Novel "Digital Fortress".

A. Findings

In this research, the writer presents the findings based on social emotional components and negative effects of digital culture in Dan Brown's Novel "Digital Fortress". Firstly, the writer will describe the features of digital culture that connected in the novel as evidence of this research. Interactivity, all the staff and cryptographer in the NSA and society are interacts in different form activities. Interconnectivity, the NSA is the security agency that always need connected to the world activities and means of providing a permanent interactive connection to how they do their work. Complexity is present at every system level; TRANSLTR is the evidence of complexity, from none become sophisticated. Speed, the main aim is to increase the speed of information exchange; the way why TRANSLTR was created. Unpredictability, before the internet spread worldwide people thought that this channel of communication would never widely popular; but in fact when the TRANSLTR was created, someone makes Digital Fortress as protector. Multitasking, this mostly meant background tapping to the internet-but more recently TRANSLTR is often used in the NSA. Through data analysis, it was found that there were two types of components of digital culture, that in each part has three subdivision, and for this research the writer only focused on components of social-emotional specially the protection of personal security and privacy and recognize the threat and how to face it. And also it was found that there were two types of effects of digital culture, positive and negative effects and for this research the writer only focused on negative effects. All the types of social

emotional components and negative effects of digital culture proposed by Gere (2008) were found in the novel. Based on that, the writer found that:

1. Social-emotional components

Technology has certainly changed the way we live. It has impacted different facets of life and redefined living. Undoubtedly, technology plays an important role in every sphere of life. Several mundane manual tasks can be automated. Also, many complex and critical processes can be carried out with ease and greater efficiency with the help of modern technology. This has seemingly resulted in an increasing globalization; that is the combination of economic, political, and social-emotional forces by which the people of the world are gradually becoming interconnected.

a. The protection of personal security and privacy.

When technology is more increasingly sophisticated, the users of digital media have become more assertive in demanding that their personal information be protected and that they be given greater control over the collection and use of such information. The writer found that there were some sentences and utterances in the novel that contained about the component of digital culture; the protection of personal security and privacy, as follow:

- 1) TRANSLTR was to include programming that called for passwords held in escrow by the Federal Reserve and the Justice Department in order to decipher a file. **This would prevent the NSA from listening indiscriminately to the personal communications of law-abiding citizens around the globe** (C6: 62/ D1).
- 2) **Ensei Tankado was outraged. This meant the NSA would, in effect, be able to open everyone's mail and reseal it without their knowing. It was like having a bug in every phone in the world.** Strathmore attempted to make Tankado see TRANSLTR as a law-enforcement device, but it was no use; **Tankado was adamant that it constituted a gross violation of human rights.**(C6: 63/ D2).
- 3) The oddest thing of all was that Tankado seemed to understand; it was all part of the intelligence game. He appeared to harbor no anger, only resolve. As security escorted him away, Tankado spoke his final words to Strathmore with a chilling calm.
"We all have a right to keep secrets," he'd said. "Someday I'll see to it we can." (C6: 64/ D3).
- 4) **"He called to tell me he was perfecting an algorithm that wrote unbreakable codes. I didn't believe him."**
"But why would he tell you about it?" Susan demanded. "Did he want you to buy it?" "No. It was blackmail."

Things suddenly began falling into place for Susan. “Of course,” she said, amazed. “He wanted you to clear his name.”

“No,” Strathmore frowned. **“Tankado wanted TRANSLTR.”**
(C7: 68/ D4)

- 5) **“Yeah. After I uncovered the Skipjack algorithm, he wrote me—said we were brothers in the global fight for digital privacy.”** Susan could barely contain her disbelief. Hale knows Tankado personally! She did her best to look uninterested. Hale went on. **“He congratulated me for proving that Skipjack had a back door—called it a coup for privacy rights of civilians all over the world. You gotta admit, Susan, the backdoor in Skipjack was an underhanded play. Reading the world’s E-mail? If you ask me, Strathmore deserved to get caught.”** (C31: 207/ D5)
- 6) Hale nodded thoughtfully. **“Quis custodiet ipsos custodes?”** Susan looked puzzled. “It’s Latin,” Hale said. “From Satires of Juvenal. It means ‘Who will guard the guards?’” **“I don’t get it,” Susan said. “Who will guard the guards?”** **“Yeah. If we’re the guards of society, then who will watch us and make sure that we’re not dangerous?”** Susan nodded, unsure how to respond. Hale smiled. “It’s how Tankado signed all his letters to me. It was his favorite saying.” (C31: 210/ D6)
- 7) “You think we’re ready for that responsibility? You think anyone is? It’s fucking shortsighted! You say our government has the people’s best interests at heart? **Great! But what happens when some future government doesn’t have our best interests at heart! This technology is forever!**” (C85: 454/ D7)
- 8) Hale struggled to get free. He looked Susan in the eye and kept yelling. **“How the hell do civilians defend themselves against a police state when the guy at the top has access to all their lines of communication? How do they plan a revolt?”** (C85: 455/ D8)
- 9) Susan felt a chill. Unable to abort? But why? She feared she already knew the answer. So this is Tankado’s revenge? Destroying TRANSLTR! For years Ensei Tankado had wanted the world to know about TRANSLTR, but no one had believed him. **So he’d decided to destroy the great beast himself. He’d fought to the death for what he believed—the individual’s right to privacy.** (C86: 464/ D9)
- 10) Susan had read a lot about viruses like this—deadly programs that included a built-in cure, a secret key that could be used to deactivate them. **Tankado never planned to destroy the NSA databank—he just wanted us go public with TRANSLTR! Then he would give us the pass-key, so we could stop the virus!** (C86: 466-467/ D10)
- 11) Still, Susan couldn’t believe that Tankado would have allowed this to happen. He was a pacifist. He didn’t want to wreak destruction; all he wanted was to set the record straight. **This was about TRANSLTR. This was about everyone’s right to keep a secret. This was about letting the world know that the NSA was listening.** Deleting the NSA’s databank was an act of aggression Susan could not imagine Ensei Tankado committing. (C86: 468/ D11)

