## ACKNOWLEDGEMENT

بِسْمِ ٱللَّهِ ٱلرَّحْمَٰنِ ٱلرَّحِيمِ

*Alhamdulillah Rabbil Alamin*, the researcher would like to express her deepest gratitude to the almighty Allah swt, the only provider, the most merciful who gives her guidance, inspiration, and good healthy for all time to conduct the writing of this thesis. Also, shalawat and salam are always delivered to our/the great Prophet Muhammad saw who has brought us from the darkness to the lightness.

During the writing of the thesis, the researcher received much assistance from a lot of people, for their valuable guidance, correction, suggestion, advice and golden supports. Without them, the writing of this thesis would never been possibly completed. Therefore, the researcher would like to express the greatest thanks and appreciation for those people, they are:

1. The researcher's beloved parents, **Muh. Basri S** and **Murni Rauf** who always motivate, educate, support, and pray for the researcher's success.
2. **Prof. Hamdan Juhannis, M.A., Ph.D**, the Rector of Alauddin State Islamic University of Makassar.
3. **Prof. Dr. Mardan, M.Ag.,** the Vice Rector of Institution Academic Developing.
4. **Dr. H. Wahyuddin, M.Hum.,** the Vice Rector of General Administration and Financial Planning.
5. **Prof. Dr. Darussalam, M.Ag.,** the Vice Rector of Student Affairs.

This research aims at finding out the the effectiveness of using Animation movies in improving the students'speaking skills. This research was conducted at SMPN 2 Sungguminasa. The instrument that the researcher used in this research to collect data were speaking test and questionnaire. In this research the population were 150 students in the fifth classes. The sample were 40 students. There were 20 students in Class VIII.1 as experimental class and 20 students in VIII.2 as controlled class.The research findings showed that the second grade students of SMPN 2 Sungguminasa got score on pre-test with the mean score 50.8 which classified as fair. After giving treatment the students got improvement, the students got score with the mean score 67,05. The result of the data analysis indicated that there was a significant improvement in the students' speaking skills after being taught using Animation Movies.

# CHAPTER 1

# INTRODUCTION

This chapter discusses the research background that leads to research problem, research objectives, research scope and definition of operational variables.

## *A. Background*

Speaking is one of the most important skills we use to communicate and understand others in every activity which is one of the productive skills is this one. Speaking has an important role in sharing and receiving information. Furthermore, speaking is the most important aspect of communication because it is an interactive process that involves the production, reception, and processing of information. It is also explained from the holy Quran in Ibrahim verse 4 as follows:

وَمَآ اَرْسَلْنَا مِنْ رَّسُوْلٍ اِلَّا بِلِسَانِ قَوْمِهٖ لِيُبَيِّنَ لَهُمْ ۗفَيُضِلُّ اللّٰهُ مَنْ يَّشَآءُ وَيَهْدِيْ مَنْ يَّشَآءُ ۗوَهُوَ الْعَزِيْزُ الْحَكِيْمُ

We send not an apostle except (to teach) in the language of his (own) people, to make (things) clear to them. Now Allah leaves straying those whom He pleases and guides whom He pleases: and He is Exalted in power, full of Wisdom. (Ibrahim: 4).

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

From the Quran verse above, it can be seen that language was used as a tool given to people by God to communicate with others. People can not interact with other people without using a language.

According to Hanapiah and Suwandi (2010), there are two factors of causes that contribute to low levels of student speaking ability that is external and interna factors. External factors, like as the usage of Indonesian influence in the family environment and society, many students still speak the mother tongue of infected one another in regular interactions, while Internal factors, students who lack curiosity as well as students learn to talk with proper pronunciation, intonation, and spelling, but lack the confidence to express themselves publicly.

English movie as teaching media in the EFL classroom is a good way to teach the students how to speak well by imitating the actors and actresses in the movie, and also students can learn the way to pronounce the words by watching the movie. Herron and Hanley (in Kabooha 2016) conclude that using movies in the EFL classroom offers background information that activates prior knowledge, which is essential in stimulating the four skills activities in the classroom. Khan in (Parmawati and Inayah 2019) believes that the "visuality" of movies can facilitate comprehension and understanding for the language learners in an ideal visual context, which makes it an effective language-teaching tool. She further argues that movies offer a variety of methods and resources for teaching the target language, helping students to improve their speaking skills. According to Canning and Wilson (in Rasyid 2016) cartoon movies can stimulate and motivate students' interest. They could attract students'

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

attention since they provide two styles of learning which are audio and visual. This media could help the students interpret the message spoken by watching a visual performance of the speakers and listening to the speaker's voices. Therefore, the students can adjust the spoken language to the picture that is animated. It will make them easy to catch and remember the spoken language.

Most people speak more than write in daily life, on the other hand, so many teachers of English ignore speaking and listening skills, the teachers spend the majority of class time on reading and writing skills in the learning process. Consequently, most of the students feel that speaking skill is difficult things to communicate because they do not have the experience to apply them.

Furthermore, based on the situation of the teaching-learning process is conducted at the second-grade students at SMPN 2 Sungguminasa that the researcher gets from the English teacher. The teacher said that the English learning process is integrated, and there is no particular skill that stands out, so in speaking skills, the students can not be able to speak independently in the class on outside. Because some problems make students low in speaking, lack of vocabulary, pronunciation and also less confidence are factors that students do not speak English well. The media is also a problem in this situation, the lack of method and skill in teaching speaking. When a teacher teaches speaking, just give explanations and exercises without including engaging media. It results in a lack of a new environment that encourages the student to learn English. One way to solve the problem and improve understanding in English

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

classes is for the researcher to use an animation movie as a medium of teaching to encourage students to be more active in speaking.

Related to the description above, the researcher proposes to assume that the movie is an influential and beneficial teaching strategy that can be used to provide opportunities for the student to develop their speaking skills as a flexible method and can be well worth it if the control time is set properly and regularly not only in the classroom but also outside of the classroom. The effect of not carrying out the research is that the teacher may find it difficult to develop students' speaking skills because they only use strategies or methods that do not help students in developing their speaking creativity and the solution is this research will be used. To help teachers in developing students' speaking skills through the movie, for through movies students can improve their vocabulary and pronunciation.

