ACKNOWLEDGMENT

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

Alhamdulillahirabbil'alamin, I would like to express my highest gratitude to Allah SWT for the blessing, love, opportunities, health and mercy for me so that I as the researcher can complete this research. Also never forget to send Salam and Sholawat upon our prophet Muhammad SAW. This research entitled "An Analysis of Transitivity in the Late Show with Julie Andrews" is submitted as the final requirement of S-1 degree in English and Literature Department.

I am as the researcher fully realise that there are many individuals who have supported me in finishing this research. Therefore, I would like to give my great thanks to:

1. The Rector of UIN Alauddin Makassar, **Prof. Drs. Hamdan Juhannis, M.A., Ph.D.** and the Dean of Adab and Humanities Faculty, **Dr. Hasyim Haddade, S. Ag., M. Ag.** and his staff for their advice during the period when I studied at the university, especially in Adab and Humanities Faculty. The Head of English and Literature Department, **Dr. Jumharia Djamareng, M.Hum.** and secretary of English and Literature Department **Syahrani Junaid, S.S., M.Pd.**, for the continuous encouragement.
2. My sincere gratitude for my supervisors **Dr. Serliah Nur, S.Pd., M.Hum., M.Ed.** and **Dr. Sardian Maharani Asnur, S.Pd., M.Pd.** for their patience, motivation, support, and immense knowledge. Their guidance helped me in all the time of writing this research. Besides my

supervisors, I would like to thank to my examiners **Syahrani Junaid, S.S., M.Pd.** and **Dr. Muhammad Taufik, S.S, M.Hum.** for their question, correction and suggestion until completion of this research.

3. My gratitude to all the lecturers of Faculty of Adab and Humanities who have taught and educated me during my study in UIN Alauddin Makassar.
4. My endless sincere gratitude toward both my beloved parents, **Dra. Sitti Sidra Abukhaer** and **Hamdir** for giving birth to me and for their love, patience, guidance, unlimited sincere prayer for my successfulness, and for their support throughout my life and also for all of my younger brothers **Ahmad Hamidzar** and **Dzuhri Azhari.**
5. My special thanks to my friends or my **clasmates** **Rosmini, S.Hum., Dian Ekawati, S.Hum., Astrid, Rahma Dani, S.Hum.,** and the rest of **My Classmates.**
6. Also a huge gratitude for my dearest friend **Ilna Wati, S.Ag.**
7. As well as for my cousins **Miftahul Jannah, Fachdiyah Astiza Asrar, S.A.P.,** and **Mutiaturrahmah.**

Title : An Analysis of Transitivity in the Late Show with Julie Andrews
Consultant I : Dr. Serliah Nur, S.Pd., M.Hum., M.Ed.
Consultant II : Dr. Sardian Maharani Asnur, S.Pd., M.Pd.

This research discussed Transitivity in the Late Show with Julie Andrews. This research focused on finding the types of transitivity processes in the Late Show. The data were analyzed using the descriptive qualitative method. The theory that used in this research was Transitivity by Halliday (2004). The main instrument of the research is Note-Taking. The findings showed a total of 68 data found related to Transitivity Process in The Late Show with Julie Andrews. The conclusion of the research is all the transitivity processes are found in The Late Show with Julie Andrews. The most dominant Transitivity process is Material Process with 26 data, followed by Relational Process with 23 data, followed by Mental Process with 9 data, Behavioral Process with 4 data, Existential Process, and Verbal Process share the same amount with each of them have 3 data.

Keywords: *Transitivity, Transitivity Process, The Late Show, Julie Andrews*

CHAPTER I

INTRODUCTION

A. Background

People utilize language to convey a meaning when they speak or write. To ensure that the recipient understands the meaning accurately, good language is employed. It implies that the systematic functional theory's core object consists of two important elements: language and meaning. Articles, letters, stories, and novels are examples of written language, whereas conversation, oration, and presentation are examples of spoken language. Language is a set of symbols that allows individuals to communicate with one another. It can be in the form of spoken symbols, written symbols, or handwritten symbols (Kreidler, 1998: 19).