b. Recognizing the threat and how to face it.

Besides the protection of personal security, the writer also found some sentences and utterances that contained about the component of digital culture; recognize the threat and how to face it, as follow:

- 1) **TRANSLTR, like all great technological advancements, had been a child of necessity.** During the 1980s, the NSA witnessed a revolution in telecommunications that would change the world of intelligence reconnaissance forever—public access to the Internet. More specifically, the arrival of E-mail. (C4: 39/ D12)
- 2) In reality, intercepting E-mail as it zipped across the Internet was child's play for the NSA's techno-gurus. The Internet was not the new home computer revelation that most believed. It had been created by the Department of Defense three decades earlier—an enormous network of computers designed to provide secure government communication in the event of nuclear war. **The eyes and ears of the NSA were old Internet pros. People conducting illegal business via E-mail quickly learned their secrets were not as private as they'd thought. The FBI, DEA, IRS, and other U.S. law enforcement agencies—aided by the NSA's staff of wily hackers—enjoyed a tidal wave of arrests and convictions.** (C4: 40/ D13)
- 3) Caught in a virtual intelligence blackout, the NSA passed a top-secret directive that was endorsed by the President of the United States. **Buoyed by federal funds and a carte blanche to do whatever was necessary to solve the problem, the NSA set out to build the impossible: the world's first universal code-breaking machine.** Despite the opinion of many engineers that the newly proposed code-breaking computer was impossible to build, **the NSA lived by its motto: Everything is possible. The impossible just takes longer.** (C4: 42/ D14)
- 4) **"Susan, the existence of Digital Fortress has major implications for the future of this organization. I have no intention of informing the President behind the director's back. We have a crisis, and I'm handling it." He eyed her thoughtfully. "I am the deputy director of operations."** A weary smile crept across his face. "And besides, I'm not alone. I've got Susan Fletcher on my team." (C11: 100/ D15)
- 5) **Reluctantly, the NSA's Crypto team, led by Commander Strathmore, created an algorithm they christened Skipjack. Skipjack was presented to Congress for their approval.** Mathematicians from all over the world tested Skipjack and were unanimously impressed. They reported that it was a strong, untainted algorithm and would make a superb encryption standard. (C23: 165/ D16)
- 6) Strathmore faced the Skipjack scandal head-on. He defended his actions vehemently to Congress. **He argued that the public's craving for privacy would come back to haunt them. He insisted the public needed someone to watch over them; the public needed the NSA to break codes in order to keep the peace. Groups like the EFF felt differently. And they'd been fighting him ever since.** (C23:166/ D17)

c. Ability to use the internet responsibly to communicate, socialize and learn.

The writer did not identify about this part. Because, nothing utterances or sentences that describe in the novel about this part.

2. The negative effects of digital culture

a. Deviation in using digital media.