Therefore, the researcher focused on developing students' speaking skills in the EFL classroom through animation movies at SMPN 2 Sungguminasa. The researcher interested in finding out whether using animation movies as teaching media to develop students' speaking skills could be realized in the second-grade students' in junior high school.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

### *B. Research Problems*

Based on the background above, the formulas of the research problems are:

1. How is students' ability in speaking skills by using animation movies as teaching media of the second grades students at SMPN 2 Sungguminasa?

2. How is students' ability speaking skills without using animation movies as teaching media of the second grades students at SMPN 2 Sungguminasa?
3. Is there any significant difference between using animation movies as teaching media or not in student ability speaking skills of the second grades students at SMPN 2 Sungguminasa?

## *C. Research Objectives*

Based on the research problems above, so the researcher formulates the aims which are:

1. To find out the improvement of students' speaking ability by using animation movies as teaching media of the second grades students at SMPN 2 Sungguminasa.
2. To find out the effect of students' speaking ability without using animation movies as teaching media of the second grades students at SMPN 2 Sungguminasa.
3. To find out the significant difference between the effect of using animation movies as teaching media or not in developing the speaking skills of the second grades students at SMPN 2 Sungguminasa.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

## *D. Research Significance*

**1.** Theoretical Significance

The researcher truly expects that the readers would get a lot of new knowledge related to this research, and this research will give significant contribution especially in developing speaking skills in EFL Classroom through animation movies for the second grades students.

**2.** Practical Significance

The researcher supposes three practical significances as follows:

a. For Students

The researcher expects that this research would give advantages to the students especially their problem in speaking. So that they can develop their speaking skills through the movies as media.

b. For Teachers

This research hoped to give useful information to the Teacher, and also the teacher can use this strategy in teaching speaking skills in the classroom even just as a basic reference to teach Speaking so that the learning process would be fun and more guided.

c. For next Researcher

The researcher expects that whether research did further research about speaking skills.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

## *E. **Research Scope***

The scopes of the study are limited to the second grades students at SMPN 2 Sungguminasa. This study uses movie as teaching media. The movie has many genres they are drama, action movies, animation movies, horror movies, etc. But this research focused on animation movies.

## ***F. Operational Definition of Terms***

Two variables would be discussed in this research, they are as follows:

**1.** Speaking

Speaking is the most often used skill in classroom activities, It is recognized in an English language context both by the teachers and primarily by students. Therefore, many languages students consider speaking as the measuring of knowing a language.

**2.** Movie

The movie is a kind of media that the researcher believes would make students interested because most teenagers like to watch movies. Some factors that create a positive learning environment are the plot, actors or actresses, and the dialogue as well.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

# CHAPTER II

# LITERATURE REVIEW

This chapter is divided into four main sections they are reviews of related findings, pertinent ideas, theoretical framework and hyphothesis.

## A. Previous Review of Related Research Findings

The researcher reports several studies used of a movie as media in teaching English, some researchers' finding is briefly as follow:

The first previous finding comes from Rasyid (2016). "Using Cartoon Movie to Improve Speaking Skill". The purpose of this study is to see if using an English cartoon movie can help students at SMU Abulytama's second grade obtain better results. The participants in this study were 20 students in IPA 2 Class 2. The researcher used an experimental design with one group pre-test and post-test to collect data. The oral test was utilized as the instrument the qualities of speaking that are covered in Grammar, vocabulary, and pronunciation were the focus of this research. The result shows that the students' overall speaking score improved. The grammatical part was recognized as having the highest/significant increase because some students' grammar scores were quite poor before incorporating the movie in their study, but there was a big improvement in the grammar aspect later on. It went up 19 points from 25 to 44. It explains how an English cartoon movie can be a useful tool for improving students' speaking skills, particularly in terms of grammar.

The second previous finding comes from Ismaili's (2014) "The Effectiveness of Using Movies in the EFL Classroom-A Study Conducted at South European University". The Impact of employing movies in the EFL classroom was examined by the researcher. It demonstrates how it affects the development of students' listening and communication abilities. The experiment was carried out on a sample of two groups: an experimental and a control group who thought traditionally. During the academic year 2011/2012, the study was conducted at the South-East European University. The students in this study were pre-intermediate and intermediate level students, aged 18-25. The study's findings revealed substantial differences in integrated abilities between the experimental and control groups of students while using the movies as a teaching medium. According to the findings, movies capture students' attention and communicate language in a more moral natural manner than textbooks. What is more, movies provide visual context aids that help students' comprehension and learning ability?

The third previous finding comes from Herni's (2015) "The Influence of Using Cartoon Video on The Students' Speaking Ability". The researcher used an experimental procedure with a pre-test-post-test design in a group. The author gathered information by administering a pretest and a post-test. The research sample consists of 27 students from Mts Muhammadiyah Tongko Enrekang's class in the seventh year in the academic year 2014/2015. Cartoon video was used to record the sample.

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

The research found that the students' mean pre-test score in terms of accuracy in speaking abilities was 4.58, the post-test score was 6,66, and the overall score in progress was 2.08. The pupils' fluency in speaking skills is 500, their posttest score is 7.62, and their total score in progress is 2.62. Which t-test value (5.90>2.056) is greater than the t-table value? It is concluded that CartoonVideo develops the students' Speaking Skills. So, Null Hypothesis (H0) was rejected and the Alternative Hypothesis (H1) is accepted.

The similarity of the research is the researcher uses animation movie as teaching media that is applied by the researcher and the difference of the research is the researcher tries to apply animation movie by differences insignificance. So that the researcher focuses on students' pronunciation and students' vocabulary at the second grade of SMPN 2 Sungguminasa by quasi-experimental research.

## B. Pertinent Ideas

### 1. Concept of speaking

#### a. Definition of speaking

Speaking is a skill that, to speak in a foreign language is an important part of the learning process. To deal so far with the concept of oral abilities, when people convey their ideas, brains, and feelings to the other, there are some definitions are given by experts about speaking such as:

Speaking is a productive language skill (Siahaan, 2008:95). It means that speaking is a person's skill to produce sounds that exist at the meaning and be understood by other people, so that able to create good communication.

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

Speaking, according to Brown (2001), is an interactive process of constructing that involves producing and receiving information; its forms and meaning are dependent on the context in which it occurs, which includes the participants themselves, their collective experiences, the physical environment, and the purposes for speaking; it is frequently spontaneous, open-ended, and involving.