In order to communicate, we need another person to act as both a listener and a speaking partner at the same time. This action will result in a change in the language. Language differs not just in terms of who speaks it (its users), but also in terms of the context in which it is used (its uses). Because of this variety, it is unavoidable that misunderstandings between the hearer and the speaker occur frequently, particularly when both parties to the communication are non-native speakers Beji (2016: 328). The term "transitivity" describes how a phrase's meaning is expressed in general. It explains how speakers account for their observations of the world around them by encoding their mental picture of reality in language. The term "transitivity" is a semantic category in Systemic Functional Grammar that

reflects human recognition at the lexicogrammar level, both in written and spoken form. (Yuqiong & Fengjie 2018: 71).

Doing a good and clear communication process is also mentioned in the Al-Qur'an Surah Al-Isra, verse 53 as follows:

وَقُلْ لِعِبَادِي يَقُولُوا الَّتِي هِيَ أَحْسَنُ إِنَّ الشَّيْطَانَ يَنْزِعُ بَيْنَهُمْ إِنَّ الشَّيْطَانَ كَانَ لِلْإِنْسَانِ
عَدُوًّا مُّبِينًا ٥

Meaning:

“And tell My servants to say that which is best. Indeed, Satan induces [dissension] among them. Indeed Satan is ever, to mankind, a clear enemy.”

The verse above explained that Allah ordered the Messenger of Allah to tell all His servants to speak better words when talking or arguing with polytheists or others. So that they do not use harsh words and insults that will cause hatred, but should use words that are true and contain good lessons. Indeed, Satan is always trying to destroy the relationship between the believers and the disbelievers. Because Satan is a very real human enemy (Shihab, 2002).

One of the study that focuses on finding a better meaning in spoken or written language is Transitivity. Transitivity is a linguistic theory that is part of the experience Metafunction of Systemic Functional Linguistic. In a simple term, Systemic Functional Linguistic is concerned with the meaning of language, where each meaning is composed of several functional configurations. According to SFL theory, language has three functions. The first is the interpersonal function, which is designed to characterize the social relationship between language and its users. The system is made up of makers

who speak or write in both written and spoken languages. Physical and physiological activities (Material and Behavioral), thinking and speaking actions (Mental and Verbal), and acts that communicate the existence of something/someone and its defining features are all examples of processes that constitute human experience (Existential and Relational) (Roth & Nascimento, 2009: 322).

The Transitivity Process is made up of three parts. They are the Process, the Process Participants, and the Circumstances under which the Process takes place. Many different sorts of processes and the structures that enable them make up the transitivity system. The six categories of processes are material process, mental process, relational process, behavioral process, verbal process, and existential process. (Halliday, 1994:107).

Transitivity is an important semantic concept in the study of "representation of reality" since it allows us to evaluate the same event and scenario in multiple ways. Subjectivity enters the picture when we portray a scene or occurrence because we must interpret it as a semantic arrangement based on our subjective point of view, even though it appears to be all of a piece perceptually. The first two elements are the focus of transitivity. Simply expressed, the fundamental notion of transitivity is how to represent "who or what does what to whom or what?" (Simpson, 1993)

Speaking of Transitivity, the term is also used in a television program where people talk to each other or mostly known as talk show program. Talk program or talk show has enlivened electronic media. The phenomenal of this program as information in the media has resulted in the satisfaction that the community deserves is recorded through the needs of a more individualized

society. As a result of a combination of social background and past media experiences and takes the form of relationships from certain media, specific likes, and interests, usage habits. Interestingly, the phenomenon of packaging news information becoming a favorite in society. It shows that information is no longer merely a complement to programs on television and radio media.

With the fame of the Talk Show program where it becomes the main media ammunition and plays an important role in making a media, the researcher is interested in analyzing talk show programs. The talk show that the researcher wants to analyze is The Late Show (Putra, 2018). The Late Show is one of the American Talk show that has been aired from 2015 until the present day. The Late Show always invites many artists and actors or actresses to become guest stars where they share many things in their life. One of the guest stars that interests the researcher is Julie Andrews. She is an actress and a singer. She is a middle-aged artist who still active in the entertainment world today. The researcher picks Julie Andrews as the object because the way she speaks seems to be so inspiring and the researcher thinks that elaborating what she talks about in the show is necessary to gain more understanding.