Digital culture in social life is how someone can make interaction with another people by use digital media. The negative effect of digital media is the deviation in use it. In this research, the writer found some sentences and utterances that contained about it, as following:

1) E-mail

Criminals, terrorists, and spies had grown tired of having their phones tapped and immediately embraced this new means of global communication. E-mail had the security of conventional mail and the speed of the telephone. Since the transfers traveled through underground fiber-optic lines and were never transmitted into the airwaves, they were entirely intercept-proof—at least that was the perception. (C4: 39/ D18)

2) The Monocle Computer

On the street, the man in wire-rim glasses reached to a tiny device attached to his belt. **The rectangular pack was about the size of a credit card. It was a prototype of the new Monocle computer.** Developed by the U.S. Navy to help technicians record battery voltages in cramped quarters on submarines, the miniature computer packed a cellular modem and the newest advances in micro technology. **Its visual monitor was a transparent liquid crystal display, mounted in the left lens of a pair of eye glasses. The Monocle reflected a whole new age in personal computing; the user could now look through his data and still interact with the world around him.** (C25: 174/ D19)

The only catch was that Hulohot was deaf; telephone communication was impossible. **Recently Strathmore had arranged for Hulohot to receive the NSA's newest toy, the Monocle computer.** Strathmore bought himself a SkyPager and programmed it to the same frequency. From that moment on, his communication with Hulohot was not only instantaneous but also entirely untraceable. (C96: 517/ D20)

3) The Internet

"That's not the point!" Susan said, suddenly coming to life. This was her specialty. **"The point is that this is a code. Tankado left us a clue! He's taunting us, daring us to figure out the pass-key in time. He's laying hints just out of our reach!"** (C120: 617/ D21)

Prowling hackers were now appearing from all over the world. The number was doubling almost every minute. **Before long, anyone with a computer—foreign spies, radicals, terrorists—would have access to all of the U.S. government's classified information.** (C124: 627/ D22)

b. It consumes people life

The next negative effect of digital culture that found in the novel is it consumes people life and in this research the writer found some sentences about it, as following:

- 1) Susan told David about COMINT, the agency's global reconnaissance division—a mind-boggling collection of listening posts, satellites, spies, and wiretaps around the globe. **Thousands of communiqués and conversations were intercepted every day, and they were all sent to the NSA's analysts for decryption.** The FBI, CIA, and U.S. foreign policy advisors all depended on the NSA's intelligence to make their decisions. (C3: 31/ D23)
- 2) **A user could now send E-mail in confidence. Even if the transmission was intercepted, only those who were given the key could ever decipher it.** (C4: 40/ D24)
- 3) Intelligence gathering had never been easier. **Codes intercepted by the NSA entered TRANSLTR as totally illegible ciphers and were spit out minutes later as perfectly readable clear text. No more secrets.** (C4: 44/ D25)
- 4) Fontaine decided, out of respect for Strathmore, to do the job himself. **He had an invisible tap installed on Commander Strathmore's Crypto account—his E-mail, his interoffice correspondence, his brainstorm, all of it. If Strathmore was going to crack, the director would see warning signs in his work.** (C74: 399/ D26)

a. Changing of mindset

This time we are living in very powerful currents of change. Advances in technology-information technology-mainly, people are now undergoing changes in all aspects of life. The other negative effect of digital culture is change of mindset that the writer also found some sentences and utterances in her research, as following:

- 1) "So what are you saying?"
Jabba sighed. **"I'm saying Strathmore's a psycho like the rest of them. But I'm also saying he loves TRANSLTR more than his own goddamn wife.** If there were a problem, he would have called me." (C51: 303/ D27)
- 2) **Susan had to admit, ever since hearing about Digital Fortress, she'd felt a certain academic curiosity to know how Tankado had managed to write it. Its mere existence contradicted the most fundamental rules of cryptography.** Susan eyed the commander. "You'll delete the algorithm immediately after we see it?" (C62: 343/ D28)
- 3) He'd also heard report that Strathmore was working absurd hours and seemed about to crack under the pressure. Despite differences of opinion with Strathmore on many issues, **Fontaine had always held his deputy director in the highest esteem; Strathmore was a brilliant man, maybe the best the NSA had. At the same time, ever since the Skipjack fiasco, Strathmore had been under tremendous stress.** It made Fontaine uneasy; the commander held a lot of keys around the NSA—and Fontaine had an agency to protect. (C74: 399/ D29)
- 4) **His dreams for Digital Fortress had failed. He could accept that. Susan was all that mattered now. For the first time in decades, he truly understood that there was more to life than country and honor.** I sacrificed the best years of my life for country and honor. But what about love? He had deprived himself for far too long. And for what? To watch some young professor steal away his dreams? Strathmore had nurtured Susan. He was

protected her. He had earned her. And now, at last, he would have her. Susan would seek shelter in his arms when there was now here else to turn. She would come to him helpless, wounded by loss, and in time, he would show her that love heals all. **Honor. Country. Love. David Becker was about to die for all three.** (C102: 541/ D30)

a. Patterns of interaction and social activity between people are change

Digital culture influence is felt in the current era of globalization. Various changes in many social activities are briefly described the evidence. In this research, the writer found some sentences and utterances that included about it, as following:

- 1) Striding toward them was an enormous black man. **Susan had never seen him before. As he approached, he fixed her with a penetrating stare. “Who’s this?” he demanded. “Susan Fletcher,” Brinkerhoff replied. The enormous man arched his eyebrows. Even sooty and soaked, Susan Fletcher was more striking than he had imagined. “And the commander?” he demanded.** Brinkerhoff shook his head. The man said nothing. He stared off a moment. Then he turned back to Susan. **“Leland Fontaine,” he said, offering her his hand. “Glad you’re okay.” Susan stared. She’d always known she’d meet the director someday, but this was not the introduction she’d envisioned.** (C108: 563-564/ D31)
- 2) Jabba nodded. **“Yeah. A pass-key that stops the worm. Simply put, if we admit we have TRANSLTR, Tankado gives us a kill-code. We type it in and save the databank. Welcome to digital extortion.”** (C109: 569/ D32)
- 3) Jabba knew the director was right. There were over three thousand ISDN connections tying into the NSA databank from all over the world. **Every day military commanders accessed up-to-the-instant satellite photos of enemy movement. Lockheed engineers downloaded compartmentalized blueprints of new weaponry. Field operatives accessed mission updates.** The NSA databank was the backbone of thousands of U.S. government operations. Shutting it down without warning would cause life-and-death intelligence blackouts all over the globe. (C110: 573/ D33)
- 4) The men appeared to be inside a van of some sort. Electronic cabling hung all around them. The audio connection crackled to life. Suddenly there was background noise. **“Inbound audio,” a technician called from behind them. “Five seconds till two-way.”** (C112: 584/ D34)
- 5) **“Absolutely not!”** The man with the buzz cut yelled into the camera. **“We have orders! We report to Director Leland Fontaine and Leland Fontaine only!”** Fontaine looked mildly amused. **“You don’t know who I am, do you?”** (C113: 585/ D35)

b. Pressure and competition are increased

Competition and pressure on various aspects of life as a consequence of globalization and the impact of the increased knowledge is direct impact of information and

communication technology. In this research, the writer found some sentences and utterances that contained about it, as following:

- 1) Everyone in cryptography knew about the NSA; it was home to the best cryptographic minds on the planet. **Each spring, as the private-sector firms descended on the brightest new minds in the workforce and offered obscene salaries and stock options, the NSA watched carefully, selected their targets, and then simply stepped in and doubled the best standing offer. What the NSA wanted, the NSA bought.** Trembling with anticipation, Susan flew to Washington's Dulles International Airport where she was met by an NSA driver, who whisked her off to Fort Meade. (C3: 29/ D36)
- 2) **Its three million processors would all work in parallel—counting upward at blinding speed, trying every new permutation as they went. The hope was that even codes with unthinkably colossal pass-keys would not be safe from TRANSLTR's tenacity.** This multibillion-dollar masterpiece would use the power of parallel processing as well as some highly classified advances in clear text assessment to guess pass-keys and break codes. (C4: 42-43/ D37)
- 3) Strathmore shrugged. "Either way, it's too late now. He's posted a complimentary copy of Digital Fortress at his Internet site. Everyone in the world can download it."
Susan went white. "He what!"
"It's a publicity stunt. Nothing to worry about. The copy he posted is encrypted. People can download it, but nobody can open it. It's ingenious, really. The source code for Digital Fortress has been encrypted, locked shut." (C7: 69/ D38)
- 4) Susan's mind was racing—*Ensei Tankado wrote a program that creates unbreakable codes!* She could barely grasp the thought.
"Digital Fortress," Strathmore said. **"That's what he's calling it. It's the ultimate counterintelligence weapon. If this program hits the market, every third grader with a modem will be able to send codes the NSA can't break. Our intelligence will be shot."** (C7: 65/ D39)
- 5) If the pass-keys were as good as promised, they would unlock the most sought-after product of the computer age—a totally invulnerable digital encryption algorithm. **Numataka could embed the algorithm in tamper-proof, spray-sealed VSLI chips and mass market them to world computer manufacturers, governments, industries, and perhaps, even the darker markets . . . the black market of world terrorists.** (C18:132/ D40)

1. Discussion

In this part, the writer analyzed the data that have been found in Dan Brown's novel "Digital Fortress". The writer was as a reader of novel, identified social-emotional components and negative effects of digital culture based on Gere's theory.

Based on explanation above, the writer classified three types of social-emotional components of digital culture and five types of negative effects of digital culture, as following:

1. Social-emotional components

a. The protection of personal security and privacy

It can be seen the protection of personal security and privacy in **Datum 1**. Because of the TRANSLTR is the world's first universal code-breaking machine, Tankado as the cryptographer in the NSA hope that when the TRANSLTR project is successful, it would be used to decipher E-mail only in cases preapproved by the Justice Department. Datum above describes how important to prevent the NSA from listening indiscriminately to the personal communications of law-abiding citizens around the globe. In recent culture, the Justice Department plays an important role in protect the personal privacy in digital media. It also shows that with the arrival of the digital media, the world was arguably altered and the way that we think of ourselves and the universe has conceivably changed forever. It means that, the privacy have to get protection.