From those theories, it can be concluded that speaking skill is related to communication. Speaking is the skill to communicate with others by using appropriate language to express one's thoughts, feelings, and ideas, as well as to give and receive information and knowledge.

**b. Element of speaking**

According to Harmer (1991), there are six categorized in the element of speaking they are:

**1. Vocabulary**

It is impossible to communicate without a good vocabulary. As a result, learning this part is fairly necessary before practising speaking.

Students frequently struggle to remember all of the languages they have learned due to a lack of practice and application. They need to practice more to remember them.

**2. Pronunciation**

It is the method of speaking a coherent utterance (Webster: 1983). We all know that pronouncing is one of the aspects of speech that is closely linked to vowel and consonant sounds, stress, and intonation. It is possible to learn it by imitating and

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

repeating. As a result, English teachers should have a high standard of pronunciation so that students can emulate their teachers during the teaching and learning process.

**3. Grammar**

Perspective grammar, conventional grammar, structural grammar, and grammar as knowledge are some of the types of the grammar defined by Cook (2009). Grammar, according to another definition, is the study of language that deals with the shapes and structure of words (phonology) as well as the conventional patterns in phrases and sentences (syntax).

**4. Fluency**

Fluency relates to how successfully a learner communicates meaning rather than how many grammatical, pronunciation, and vocabulary errors they make. Accuracy and fluency are frequently compared. As a result, fluency is a highly complex relation that relates primarily to the smoothness of discourse continuation.

**5. Comprehensibility**

The ability to understand, know, or convey the speaker's point (message) to others or a partner is referred to as comprehension.

**6. Self-Confidence**

In the process of learning to talk, self-assurance becomes crucial. A student with strong grammatical and vocabulary skills is usually quite confident in expressing an idea, suggestion, or responding to a question.

**c. Functions of Speaking**

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

The function of speaking according to Burns (1997) then developed by Richards explores a three-part version of the function of speaking: talk as Speak as an interaction talk as a transaction and talk as a performance Each of these is unique. Below are some activities to look into:

1. **Talk as Interaction**

This is a term that refers to a chat or a largely social interaction. People exchange greetings, engage in small talk and chit chat, retell recent events, and so on when they meet because they want to be nice and create a comfortable zone of interaction with others.

2. **Talk as Transaction**

Richards (2008:25), refers to situations in which the focus is on what is said or done. The core focus is on the message meaning, which allows one to be understood simply and properly. Transactional speaking can be identified in our social life through dialogues, debates, job interviews, and so on.

3. **Talk as Performance**

Speaking as performance is the third type of talk that can be effectively separated. This is a term that relates to public speaking or speaking in front of an audience, such as morning talks, public announcements, and speeches. Talk as performance generally takes the form of a monologue rather than a dialogue, and it has a distinct formal structure that is closer to written language than conversational language.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

**d. The teaching of speaking**

Harmer (2007: 345-348) states some important points related to the teaching of speaking. They are the reluctance of the students to speak and take part and the teacher's role. He adds some useful ways to minimize the students' reluctance in speaking, including :

1. Preparation

Allowing them enough time to consider how they would speak, or allowing them to rehearse discussions in pairs before doing anything more public.

2. The values of repetition

Allowing them to improve on what they've done previously, allowing them to assess what they've already done, and having them repeat their speech. The pattern described by Harmer (2007: 346) characterizes the speaking process:

Plan → Perform → Analyze → repeat

3. Big groups, small groups.

Make sure that they get chances to speak and interact in big or small groups.

4. Mandatory participation.

Allowing students to participate equally in a task without knowing who takes the first turn and who takes the second. There are also three levels to teaching speaking (Harmer,2007:118). They consist of learning the new language, practising it, and engaging in communication activities.

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

a. Introduction to the new language.

Learning a new language is a continuous process. A teacher should emphasize the language often so that the students get comfortable with it and can produce it automatically. The teacher can establish an environment in which pupils can locate the words they need to speak in a real-life situation.

b. Practice

Practising a new language is a continuous process. A teacher should emphasize the language often so that the students get comfortable with it and can produce it automatically. The teacher can establish an environment in which pupils can locate the words they need to speak in a real-life situation.

c. Communicative activities

communication activities should be the focus of all communicative efforts. The students are usually prepared to study speaking from the material in their textbook. Of course, these dialogue models are limited because students are not allowed to express their thoughts or the task of creating a new situation. As a result, communication actions will take place.

**2. The concept of Movie**

**a. Definition of movie**

A movie is one of the visual aids that can be used in a speaking class. It makes lessons more fun. It can also be used to create a situation for speaking classes more clearly, that the students have big enthusiasm in the teaching-learning process. According to Hornby (in Seftiarini, 2016) state that, movie means a series of moving

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

pictures recorded with a sound that tells a story, shown at cinema/movie. Movie or film is a term that encompassed individual motion pictures, the field of the movie as an art form, and the motion pictures industry. Movies are produced by recording images from the world with cameras, or by creating images using animation techniques or special effects.

**b. Types of Movie**

Bordwell and Thompson (in Arifin, 2013) defined the types of movie or film as follow:

a). Documentary movie

The purpose of a documentary movie is to offer accurate information about the world outside of the film. Documentaries advertise themselves as factually reliable as a genre of film. There are two kinds of documentary films, according to Bardwell and Thompson:

1) Compilation films are made by putting together images from various archives.

2) Direct cinema: filming an ongoing event "as it happens" with minimal filmmaking intervention.

b). Fictional Movie

The characters, places, and events in a fictitious film are all made up. However, just because a film is fictional does not rule out the possibility that it is based on true events. For one thing, a typical fictional film prepares its events; they are devised, planned, rehearsed, filmed, and re-filmed. Agents are portrayed or

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

portrayed through an intermediary in a fictitious film, but they are not photographed directly in a documentary.

c). Animation Movie

Animated movie, to tell a story by using childish images such as talking pigs. Any style of the illustrated image seen in rapid succession to give the impression of movement is referred to as animation. The word “cartoon” is most often used in references on TV programs and short films for children featuring anthropomorphized animals, superheroes, the adventures of child protagonists, and related genres.