Later on, the findings on the research shall be capable to demonstrate what is the language choices that happened in-process and participant forms of transitivity which have a significant impact on Julie's late show. As a result, the researcher chose the title: An analysis of transitivity in Late Show by Julie Andrews.

B. Research Question

Referring to the description in the background above, the researcher formulated the research question as follow:

1. What are the types of transitivity processes found in the late show with Julie Andrews?
2. What is the dominant type of transitivity process found in the late show with Julie Andrews?

C. Objectives of the Study

Based on the research question below, the researcher states the research questions as follows:

1. To find out the types of transitivity process found in the late show with Julie Andrews.
2. To find out dominant type of transitivity process found in the late show with Julie Andrews.

D. Significances of the Study

The study's significances were regarded from both a theoretical and a practical standpoint.

1. Theoretically, this thesis provided understanding about Transitivity, including the transitivity system, and transitivity process.
2. Practically, the analysis was practical for students interested in examining the structure of the transitivity process in Julie Andrews' late show. Not only that, but the analysis was important to the researcher as background knowledge for future transitivity research.

E. Scope of The Research

The researcher made a limitation on the research. The researcher was not discussing The Late Show with Julie Andrews in a whole. Instead, the researcher only focused on the Transitivity Process found in The Late Show with Julie Andrews. On analyzing the research, the researcher utilized the theory of Transitivity by Halliday (2004).

CHAPTER II

REVIEW OF RELATED LITERATURE

A. Previous Study

To complete the research, the researcher has to find some related research and read them to have a deeper comprehensive about the research itself. So that is why the researcher has found some previous research related to the current research. They are by Kobat (2021) with his research title "*An Analysis of Transitivity in Surah Al-Kahf*", Nurhayati (2016) with her research title "*A Transitivity Analysis On the Animation Movie Dialogues of Big Hero 6 Directed by Don Hall and Chris Williams*", and Hajar (2018) with her research title "*Transitivity Analysis of the Little Frenchman and His Water Lots By George Pepe Morris*".

Kobat (2021) in his thesis entitled "*An Analysis of Transitivity in Surah Al-Kahf*". This research utilizes the qualitative descriptive method as the method of the research. The research reveals that all six categories of processes, including material, verbal, mental, relational, existential, and behavioral processes, are present in Surah Al-Kahf. The material process is the most common process type, appearing 34 times. The second dominant type is followed by a verbal process 33 times. Meanwhile, other types are lower than them, which are mental process 10 times, relational process 6 times, and behavioral process 3 times. Lastly, the lowest one is an existential process that only found once.

Nurhayati (2016) in her thesis "*A Transitivity Analysis on the Animation Movie Dialogues of 'Big Hero 6' Directed by Don Hall and Chris Williams*". The purpose of the research is to determine the types of processes used in the animation film Big Hero 6's dialogue. The findings show that action verbs are

used in practically every scene in the film. This is in keeping with the concept of delivering that the main character is actually doing something rather than sensing or expressing anything. It is clear based on the film, the main character uses action verbs to describe the meaning that he or she has experienced.

Hajar (2018) in her thesis *Transitivity Analysis of "The Little Frenchman And His Water Lots"* By George Pope Morris. The purpose of this study is to discover transitivity elements using a descriptive qualitative method. The text comprises three elements of Transitivity, according to the analysis: Process, Participant, and Circumstance. Among the thirty-three clauses revealed, there are 33 Process clauses, 49 Participant clauses, and 26 Circumstance clauses. Among the numerous Material Processes, Monsieur Poopoo plays a key role as an Actor. The researcher wants the readers to immerse themselves in the main character's milieu, as seen by the frequent use of Circumstance of Location to gain better comprehension.