Next, **Datum 2** demonstrates that be able to open everyone's mail and reseal it without their knowing was like having a bug in every phone in the world and means that it constituted a gross violation of human rights. Many aspects of life now show how better life with digital technology, but almost people do not know that the government agencies having a bug in every phone in the world for some importance. Extracting the communications is really violation. That's why in **Datum 3** Tankado said that everyone has a right to keep secrets. However, rapid technological changes, the rapid growth of the Internet and the development of more sophisticated methods of collecting, analyzing, and using personal information have made privacy a major socio-emotional issue in this research. This datum illustrates how important the protection of personal security and privacy has to be.

In **Datum 4** describes that Tankado finally wrote a program that creates unbreakable codes, namely Digital Fortress. The program was created for TRANSLTR and because of the program, the TRANSLTR cannot be activated. Tankado warn Strathmore and blackmail him to go public and tell the world that the NSA has TRANSLTR. Tankado said if the NSA

admitted that the NSA can read public E-mail, he would destroy Digital Fortress. This datum shows that the protection of personal security and privacy is really important for Tankado.

Based on **Datum 5**. Greg Hale is one of NSA's Cryptographers. He is a young programmer from Bell Laboratories. In Skipjack Congress announcement, Greg Hale, shocked the world by announcing he'd found a back door hidden in the algorithm. Tankado congratulated Hale for proving that Skipjack had a back door—called it a coup for privacy rights of civilians all over the world. In this data, Tankado also said to Hale that they were brothers in the global fight for digital privacy. Hale believed that the backdoor in Skipjack was an underhanded play and reading the world's E-mail is deserved to get caught.

The writer explained that the utterances contained in **Datum 6**. Quote from Satires of Juvenal, *Quis custodiet ipsos custodies?* It means 'Who will guard the guards?'. In this data, Tankado thought, if the NSA are the guards of society, then who will watch the NSA and make sure that the NSA are not dangerous? Tankado thought that even the NSA has an access to guard the society, no one can make it sure that the NSA are not dangerous.

The data show that the sentences and utterances contained in **Datum 7** and **Datum 8**. In this data, Starthmore as the commander of the NSA want to rewrite digital fortress. Hale thought that rewrite digital fortress is sick and the NSA did not ready for the responsibility. He also thought what happens when some future government does not have best interests at heart. Hale also thought that how do civilians defend themselves against a police state when the guy at the top has access to all their lines of communication? How do they plan a revolt when the guy guards them? Hale just tried to convince that everyone have to get their protection of their personal privacy.

In **Datum 9** describes that for years Ensei Tankado had wanted the world to know about TRANSLTR, but no one had believed him. So he'd decided to destroy the great beast himself. He'd fought to the death for what he believed—the individual's right to privacy. So Tankado revenge to destroy TRANSLTR by created Digital Fortress.

The data that contained in **Datum 10** and **Datum 11** shows that Tankado created digital fortress for forcing the NSA to tell the world about TRANSLTR. It was blackmail after all. Actually, Tankado never planned to destroy the NSA databank because digital fortress is deadly programs that included a built-in cure, a secret key that could be used to deactivate the virus. Digital fortress has a pass-key and it was an antidote. The pass-key can stopped the virus. In this data, Tankado only wanted was to set the record straight. He thought that, it was about TRANSLTR. It was about everyone's right to keep a secret. It was about letting the world know that the NSA was listening and it was about that everyone need the protection of personal security and privacy.

b. Recognizing the threat and how to face it

The writer explained the sentences and utterances of recognize of the threat that contained in the novel, as following:

Based on the findings, the writer can explain the sentences that contained in **Datum 12** and **Datum 13**. When the computer users of the world found out the U.S. government had open access to their E-mail communications, a cry of outrage went up. The programmers began working on a way to keep E-mail more secure. They quickly found one and public-key encryption was born. Public-key encryption was a concept as simple as it was brilliant. It consisted of easy-to-use, home computer software that scrambled personal E-mail messages in such a way that they were totally unreadable. The NSA felt the crunch immediately. The codes they were facing were no longer simple substitution ciphers crackable with pencil and graph paper—they were computer-generated hash functions that

employed chaos theory and multiple symbolic alphabets to scramble messages into seemingly hopeless randomness. That is why the NSA created TRANSLTR—the single most expensive piece of computing equipment in the world—and witnessed a revolution in telecommunications that would change the world of intelligence reconnaissance forever.