**c. The use of movies in teaching English**

Using movies as a medium can be done in a variety of ways. Sequential, Single-Scene, Selective, and Whole-Film Approaches are among the methods proposed by King (2002). Some structurally driven tactics have been widely adopted by classroom teachers when presenting films, she claims. Watching movies isn't only about sitting in front of the television and watching a film from start to finish. Furthermore, viewing movies can be a multi-faceted activity. According to Kalean (2013), teaching English in the EFL classroom by using English movies as media is a good technique to educate students on how to imitate the actors and actresses in the movie. Students can view an English film and then converse in English. Then they can replay the movie to theck whether their pronounciation is correct or not. After watching English movies they are so good in English stress patterns. Besides, they have better understanding in unfamiliar sounds after watching English movie.

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

**d. The advadtages of Movie in teaching English**

Teaching, in general, and English teaching in particular, is a collaborative effort including several different elements aimed at achieving a certain purpose. It suggests that the success of education is decided by the roles played by all of the components involved, rather than by a single component. A teacher must, however, bring all components into the classroom and use them during the teaching and learning process. There are numerous reasons why movies (film) can be employed in language acquisition, according to Harmer (2001: 282-283). The advantages of using movies will be explained as follows:

a). Seeing language-in-use

When students watch a movie, they are not only hearing but also seeing the language. For example, overall meaning and moods are frequently convoluted by expression, gestures, and other visual clues, which considerably improves comprehension. In spoken language, students can copy various expressions and gestures.

b). Cross-cultural awareness

A movie helps the students to go beyond the classroom uniquely. This is particularly handy if they want to witness, for example, normal British "body language" while inviting someone out or how Americans communicate with servers. Movies are also beneficial in allowing pupils to see what kinds of meals individuals in other nations eat and how they dress. They can learn not only about language but also about another country's culture.

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

c). The ability to create

When students construct their movie as a teaching and learning tool, they have the opportunity to create something memorable and engaging, which makes learning more fun for them.

d). Inspiration

For all of the reasons stated thus far, most students' enthusiasm grows when they get the opportunity to see and hear language in action. It can motivate students during the teaching and learning process.

### *C. Theoretical Framework*

In this part, the researcher did something to do with any activities and terms that are committed as treatment within the class during the research. Then, in the process part the researcher uses animation movies as teaching media to develop the amount of material available that was given to answer the research question. In using the conventional method, the researcher focused on applying a strategy that usually the teacher does. Thus, in output part, as the result of the process, it refers to developing students' speaking skills.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

The theoretical framework of this study can be diagrammed as follow:

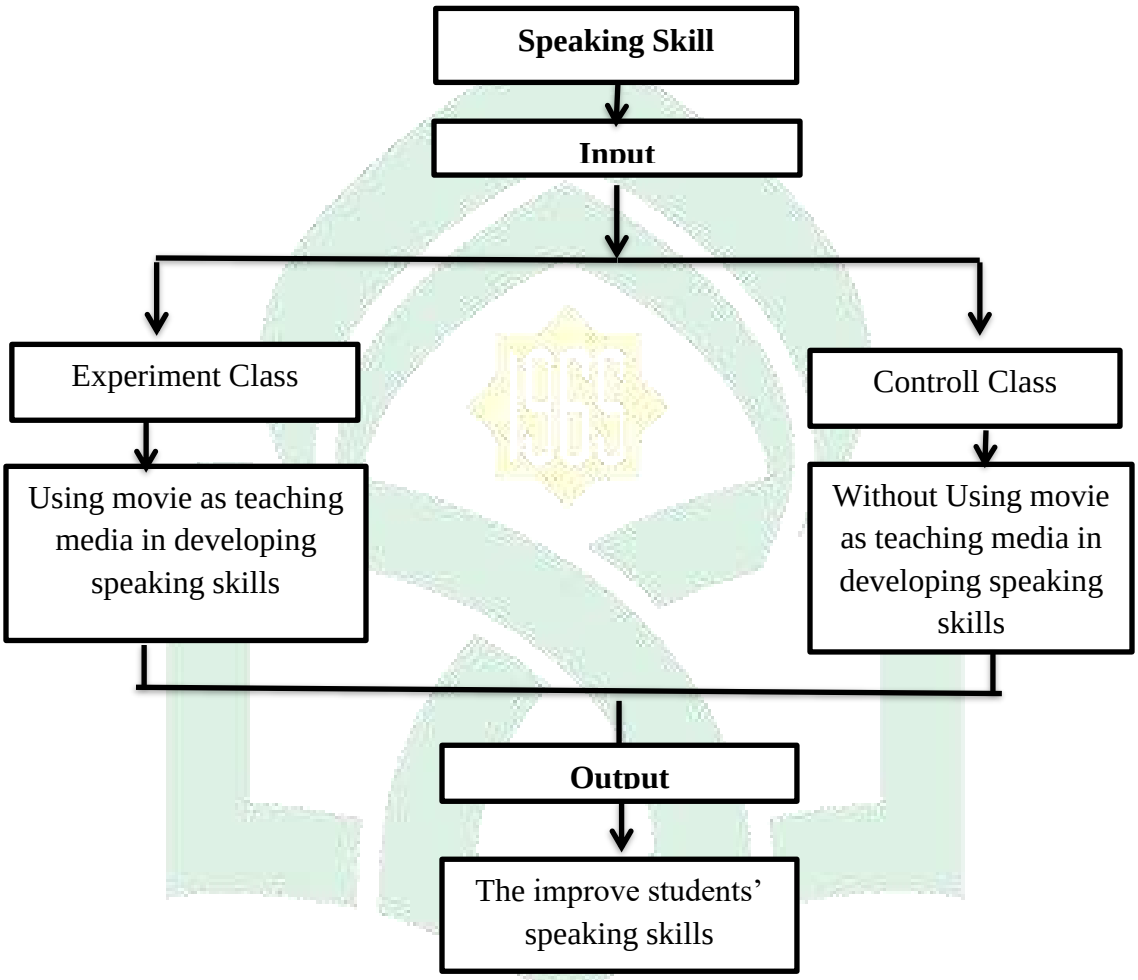

**Figure 1 Conceptual Framework**

### *D. Hypothesis*

According to Sugiyono (2010), a hypothesis is a temporary response to the formulation of the research problem, where the formulation of the research problem has been given in the form of a statement.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

H1: Using a movie as teaching media is effective in developing the second-grade students' speaking skills in the EFL classroom at SMPN 2 Sungguminasa.