The researcher has found some similarities and differences between the previous research and the current research. The similarities are all the previous research and the current research are focused on analyzing Transitivity. Meanwhile, the differences are located in the object of the research. Kobat (2021) uses Surah Al Kahf as the object, Nurhayati (2016) uses Dialogues of 'Big Hero 6' movie as the object, and Hajar (2018) uses *The Little Frenchman and His Water Lots* novel as the object, while this research uses Late Show by Julie Andrews as the object. Not only that, by understanding the previous studies above the researcher gain a deeper understanding of Transitivity in general, and able to conclude that transitivity can be used in all literature in this case speaking,

writing, Short story, etc. considering this study the researcher will use the Transitivity in order to talk show material from the late show by Julie Andrews.

B. Pertinent Ideas

1. Definition of Transitivity

In his functional theory, Halliday in Ezzina (2015: 285) describes Experience and interpersonal relationships are transformed into meanings, which are then converted into words. The phrase, according to Halliday, is made up of three different yet interconnected metafunctions (the ideational, the interpersonal, and the textual). Each metafunction is concerned with meaning, and each meaning belongs to a separate functional configuration, constituting a distinct stance in the overall meaning of the phrase. The term "metafunction," according to Halliday, was coined to suggest that function was an important aspect of the entire theory.

According to Song (2013: 2291) Transitivity is a grammatical system that is made up of several types of processes seen in language and structures. Six processes, participants, and circumstances make to a process. Physical processes, mental processes, relational processes, behavioral processes, verbal processes, and existential processes are the six different types of processes.

In addition, Rahmawati (2019: 68) defines that The three strands of meaning are conceptual meaning, interpersonal meaning, and textual meaning. The grammatical system known as transitivity reflects the ideational meaning.

In relation to the theory above, Bartley (2017: 3) defines Transitivity as a tool that can reveal the numerous ways in which we can discursively portray the same social reality. Although Transitivity is useful for analysis, it

is not without flaws; as a result, he began to wonder how the theory could be improved in order to enable a more systematic analysis of written or spoken language, in addition on exposing the beliefs that echo throughout a piece of discourse.

Furthermore, Transitivity is a concept that explains experience as a sort of process involving people or participants and the circumstantial (Halliday, 1985:98). The choice of the sort of process and the role of the participants that are manifested into the reality of experience are connected to transitivity (Eggins, 2004:12). Transitivity can demonstrate how living things explain their experiences in relation to the reality that surrounds them. Doing, occurring, feeling, and being are elements of realistic aspects of experience (Halliday, 2004:101).

The role of participants can be involved or influenced when determining transitivity or the kind of process in a clause. Each sentence is connected with a separate role for participants to define the sort of process selected in that clause: actor, senser, behavior, sayers, extent, carrier (Halliday, 2004:103). Material, mental, verbal, behavioral, relational, existential, and meteorological activities are among the sorts of processes engaged in a sentence. The role of participants and the sort of process described in a clause are examples of experiential meaning and semantic components. As a result, transitivity does not evaluate a sentence since it might contain both simple and complex clauses.

Transitivity stands for describing the numerous sorts of processes that are acknowledged in the language, and the structures through which they are articulated (Gusnawaty, et al, 2017: 329) Transitivity establishes the many

sorts of processes that are known in language, as well as the structures represented by language users, based on this idea. The transitivity system is also known as the Clause as Representation, which indicates that the clause is viewed from the perspective of its role as a tool to represent anything, especially, as a tool to explain everything that occurs outside or within the human body.

The researcher draws the following conclusion based on the above description that the meaning of experience or experiential meaning is connected to what every living thing in the world experiences as a form of transitivity or process, such as what they feel, what occurs, and what is done. Transitivity is an important semantic term, grammatical system, and it consists of several sorts of processes present in language and structures that can be used in written or spoken language.

The researcher concluded that Transitivity is a semantic categorization system whose valence is centered on process elements. As a system, the process element in transitivity can be valenced with one or more participants. This depends on the type of process.

2. Transitivity System

The linguistic resource for realizing experiential meaning is transitivity. Process, participant, and context are the components of transitivity. In Halliday's view, transitivity is crucial to the clause's ideational purpose. A clause's ideational function is to depict patterns of "experiences" or, in the broadest meaning, "processes," which frequently contain "consciousness acts or occurrences and relations." (Halliday & Christian, 2004).