The data shows in **Datum 14** that When the NSA Caught in a virtual intelligence blackout. The NSA passed a top-secret directive that was endorsed by the President of the United States. Five years, half a million man-hours, and \$1.9 billion later, the NSA proved it once again. The world's first universal code-breaking machine had been born. In this data, the NSA believed that; Everything is possible. The impossible just takes longer.

From **Datum 15** shows The NSA was the only U.S. intelligence organization that enjoyed total immunity from federal accountability of any sort. When the existence of Digital Fortress has major implications for the future of the NSA, Trevor Strathmore as a commander of the NSA do not want informing the threat to the Director. Beside it, Senior NSA officials had the right to handle verifiable intelligence emergencies without executive knowledge. So, Strathmore believed that he can handle the threat because as a Commander of the NSA he had to be a guiding light in a world of impossible decisions.

The writer explained that the sentences contained in **Datum 16** and **Datum 17**. In an effort to create a single, public-key encryption standard, Congress charged the nation's best mathematicians, those at the NSA, to write a new super algorithm. The plan was for Congress to pass legislation that made the new algorithm the nation's standard, thus alleviating the incompatibilities now suffered by corporations that used different algorithms. The NSA's Crypto team, led by Commander Strathmore, finally created an algorithm namely Skipjack. But three days before congress was to vote their certain approval of Skipjack, a young programmer from Bell Laboratories, Greg Hale, shocked the world by announcing he'd found a back door hidden in the algorithm. It had come as little surprise

when the NSA hired Greg Hale two days later. In this data, Strathmore felt it was better to have him on the inside working for the NSA than on the outside working against it. Strathmore faced the Skipjack scandal head-on. He defended his actions vehemently to Congress. He argued that the public's craving for privacy would come back to haunt them. He insisted the public needed someone to watch over them; the public needed the NSA to break codes in order to keep the peace.

2. The negative effects of digital culture

a. Deviation in use digital media.

The writer explained the sentences and utterances of the protection of personal security and privacy that contained in the novel, as following:

1) E-mail

Based on the findings, the writer can explain the sentences that contained in **Datum 18**. In this data explained that Criminals, terrorists, and spies tried to mishandle digital media. They embraced E-mail, the new means of global communication for transfer their black data. They use E-mail because E-mail had the security of conventional mail and the speed of the telephone. So nobody can intercept them.

2) The Monocle Computer

The data describes in **Datum 19** and **Datum 20** that the monocle computer before is Navy to help technicians record battery voltages in cramped quarters on submarines, the miniature computer packed a cellular modem and the newest advances in microtechnology. But, someone make it more sophisticated and A user entered information via tiny contacts fixed to his fingertips; touching the contacts together in sequence mimicked a short hand similar to court stenography. In this data explained the man that used the monocle computer namely Hulohot who had been working for the NSA for years was mishandle the monocle computer for plan a crime.

3) The Internet

In **Datum 21** illustrates that because of digital media is becoming more sophisticated, there more deviation in use it. Tankado created digital fortress with a pass-key that nobody knows the code. In this data, Tankado left the NSA a clue, he is taunting the NSA, daring the NSA to figure out the pass-key in time. He is laying hints just out of the NSA reach.

In accordance with the findings, the writer can explain the utterances that contained in **Datum 22**. The evidence that the deviation in use digital media is everyone greedy in knows information. In this data explained that when the pass-key of digital fortress is unbreakable, prowling hackers were appearing from all over the world. Before long, anyone with a computer—foreign spies, radicals, terrorists—would have access to all of the U.S. government's classified information. The data also shows that the internet makes everyone interest to mishandle the internet.

b. It consumes people life

The writer explained the sentences and utterances of it consumes people life that contained in the novel, as following:

In **Datum 23** explains the evidence that the effect of digital culture is it consumes people life. In this globalization era, the digital media is becoming more sophisticated. It makes many people make interaction in digital media without knowing that they are intercepted every day. The data given the evidence that COMINT, the agency's global reconnaissance division—a mind-boggling collection of listening posts, satellites, spies, and wiretaps around the globe. Thousands of communication and conversations were intercepted every day, and they were all sent to the NSA's analysts for decryption. The FBI, CIA, and U.S. foreign policy advisors all depended on the NSA's intelligence to make their decisions.

From **Datum 24** and **Datum 25** describe that TRANSLTR is the world's first universal code-breaking machine. When the TRANSLTR had been born in the NSA the secrets poured in. Drug lords, terrorists, and embezzlers alike were intercepted without their

knowing. In this data explained that the codes intercepted by the NSA entered TRANSLTR as totally illegible ciphers and were spit out minutes later as perfectly readable clear text. Intelligence gathering had never been easier. No more secrets.