H0: Using a movie as teaching media is not effective in developing the second-grade students' speaking skills in the EFL classroom at SMPN 2 Sungguminasa.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

# CHAPTER III

# RESEARCH METHOD

This chapter dealt with research design, research variable, population and sample, research instrument, data collection procedures, data analysis techniques, hypothesis testing.

## *A. Research Design*

This study applied a quantitative method using a quasi-experimental design. According to Venderstoep and Johnston (2009) state that quasi-experimental is a study that takes in real life-setting rather than in a laboratory setting, they are often considered not truly experimental research but rather correlation research, which involved identifying statistics between two variables rather than the casual relationship

The researcher intended to investigate the impact of animation movies in Teaching Students‟ Speaking Skill. To achieve that, the researcher was conduct a pre-and-post test to evaluate the performance of the students before and after the implementation of Animation Movie as teaching media. The samples would be separated into two classes: experimental class and control class. This experiment used pre-test and post-test design. In the experimental class, was conducted pre-test, treatment and post-test while the control class was conducted pre-test and post-test only. The comparison between the pre-test and post-test scores depends on how the researcher conducted the treatment to be successful.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

## *B. Population and Sample*

### 1. Population

The population of this research was the second grades students of SMPN 2 Sungguminasa which consisted of 5 classes. Each class consisted of approximately 30. The total the population were150 students.

### 2. Sample

According to Mcmillan and Schumacher (1984) sample is a group of the subjects selected from the population. In addition, according to Arikunto (2013) sample is most the representative of those who are researched. The researcher selected purposively the students in two classes as a sample and the number of students from each class were 20 students, 20 students as the experimental class of class VIII 1 and 20 students of class VIII 2 as a controlled class. So, the total number of the sample were 40 students.

## *C. Research Variable*

This research focused on the study of the influence of treatments, according to Arikunto explains in her book (2013) that there were two variables, Independent and dependent variables.

1. Independent Variable

Schreiber & Asner-self (2011) defined an independent variable (X) as a variable that is stated to cause some outcome. In this research, the independent variable was the use of animation movies as teaching media.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

2. Dependent Variable

Also, according to Schreiber & Asner-self (2011), the dependent variable (Y) is the outcome of the independent variable; it is the effect. The dependent variable in this research was students' speaking skills.

### *D. Research Instrument*

The instrument that was used in this research that were speaking test and questionnaire.

**1. Speaking Test.**

The researcher used a speaking test to assess and examine the students' speaking skills. The researcher provides a topic related to the material concerned based on the material in their syllabus and the students speak up in front of the class.

**2. Questionnaire**

The researcher gave a questionnaire for students to check their problems in speaking class and what are the benefits of using animation movies that can help students in developing their speaking skills.

The questionnaire was a method of gathering data by submitting forms containing questions to a person or group of people in order to obtain answers or responses as well as information needed by the researcher. The questionnaire was only filled by Experimental class. This research used likert scale with 10 items that reveal the attitudes of respondents. This likert contains statement which could be

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

answerd by repondents. This method was used to collect data on the problem of speaking and the respondent's view of animation movie as teaching media.

Sugiyono (2012) states that Likert Scale used to measure the attitudes, opinions, and perception of a person or group of people about social phenomena, where it is consisting of Strong Agree, Agree, Less Agree, Disagree, and Not Agree. The reason why the researcher only uses four categories and leaves out one is importants, because if that option is available, the respondent will most likely choose it, making the data acquired less valuable.

**Table 1: Scale Likert Measurement Category**

| No | Answer Choices | Score Item | |
|---|---|---|---|
| | | **Favorable** | **Unfavorable** |
| 1. | Strongly Agree | 4 | 1 |
| 2. | Agree | 3 | 2 |
| 3. | Disagree | 2 | 3 |
| 4. | Strongly Disagree | 1 | 4 |

### *E. Data Collection Procedure*

The procedure of collecting data described as follow:

**1. Pre-Test**

Pre-test in the first meeting with ± 90 minutes to know the student's pronounciation and fluency in speaking. The researcher provided a topic related to the material concerned based on the material in their syllabus and the students speak up in front of the class.

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

**2. Treatment**

After giving the pre-test, the researcher applied the treatment for some meetings using the Animation movie to the students and treatment conducted with ± 90 minutes in one meeting. For beginning the class Researcher applied the learning steps in the class like:

a) Greeting when entering the class,
b) Checking students' attendance,
c) The researcher introduces and explain the material, its generic structure, and language features of speaking.
d) The researcher exposes the students to an animation movie. The movie contains the material.
e) The students and the researcher analyzed the video together. Here, the researcher helps students to identify the generic structure and the language features.
f) Than the researcher explains speaking activities that will be done by the students.
g) The students are asked to work in pairs, their task is making dialogue.
h) After students work in pairs, they would perform the dialogue in front of the class.
i) Provide feedback to students and provide reinforcement material.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

a. Experimental Class

The experimental class was the class that would be sampling in testing from the researcher. After the pre-test was conducted, the researcher would apply the animation movie for some meetings. In some meetings, the researcher would teach and apply all of about animation movies. After applying animation movies, the researcher would know the effect of movies in teaching students‟ speaking skills.

b. Control Class

Control class was a class that would be not taught using animation movies as a teaching media.The researcher would be taught them, as usual, using conventional way strategy. The number of meeting in this controlled class would be the same as the experimental class.

**3. Post-test**

After doing treatment, the last step the researcher gave the post-test to students which supply the same test as a pre-test. In analyzing the result, the mean score of pre-test and post-test would find out whether or not Animation movies as teaching media could improve students speaking skills.