Transitivity holds a great significance on the study of reality's "representation" because it allows us to look at the same event or circumstance from numerous perspectives. Although the phenomenon appears to be all of a piece perceptually, subjectivity enters the picture when we represent a scenario or occurrence because we have to analyze it as a configuration of our subjective point of view (Halliday & Christian, 2004).

Transitivity explains how users of a language encode their mental representations in that language. It enables users of the language to classify an infinite number of events and occurrences into a small number of process kinds. It demonstrates "who does what to whom" in a clear and concise manner (Juan Li, 2010). The ways in which text and discourse selection can lead to representational manipulation may be reflected in transitivity analysis.

The clause's processes are divided into three categories: the process itself, which is expressed by the clause's verb phrase; the participants in the process, who are typically represented by noun phrases in the clause; and the circumstances surrounding the process, which are typically expressed by adverbial and prepositional phrases. Whether they reflect behaviors, events, mental states, or physical circumstances, processes can be classified. (Simpson, 1993).

Material, mental, and relational are the three fundamental process categories in the English transitivity system, which correspond to actions or events in the external world, the interior experience of consciousness, and the processes of classification and identification, respectively. On the borderlines between the three processes are three less clearly defined but distinguishable processes: behavioral (those that represent outer manifestations of inner

workings), verbal (symbolic relationships constructed in human consciousness and physiological states), and existential (those that represent outer manifestations of inner workings) (those that represent outer manifestations of inner workings) (processes concerned with existence) (Juan L, 2010).

Transitivity analysis reveals how the researcher attributes agency and process to the various participants in the text, providing a useful tool to investigate the ways in which language constructs reality in terms of how primary and dominant social agents, actors, or groups are categorized, characterized, represented, and polarized in discourse. (Juan L, 2010).

According to Simpson (1993), the term "transitivity" is used in a far broader sense than in classical grammars. It refers to how a phrase's meaning is expressed in general. It explains how speakers account for their observations of the world around them by encoding their mental picture of reality in language. The transmission of ideas is a feature of language's ideational function, and transitivity is concerned with this.

Process, participant, and circumstance are semantic concepts that describe how real-world phenomena are represented as linguistic structure in the broadest sense. (Halliday and Christian, 2004).

Table 1: Typical Functional and Phrase Classes

Type of element	Typically realized by
Process	Verbal Group
Participant	Nominal Group
Circumstance	Adverbial Group and Prepositional Phrase

For example:

The dog	chased	The rabbit	Quickly	In the forest
Participant	Process	Participant	Circumstant	Circumstant

The researcher concluded that Transitivity system is a system that describes experience as a type of process associated with participants and circumstantials. Transitivity is related to the selection of the type of process and the role of the participants that are realized into the reality of experience. Transitivity can show how living things describe experiences based on the reality that is happening around them. Aspects of experience based on reality consist of: doing, happening, feeling, and being.

3. Transitivity Process

Halliday in Rahmawati (2019: 71) identifies six types of processes: material, mental, relational, behavioral, verbal, and existential processes. The transitivity process position in clause reflects activities or doing, speaking, behavior, feeling, existential, relationship, and other things in the sentence written. The six types of transitivity processes include material, mental, verbal, relational, behavioral, and existential processes.

When it comes to the creation of a process, there are a few factors to keep in mind. A process will not exist until each of its basic components plays a part. The process elements, according to Halliday (2004), are the process itself (process), participants (participants), and circumstants (optional) factors.

Our most strong idea of reality, according to Halliday, is that it is made up of goings-on: doing, occurring, feeling, and being. These goings-

on are organized in the semantic system of language and articulated through clause grammar. This quotation clarifies that in the clause as representation, the clause serves as a tool for expressing all that occurs, namely the process. The process might take the form of an action, a sensation, or an experience, as well as all of the events and realities that surround us.