Based on **Datum 26** shows that in this digital era, all the things are easy to create. Leland Fontaine as a Director of the NSA had an invisible tap installed on Commander Strathmore's Crypto account—his E-mail, his interoffice correspondence, his brainstorm, all of it. If Strathmore was going to crack, the director would see warning signs in his work. The data was the evidence that no secrets anymore because digital media can be intercepted and it consumes people life.

c. Changing of mindset

The writer explained the sentences and utterances of change of mindset that found in the novel, as following:

The data show that the utterances contained in **Datum 27**. One of the effect of digital culture in this life is it can change our mindset. In this data, show that Strathmore as a commander of the NSA suffering from mental illness. He loves TRANSLTR more than his wife. He is basically elf-centered. He thought that every damn file is the one that could save the world.

From **Datum 28** and **Datum 29** can be seen that when the NSA faces the big problem, Leland Fontaine had concluded that Strathmore was sick. He is working at 110percent—as sly, smart, and patriotic as ever. Strathmore had devised plan. A plan Fontaine had no intention of interrupting. The data show, Strathmore arrange his plan to get digital fortress' pass-key. He will handle the Sys-Sec lab, Run-Monitor stats, mutation activity stats, the works. He asks Susan to handle Node 3. Delete all of Hale's E-mail. Any records of correspondence with Tankado, anything that mentions Digital Fortress. The plan is for repair his name and for crack to open the file and have to look at Tankado's program. The

data explained that unlocking the Digital Fortress algorithm was not wise, regard less of how interesting it would be. But, Strathmore still want to open it.

The writer explained that the sentences contained in **Datum 30**. the data show that TRANSLTR changed Strathmore's mind. He sacrificed the best years of his life for country and honor. He also has been killed David Becker because his selfishness in love Susan. The data also show that Strathmore sacrificed his country, honor and love to get back TRANSLTR.

d. Patterns of interaction and social activities between people are change.

The writer explained the sentences and utterances of the patterns of interaction and social activities between people are change that found in the novel, as following

In **Datum 31**, the data explained that when Susan arrived in one place. Striding toward them was an enormous black man and it was Leland Fontaine. Susan had never seen him before. As he approached, he fixed her with a penetrating stare. He demanded about the name of the woman in front of him and Susan also introduce herself to the Director Leland Fontaine. In this data show that digital media was change the patterns of interaction and social activities between Leland Fontaine and Susan Fletcher that work in NSA but never met by face to face before.

From **Datum 32** illustrates that Tankado has been announced on the internet about digital fortress and sell the pass-key on it. Jabba said that when the NSA admitted that it has TRANSLTR, Tankado gives the NSA a kill-code. The NSA can type it in and save the databank. This called the digital extortion. The data gave the evidence that now we can buy anything by using digital media. this data also proven that our pattern of interaction changed by digital extortion.

Based on the findings, the writer can explain the sentences that contained in **Datum 33**. Another evidence that social activities and pattern of interaction are change is the data found in the novel explained that there were over three thousand ISDN connections tying

into the NSA databank from all over the world. Every day military commanders accessed up-to-the-instant satellite photos of enemy movement. Lockheed engineers downloaded compartmentalized blueprints of new weaponry. Field operatives accessed mission updates. The NSA databank was the backbone of thousands of U.S. government operations.

It seen in **Datum 34** and **Datum 35**, the data show that there were men appeared to be inside a van of some sort. Electronic cabling hung all around them. The audio connection crackled to life. Suddenly there was background noise. This data found that another evidence our interaction are change is because we can interact with another people by using audio connection. We do not need to meet them by face to face again even we life far away. But, the effect is we do not each other.

e. Pressure and competition are increased

The writer explained the sentences and utterances of change of mindset that found in the novel, as following:

Based on the findings, the writer can explain the utterances that contained in **Datum 36**. Founded by President Truman at 12:01 a.m. on November 4, 1952, the NSA had been the most clandestine intelligence agency in the world for almost fifty years. It was home to the best cryptographic minds on the planet. The NSA watched carefully, selected their targets, and then simply stepped in and doubled the best standing offer. What the NSA wanted, the NSA bought. The data explained that NSA willing to get highest salary because the NSA thought that the world is field of competition.

In **Datum 37** proves that TRANSLTR is the world's first universal code-breaking machine. This multibillion-dollar masterpiece would use the power of parallel processing as well as some highly classified advances in clear text assessment to guess pass-keys and break codes. It would derive its power not only from its staggering number of processors but also from new advances in quantum computing—an emerging technology that allowed information to be stored as quantum-mechanical states rather than solely as binary data. In

this data, the writer explained that TRANSLTR is created for the pressure and competition in breaking universal code that found in digital media interaction.