UNIVERSITAS ISLAM NEGERI

## *F. Data Analysis Technique*

**1. Scoring Technique**

Scoring and classifying the students ‘ speaking test by the speaking rubric score. The rubric score used as the assessment guide that describes the criteria of the

ALAUDDIN MAKASSAR

score that the researcher needed to assign students‟ results of speaking.Analytic scoring of speaking can be seen in the following figures:

**Table 2 Classification of the Student's Speaking Ability**

| Scale | Classification |
|---|---|
| 80-100 | Excellent |
| 69-79 | Good |
| 58-68 | Fair |
| 46-56 | Poor |
| 35-45 | Very Poor |

**Table 3 Scoring Rubric For Speaking**

**a. Grammar**

| Aspects | Score | Description |
|---|---|---|
| Grammar | 80-100 | Equivalent to that of an educated native speaker. |
| | 69-79 | Capable of using the language correctly on all levels that are generally relevant to professional demands. Grammar mistakes are uncommon. |
| | 58-68 | Grammar is well-controlled. Ability to participate effectively in most formal and casual conversations on practical, social, and professional themes by speaking the language with sufficient structural precision. |

| | | |
|---|---|---|
| | 46-56 | Can typically handle basic constructions with accuracy, but lacks a full or confident command of grammar. |
| | 35-45 | Although there are many grammatical errors, a native speaker who is used to dealing with strangers attempting to speak his or her language can understand the speaker. |

**a. Vocabulary**

| Aspects | Score | Description |
|---|---|---|
| Vocabulary | 91-100 | Educated native speakers embrace all aspects of speech on all levels, including the variety of vocabulary and idioms,colloquialisms, and cultural references. |
| | 81-90 | Can understand and engage in any discourse within one's experience range with a high degree of vocabulary correctness. |
| | 71-80 | able to communicate well in most official and casual talks on practical, social, and professional themes with an adequate vocabulary He or she has a large enough vocabulary that he or she rarely has to look up a word. |

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

| | | |
|---|---|---|
| | 56-70 | Has a sufficient spoken vocabulary to communicate oneself purely using circumlocutions. |
| | 41-55 | Speaking vocabulary is insufficient to explain anything other than the most basic demands. |

**b. Pronunciation**

| Aspect | Score | Description |
|---|---|---|
| Pronunciation | 91-100 | Educated native speakers consider it to be equivalent to and fully accept it. |
| | 81-90 | Errors in pronunciation are quite rare. |
| | 71-80 | Errors never obstruct understanding, and native speakers are rarely bothered by them. The accent may be nonnative. Can effectively participate in most official and casual conversations about practical, social, and professional issues. |
| | 56-70 | The accent is understandable, though it is frequently incorrect. |
| | 41-55 | Pronunciation errors are common, but a native speaker who is used to dealing with foreigners attempting to speak his or her language may understand them. |

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

**c. Fluency**

| Aspect | Score | Description |
|---|---|---|
| Fluency | 91-100 | Has total fluency in the language, as evidenced by native speakers who are educated. |
| | 81-90 | Able to communicate smoothly in the language on all levels that are generally relevant to professional demands. With a high level of fluency, one may join in any conversation within one's experience range. |
| | 71-80 | can talk about a certain area of knowledge with relative comfort. Rarely have to stutter for words.. |
| | 56-70 | Most social interactions, including introductions and casual chats about current events, as well as work, family, and personal material can be handled with confidence but not with ease. |
| | 41-55 | There is no exact description of fluency. For an assumed level of fluency, look at the other four language categories. |

Adapted from H. D. Brown (2001, pp. 406-407).

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

**2. Statistical test**

a. Computing Descriptive Analysis of Pre-test and Post-test of Experimental and Controlled Class.

b. Scoring the students questionnaire by using scale likert and classifying the students'scro by using interval score.

**Table 4 : Animation Movie Questionnaire Score Classification**

| Interval Score | Classification |
|---|---|
| 32-41 | High |
| 21-31 | Average |
| 10-20 | Low |

**c.** Use data analysis Simple Linear with SPSS 25 version to find the effect of the independent variable.The researcher utilized a variety of tests to evaluate the variables, including the test normality, test linearity, test correlation, and the test value of Coefficient Determination Regression (SPSS).

# CHAPTER IV

# FINDINGS AND DISCUSSION

This chapter generally presents the findings of the research which are presented as data description, and the discussion of the findings reveals argument and further interpretation of the findings.In this chapter, the researcher analyzed the data obtained from the students pre test and post-test not only in experimental class but also control class.

## *A. Findings*

The findings of the research based on the results of the data analysis. The data analysis used to collect data. The test consisted of pre test and post-test. The pre -test was given to find out the students' background knowledge in speaking skills before presenting Animation movie as teaching media and the post-test was given to find out the increase of the students'speaking skill after giving the treatment.

1. **Scoring and Classfying the Students' Pre-test and Post-test scores of Both Groups by the speaking rubric score.**

**Table 5: The Rate Percentage of Both Class in Pre-test**

| No | Classsification | Experimental Group | | Control Group | |
|---|---|---|---|---|---|
| | | Frequency | Percentage (%) | Frequency | Percentage (%) |
| 1. | Excellent | 0 | 0 | 0 | 0 |
| 2. | Good | 0 | 0 | 0 | 0 |
| 3. | Fair | 3 | 15 | 6 | 30 |
| 4. | Poor | 12 | 60 | 10 | 50 |
| 5. | Very Poor | 5 | 25 | 4 | 20 |
| Total | | 20 | 100 | 20 | 100 |

Table 5 shows that, the rate percentage and frequency of the student's experimental and controlled class in the pre-test, the students got neither excellent and nor good score, and 3 (15%) students got fair score, 12 (60%) students got poor score and 5 (25%) students got very poor score. It means that, the students' score before given treatment were low. While the pre-test in controlled class there none of the students (0%) got in excellent and good score. There were 6 (30%) students got fair score, 10 (50%) students got poor score, and 4 (20%) students got very poor score. It means that, the students'score before giving treatment were low.

**2. Computing Descriptive Analysis of Pre-test and Post-test of Experimental and Controlled Class**

Before giving treatment, pre-test was conducted to both experimental and control class. The students score and their classification in experimental and control class are presented in the following table.

**Pre-test of Both Class**

**Descriptive Statistics**

| | N | Minimum | Maximum | Mean | Std. Deviation |
|---|---|---|---|---|---|
| Experimental | 20 | 36.00 | 61.00 | 50.8000 | 7.28083 |
| Controlled | 20 | 43.00 | 61.00 | 51.8500 | 8.89625 |
| Valid N (listwise) | 20 | | | | |

The table above shows that, the mean score of ecperimental class in pre-test was (50.8) and the mean score of controlled class in pre-test was (51.85). The standard deviation of experimental class was (7.280) and the standard deviation of

controlled class was (8.896). It can be concluded that there is not much difference score between the experimental and controlled class in pre-test. Even in this pre-test, the score of the controlled class is slightly higher than that of experimental class.

