## Abstract

Covid-19 is an infectious disease that has the potential to cause a public health emergency. Therefore, preventive measures against these types of infectious diseases must be carried out as soon as possible. Indonesia as a rule of law, therefore the prevention of these types of infectious diseases must be established in a rule or regulation. The purpose of this literature review is to describe an intervention regarding the use of masks and handsanitizers against the incidence of Covid 19. The database searches used include ProQuest, SciVerse Science Direct, Scopus, Pubmed, Cochrane library, Springer and Sci-hub. Keywords used in the search for articles were mask, hand sanitizer, preventive, COVID-19. There are 18 journal articles obtained through objective analysis, topic suitability, research method used, sample size, research ethics, the results of each article, and the limitations that occur. There have been effective results in implementing the distribution of covid 19 events related to the use of masks and hand sanitizers. There have been effective results in using masks and hand sanitizers against the incidence of covid-19

**Keywords:** Covid 19, masks, hand sanitizer.

## Introduction

The Indonesian government has declared a disaster emergency status related to this virus pandemic. The government made a policy to implement physical distancing to decide the spread of covid 19. People are advised not to make direct contact with other people, avoid mass gatherings. Work, study and worship activities are carried out at home<sup>1</sup>. Current information indicates that the two main modes of transmission of the COVID-19 virus are respiratory droplets and contact. Respiratory sprays are generated when a person coughs

or sneezes. Anyone who is in close contact (within a radius of 1 m) with a person who shows symptoms of respiratory distress (coughing, sneezing) is at risk of exposure to respiratory tract splashes that could possibly cause infection (infectious). Splashes can also fall onto surfaces on which the virus remains active; therefore, the immediate environment of an infected person can be a source of transmission (contact transmission).<sup>2,3</sup>

The mechanism that occurs is by capturing particles or aerosols from the air with a filtering or absorption method, so that the air that passes through the mask is clean from particulates<sup>4</sup>. Prevention of transmission of Covid19 to the community is carried out with various efforts. Based on the health protocol issued by the WHO, the government instructs the public to always wash their hands with soap in running water, and always wear a mask when outside the home. Why wear a mask? A recent study by the Standing Commission for Infectious Diseases and 21st Century Threats in the United States

said that COVID19 can be transmitted through normal conversation and breathing with an exposed person. Based on the research, the Ministry of Health (2020: 2) explained that this disease can be spread through small droplets from the nose or mouth when coughing or sneezing. The droplet then falls on the surrounding object.

Masks are necessary for everyone so that they do not spread the virus to each other because this virus is transmitted between humans and humans and spreads very quickly. A high chance of transmission can occur when exposed people interact with healthy people and healthy people interact with other people and so on. Seeing the current tense situation, namely the Covid-19 pandemic that has occurred throughout the world, it is necessary to make efforts to prevent the spread of the corona virus. Thus the Community Service team felt the need to carry out activities to break the distribution chain of Covid-19 by distributing free masks and hand sanitizers to the Manggarai community in the Puni Ruteng market, Manggarai Regency.

Hand-saitizer is a product in the form of a gel that contains an antiseptic as a hand sanitizer which, if used,

does not need to be rinsed with water.<sup>8</sup> Using it is very effective at killing transient and resident flora compared to using water, using ordinary soap or antiseptic soap. FDA) that hand-sanitizers can kill germs in less than 30 seconds<sup>5</sup>. The purpose of this activity is to make the public aware of the importance of health in this pandemic situation, always wash their hands with soap, use a hand sanitizer and wear a mask to stop transmission of the virus to others.

## Materials and Method

The method used in this review literature uses a comprehensive strategy, such as searching for articles in research journal databases, searching through the internet, reviewing articles. The database searches used included ProQuest, SciVerse ScienceDirect, Scopus, Pubmed, Cohcrane library, Springer and Sci-hub. The keywords used in the search for the article were the study of covid 19, health promotion, use of masks, use of handsanitizers and Covid 19. There were 18 journal articles and were analyzed through objective analysis, topic suitability, research method used, sample size, research ethics, results. of each article, as well as the limitations that occur.

(Chi-Chung, 2020) <sup>6</sup>	The role of community-wide wearing of face mask for control of coronavirus disease 2019 (COVID-19) epidemic due to SARS-CoV-2	100	Epidemiology Analysis	In the first 100 days (31 December 2019 to 8 April 2020), 961 COVID-19 patients were diagnosed. nosed in HKSAR. The incidence of COVID-19 in HKSAR (129.0 per million population) was significantly lower ( $p < 0.001$ ) than Spain (2983.2), Italy (2250.8), Germany (1241.5), France (1151.6), USA (1102.8), UK (831.5), Singapore (259.8), and South Korea (200.5).

Based on the results of articles and journals that were collected and the author’s analysis, it was found that there was a relationship between the use of masks and hand sanitizers to the Covid 19 incident. The behavior of

wearing a mask and handsanitizer when doing activities is an effort in the form of preventing the occurrence of covid transmission 19.

## Discussions

Some efforts are made by the government through the covid-19 control team and health team to reduce the risk of contracting the corona virus, among others; remind the public to maintain health by washing hands after making contact with anyone in flowing water, consuming vitamins that can increase endurance, quarantining people suspected of being infected with the corona virus, wearing masks when they are outside the home and in places -public places, maintain distance, and do not make direct contact with other people.

This is consistent with research conducted by WHO on influenza, influenza-like illness (influenza-like illness), and coronavirus in humans providing evidence that the use of medical masks can prevent the spread of splashes that can cause infection from an infected person to another. and possible environmental contamination from these splashes. Evidence that the use of medical masks by healthy people inside the home or by people who have contact with patients, or by people in large gatherings serves as a preventive function is limited.

Research by (Moudy & Adlia, 2020) states that the correct use of masks is known by almost all respondents, namely masks are worn with a position to completely cover the nose, mouth and chin (96.6%), and throw away the masks that have been used (79,7 %). More than half of the respondents know that if the mask is wet or dirty, it must be replaced immediately (75.1%) and wash their hands after removing the mask (59.4%). Only a small proportion of respondents chose the wrong option, namely touching the front surface of the mask while wearing it and taking it off (14.1%), and using one disposable mask repeatedly (13.5%).

Research by Rivai, Ayini S, Yesintha states that Hand sanitizer is a product that can clean hands that contain an antiseptic in the form of a gel which when used to wash hands no longer need to rinse with water. Alcohol-based products, which include almost all "disinfectant" products, contains a high percentage alcohol solution (usually 60-80% ethanol) and kills viruses in a similar way. But soap is better because it requires only a small amount of soapy water, which, by rubbing, covers the entire hand easily.<sup>22-28</sup>

## Conclusion

The relationship between the use of masks and hand sanitizers to the incidence of Covid 19. Covid-19 is an infectious disease that has the potential to cause a public health emergency. Therefore, preventive measures against these types of infectious diseases must be carried out as soon as possible. Indonesia as a rule of law, therefore the prevention of these types of infectious diseases must be established in a rule or regulation. Prevention of transmission of Covid-19 in the community is carried out with various efforts. Based on the health protocol issued by the WHO, the government instructs the public to always wash their hands with soap in running water, and always wear a mask when outside the home. In addition, the use of handsanitizers that contain antiseptics as hand sanitizers, which if you do not need to be rinsed with water, are very effective in killing transient and resident flora compared to using water, using ordinary soap or antiseptic soap