In **Datum 38** and **Datum 39** explains that Ensei Tankado wrote a program that creates unbreakable codes that called Digital Fortress. It is the ultimate counterintelligence weapon. If this program hits the market, every third grader with a modem will be able to send codes the NSA cannot break. The NSA intelligence will be shot. Actually, the copy he posted is encrypted. People can download it, but nobody can open it. It's ingenious, really. The source code for Digital Fortress has been encrypted, locked shut. Everybody can have a copy, but nobody can open it. The data explained that between the NSA and Ensei Tankado is they were in a pressure and Tankado created digital fortress for win the competition in defend the right privacy.

The last finding in **Datum 40** shows Digital Fortress is an unbreakable code. Ensei Tankado as the creator of the program promotes the pass-key in internet and sells it. The pass-keys is as good as promised, they would unlock the most sought-after product of the computer age—a totally invulnerable digital encryption algorithm. Everyone could embed the algorithm in tamper-proof, spray-sealed VSLI chips and mass market them to world computer manufacturers, governments, industries, and perhaps, even the darker markets. The black market of world terrorists. The data explained that the increased of pressure and competition is make the negative effect in digital culture.

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

This chapter delivers conclusion and suggestion. After finding the social emotional components and the negative effect of digital culture by using Gere's theory which is found in "Digital Fortress" novel by Dan Brown, the writer provides some conclusions and suggestions to the readers.

A. Conclusions

These are the conclusions from the result of the research, as follow:

In Dan Brown's "Digital Fortress" novel, the writer found some of social emotional component and negative effect of digital culture which implicitly tried to be delivered by the author in storyline. There are two of social emotional components and five negative effects of digital culture that are occurred in the novel, they are:

1. Social emotional component

- a. The protection of personal security and privacy is the person's right to assertive in demanding that personal information must be protected and given greater control over the collection and use of such information. From the novel, the author showed a lot of sentences and utterances which indicate that everyone has a right to keep secrets. Means that, it is important to protect the personal security and privacy.
- b. Recognizing the threat and how to face it is awareness in maximizing potential in recognizing the nascent signs of the threat and digital radicalization and using the quickness in facing it. From the research, the writer found that there are many threats that come to NSA but they always have a great idea in facing it.

2. The negative effects

- a. Deviation in using digital media is mishandling the digital media. From the research, the writer found that the more sophisticated digital is the more chance for people to mishandle it.
- b. It consumes people live
People are now undergoing changes in all aspects of life. Some parts of the novel showed that the digital media makes everyday lives are becoming consumption.
- c. Changing of mindset is when the time makes the mindset be changed. Some parts of the novel showed that the ambition of making the digital technology being more sophisticated makes the mindset of a commander of the NSA Trevor Strathmore be changed.
- d. Patterns of interaction and social activity between people are change. The presence of digital technology described in the novel that almost interaction between people in the NSA is using digital media and exactly it makes the activities change. In the novel showed that the cryptographer of the NSA and the Director of the NSA do not know each other when they meet in one room even they work in same place.
- e. Pressure and competition are increased. Competition and pressure on various aspects of life as a consequence of globalization and the impact of the increased knowledge is direct impact of information and communication technology. Some parts of the novel described that competition and pressure in digital technology are very increased and it makes people caught in a virtual intelligence blackout.

Overall, Dan Brown in “Digital Fortress” wants to make the readers realize how the digital culture products have contaminated our life and implicitly have formed ourselves and perspective in looking at the world around us.

B. Suggestions

In the field of literary research, many related theories are available. They vary as literature is interdisciplinary. For example, literature is heavily related to sociology that talks

about culture. Through “Digital Culture”, the writer suggests that potential researches under sociology of literature approach are highly possible.

For the next researchers, the writer suggests them to learn more about digital culture in order to do more specific research about the digital culture.

For the readers, the writer suggests them to find and to know more about the digital culture because it has been a part of our life; moreover it has shaped our lifestyle and life's perspective in the society.

CURRICULUM VITAE

The writer, **Dian Maulidah**, was born on October 28th 1991 in Pinrang. She is the second child of Luthfi Dahri, S.Pd and Ratnawati, S.Pd. and she has two sisters and one brother. In 1997, she started her education in SDN 1 Pinrang. After finishing elementary school, she attended junior high school at MTs. PPM Rahmatul Asri Enrekang finished in 2003.

She continued her study in MAN Pinrang and then graduated in 2009. Directly after graduating high school, she was accepted as a student at English and Literature Department of Adab and Humanities Faculty of UIN Alauddin Makassar.

During her study at University, she spent her little time to join in some organization; KisSA (Komunitas Seni Adab), HMI (Himpunan Mahasiswa Islam) Komisariat Adab Cabang Gowa Raya, BEM (Badan Eksekutif Mahasiswa) Of Adab and Humanities Faculty and also in KMP (Kerukunan Mahasiswa Pinrang) koperti UIN Alauddin Makassar. She ever became the head of KOHATI (Korps HmI-Wati) Komisariat Adab Cabang Gowa Raya in period 2012-2013.