**Table 6: The Rate Percentage of Both Class in Post-test**

| No | Classsification | Experimental Group | | Control Group | |
|---|---|---|---|---|---|
| | | Frequency | Percentage (%) | Frequency | Percentage (%) |
| 1. | Excellent | 2 | 10 | 0 | 0 |
| 2. | Good | 9 | 45 | 3 | 15 |
| 3. | Fair | 5 | 25 | 9 | 45 |
| 4. | Poor | 4 | 20 | 6 | 30 |
| 5. | Very Poor | 0 | 0 | 2 | 10 |
| Total | | 20 | 100 | 20 | 100 |

Table 6 shows that, the post-test in experimental class there were 2 (10%) students got excellent score, there were 9 (45%) students got good score, 5 (25%) students got fair score, 4 (20%) students got poor score, and there was not student got very poor score. It means that, the using of Animation movie as teaching media was effective to improve students'sepaking skill. Beside that, the post-test in controlled class there none of the students (0%) got in excellent score. There were 3 (15%) students got in good score, 9 (45%) students got in fair score, 6 (30%) students got in poor score, and there were 2 (10%) students got in very poor score. It means that, the students score in post-test also was high a little than pre-test in control class.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

**Post-test of Both Class**

**Descriptive Statistics**

| | N | Minimum | Maximum | Mean | Std. Deviation |
|---|---|---|---|---|---|
| Experimental | 20 | 52.00 | 84.00 | 67.0500 | 9.35541 |
| Controlled | 20 | 45.00 | 71.00 | 58.3000 | 8.01380 |
| Valid N (listwise) | 20 | | | | |

The table above shows that, the mean score of experimental class in post-test was (67.05) and the mean score of controlled class was (58.3). The standard deviation of experimental class was (9.355), and the standard deviation of control class was (8.013). It can be concluded that there were many differences score between the experimental and controlled class in post-test and the experimental class gained the greater mean score than controlled class.

3. **Scoring the Students Questionnaire by using Scale Likert and Classifying the Students' Score by using Interval Score.**

**Table 7 Questionnaire Score**

| Interval | Score | Number of the Student | Percentage |
|---|---|---|---|
| 32-41 | High | 4 | 20% |
| 21-31 | Average | 12 | 60% |
| 10-20 | Low | 4 | 20% |

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

The table above shows the distribution of frequency and percentage of final score from the problems of the students'in speaking skills and the benefit of using animation movie as teaching media at the second grade students of SMPN 2 Sungguminasa after the researcher gave the students'questionnaires to measure their knowledge based on the aspects of animation movie. There were 4 (20%) students got high score, there were 12 (60%) students got average score, and there were 4 (20%) students got low score.

From the table above, it can be concluded that the results of the students' Problem in speaking and the benefit of using animation movie as teaching media Questionnaire score showed the most percentage were in the average category.

**4. Inferential Statistical Analysis**

To know the normality and the linearity of both variables, the researcher used the test normality and the test linearity by SPSS 25 version. We can see in table below.

**Table 8: The test Normality of the Variables**

**One-Sample Kolmogorov-Smirnov Test**

| | | Unstandardized Residual |
|---|---|---|
| N | | 40 |
| Normal Parameters[a,b] | Mean | .0000000 |
| | Std. Deviation | 6.98429282 |
| Most Extreme Differences | Absolute | .175 |
| | Positive | .175 |
| | Negative | -.077 |
| Test Statistic | | .175 |

| | |
|---|---|
| Asymp. Sig. (2-tailed) | .100[c] |

a. Test distribution is Normal.

b. Calculated from data.

c. Lilliefors Significance Correction.

**Table 9: The test Linearity of the Variables**

**ANOVA Table**

| | | | Sum of Squares | df | Mean Square | F | Sig. |
|---|---|---|---|---|---|---|---|
| Speaking Skilss * Animation Movie | Between Groups | (Combined) | 2431.358 | 14 | 173.668 | 3.566 | .003 |
| | | Linearity | 1746.341 | 1 | 1746.341 | 35.862 | .000 |
| | | Deviation from Linearity | 685.017 | 13 | 52.694 | 1.082 | .416 |
| | Within Groups | | 1217.417 | 25 | 48.697 | | |
| | Total | | 3648.775 | 39 | | | |

The test result of the normality and the linearity of both variables using the value of the residue indicates that the significant value was greater than 0.05. It could be conclude that the data from varibles with normal distribution with a significant value of 0.100> 0.05. and data from variables with a linearity distribution with a significant value of 0.416> 0.05.

To know whether there was any correlation between students' Animation movie as teaching media and Speaking skill, both variables were analyzed by using Pearson Product Moment Correlation on SPSS 25.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

**Table 10: The Correlation Data of Animation movie in Students Speaking Skills**

**Correlations**

| | | Animation Movie | Speaking Skills |
|---|---|---|---|
| Animation Movie | Pearson Correlation | 1 | .692** |
| | Sig. (2-tailed) | | .000 |
| | N | 40 | 40 |
| Speaking Skills | Pearson Correlation | .692** | 1 |
| | Sig. (2-tailed) | .000 | |
| | N | 40 | 40 |

**. Correlation is significant at the 0.01 level (2-tailed).

From the calculation of Pearson Product Moment Correlation, the researcher found the coefficient significant of students' Animation Movie in Speaking skills wa 0.00 < 0.5. Which means there was any correlation between Animation Movie and Speaking Skills. For the significance level 0.1 of the hyphothesis, the coefficient correlation was higher than the critical value of r table (0.692> 0.444). Therefore, for the first hyphothesis the null hyphothesis (H0) was rejected and the alternative hyphothesis (H1) was accepted.

Furthermore, simple regression was done to analyze how far contribution of animation movie in students' speaking skills. The variable entered was the independent variable which gives influence to the dependent variable. Then the result shows the coefficient determination was 465.

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

**Table 11: The Value of Coefficient Determination/Regression (SPSS)**

**Model Summary[b]**

| Model | R | R Square | Adjusted R Square | Std. Error of the Estimate |
|---|---|---|---|---|
| 1 | .692[a] | .479 | .465 | 7.076 |

a. Predictors: (Constant), Animation Movie

b. Dependent Variable: Speaking Skills

**Variables Entered/Removed[a]**

| Model | Variables Entered | Variables Removed | Method |
|---|---|---|---|
| 1 | Animation Movie[b] | . | Enter |

a. Dependent Variable: Speaking Skills

b. All requested variables entered.

From the analysis above, the R Square shows 0.479, it was interpreted that animation movie influenced 47.9% toward speaking skills. The result of this research showed that there was the effect of animation movie in students' speaking skills with a coefficient correlation of 0.692.

**B. *Discussion***

Based on the finding above, it could be concluded that the influence of animation movie in teaching students'speaking skills toward the second grade students at SMPN 2 Sungguminasa was effective. The researcher described the discussion in this chapter into three problems. They would be described as follows:

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

1. Students'ability in speaking skill by using animation movie as teaching media

Using animation movie in teaching speaking allow the students ability to learn correct pronounciation, fluency and to improve their vocabulary. Before the researcher giving the students a treatment the students still low in speaking because they less know how to pronounce the word correctly, and then the students also got less difficulty in modifying the words because the lack of vocabulary. Further, after giving treatment the students immediately know how to pronounce the words correctly and also they got a new vocabulary while they were watching animation movie. In addition animation movie contains audio and visual that can increase the level of students'interest. Therefore, we can see table 4 and table 5. It was indicated by the score of experimental class in pre-test was (7.280) with mean score was (50.8), while the score experimental class in post test was (9.355) with mean score was (67.05). It can indicate the result showed that the students' speaking ability was good after learning speaking by using animation movie as teaching media.

2. Students ability in speaking skills without using animation movie as teaching media

The students ability in speaking skill before a treatment almost the same with in experimental class where the students still low in speaking because they less know how to pronounce the word correctly, and then the students also got less difficulty in modifying the words because the lack of vocabulary. The students in control class not got a treatment with using animation movie as teaching media except for the researcher taught them, as usual, using conventional way strategy. So, the students

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

not got how to pronounce correctly and also they not got a new vocabulary from the other source like media in teaching speaking. The student seems feel bored during the learning process because the activity less interest, but also the researcher just give them a little knowledge how to pronounce the words if they asked the researcher, and then the students not too much got a new vocabulary, so they still difiiculty in modiyfying the words. It can indicate the result showed that the students' speaking ability was average after learning speaking by using conventional strategy.

3. The significant difference between using animation movie as teaching media or not in students'speaking ability

There are different significant by using and not using animation movie in teaching speaking skill. It can be concluded that the students'speaking ability can improve by using animation movie. The analysis data from the research has showed that in pre-test of experimental class achieved (7.280) and after giving treatment in post-test achieved (9.355), while pre test of contolled class achieved (8.896) and after giving treatment in post-test achieved (8.013). It is found the students in experimental class achieve higher score than the students in control class.

These result was supported by the theory in Imayati Kalean (2013) mentions that movie was effective in improving students' speaking ability. The most of students were interested in seeing the movie. This was possible since this speaking activity allowed students to explore their ideas. Meanwhile, the concepts presented here were intended to be descriptions of the things features, so students were free to

UNIVERSITAS ISLAM NEGERI ALAUDDIN MAKASSAR

express their feelings spontaneously. This investigation was good at improving their speaking ability.

In addition, Erwin Seftriarini (2016) Showed that using movie was effective to solve the students' problem in speaking. It indicates the students more active in teaching learning process with using movie as media, and the students were motivated to learn speaking, they enjoyed and interested to follow teaching and learning process.The presence of movie to improve students'speaking had given a significant progress toward their speaking ability.

Balambo Jamal Tahir (2015) investigated the impact of movies on learning the English language was explored in terms of students' perceptions, opinions, and attitudes toward learning the English language. The usage of movies in the ESL classroom has become an essential prerequisite for learning since movies, as current technology, will considerably assist students in understanding the second language.

The researcher could conclude from above findings and theory that Animation movie as teaching media is suitable to be applied in class or outside class the classroom in teaching speaking skill. The result of this study indicate that this animation movie has an effect in improving students'speaking skill. It was proved by the result of the data analysis being with simple linear regression (table 10).

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

Based on the result of this research, it was proven that the students' score were much higher after the treatment in Experimental class using animation movie in teaching speaking skill. The use of Animation Movie in teaching speaking surely beneficial improve students' speaking skill. It means that the treatment of Using animation as teaching media to the experimental class is effective.

# CHAPTER V

# CONCLUSION AND SUGGESTION

This chapter consists of two parts. The first part deals with conclusion of the findings and the second part deal with suggestion.

## A. *Conclusion*

Based on the findings in the previous chapter, the researcher has a conclusion that there is a significant influence of using animation movie on students' speaking skill where the contribution of animation movie to speaking skill was 47.9% and the coefficient correlation was high (0.692). Due to thi fact, the null hyphothesis H0 was rejected and the alternative hyphothesis H1 was accepted. Thus, prediction can be put forth that when students use animation movie toward their speaking achievement in English, their speaking skill tends to be better.

In this research, animation movie made the atmosphere in the classroom more relaxed and fun so that the students were interested in speaking out their feelings. By using animation movie as teaching media students can know how to pronounce some word and then they got some new vocabulary in animation movie.This way was effective to make them more confident in speaking English well.

## B. *Suggestion*

There was a lot of learning Strategy or Method to be used in teaching English learning process, but using animation movie is an alternative way of teaching speaking skill. Here are some suggestion as follows:

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
MAKASSAR

1. Using animation movie was suggested to use for teacher as an alternative strategy or method in teaching English especially speaking.
2. Using animation movie is a good way for the students in improving their skill in speaking. Usimg animation movie can help the teacher and gives much times to the students be active in speaking and make the students feel enjoy and enthusiastic in learning process.
3. The researcher suggested using this technique because it can be used for the beginner but also for advance itself.
4. Using animation movie was proven effective in teaching speaking skill, so it is suggested for further researcher to find out the significant of using animation movie in other English skills and levels.