In functional grammar, the term process has a specific meaning that differs from its ordinary meaning. He went on to say that the procedure 1. serves to demonstrate all that occurs in clause 2. serves to indicate the intent (thing). In the category of verbs that operate as processes, the purpose is indicated. The process in the transitivity system is described as follows:

a. Material Process

The first process type is the material process. It is simply a process of 'doing'. This process typically involves verbs of physical activities such as 'run', 'wash', and 'do' (Almnaseer & Abbas 2019: 12). The material process is the act of doing or attempting to achieve something. One or more participants might be present in a clause throughout the material process. "What does A do?" is the criteria for testing material processes on one participant in a clause. Furthermore, while testing the process with two participants, the question "what did A does to B?" may be asked, and when testing the process with three people, the question "what did A does to B to C?" can be asked (Halliday, 2004:179).

Participants in the material process play the roles of actor, goal, scope, and client. The participant is essentially an actor who performs an activity. Furthermore, participants can become Goals who are affected by their occupations, as well as Beneficiaries, who act as people who are given

something. Furthermore, participants serve as a boundary for events by acting as a scope. For example:

She	is standing	right in front of	me
actor	process material	circumstant	goal

Anna	Went	To Jakarta
actor	process material	circumstant

According to Halliday, the range of a material process reflects the process's domain of operation or the process itself. The process's beneficiary is the person who is expected to benefit from it. There are two types of beneficiaries in the material process: recipients and clients. A recipient is someone who receives things, whereas a client is someone who receives services. (Halliday and Christian, 2014).

These are only doing processes. There are two basic participant roles connected with material processes. The first is the doer, referred to as the Actor (or Agent by certain language analysts): Even though the Actor isn't specifically stated in the clause, every material process has one. Simpson (Simpson, 1993). Simply, an actor means a constituent from the clause that commits an act. If the clause only has one participant and is active, the participants are actors (Eggins: 1994).

Material processes may consider transactions with items and transactions with humans as "things," according to Theo. The idea is to

distinguish between different types of activity that have an impact on people and actions that have an impact on the sort of other things. The first is an interactive transaction, whereas the last is an instrumental one.

b. Mental Process

Material clauses are concerned with our experience of the tangible world, whereas mental clauses are concerned with our experience of the world of our own awareness (Halliday & Christian, 2004).

Song (2013: 2292) defines Mental processes are sensing processes in which the Senser and the Phenomenon are both possible participants. Participants in this mental process are called sensers and phenomenon. Sensers are animate creatures that can feel, think and see. Phenomenon is an object that can be "felt, thinking and viewed" (Eggs: 1994). The phenomenon is what is sensed, felt, thought, and seen. The words "feel" and "believe" are used to describe mental processes.

The meaning of ideas and feelings is encoded by the mental process. Mental processes differ from material processes in that they do not ask "to take action or action" that is actual or palpable, but are instead connected to mental reactions. Halliday categorizes mental processes into four groups. Affection (liking, loving, fearing, hating, admiring, and missing), cognition (thinking, knowing, believing, doubting, remembering, forgetting, and understanding), and volition (believing, doubting, remembering, forgetting, and understanding) are all aspects of perception (seeing, hearing, noticing, feeling, and smelling) are the four types of Mental Processes, according to Lock (1996: 105). (wanting, needing, desiring, hoping, and wishing). Mental

processes are described as two-way processes in the language, but there is no equivalent bidirectionality in Material clauses. (Lock, 1996). For example:

Cause I	don't care	Too much for	Money
Senser	Process mental	Circumstance	Phenomenon

She	Doesn't understand	My messages
Senser	Process mental	Circumstance

c. Behavioral Process

Behavioral processes are made up of both mental and physical processes. This process refers to psychological processes as well as expressing the shape of action. Most behavioral processes only require one person, referred to as a behavior, to be present. Participants in this process are called behaviors, and are usually animate creature (Eggins: 1994). Furthermore, contextual components that clearly describe ways and causes are frequently seen in behavioral processes. (Halliday, 2004).

Breathing, coughing, smiling, dreaming, and staring are examples of (usually human) physiological and psychological behavior (Eggins, 2004). The most common pattern is a clause comprising solely of the words Behavior and Process, such as "Don't breathe!" or "No one's listening, He's always complaining." Manner and Cause are two of the most common conditions. (Halliday & Christian, 2004).

Behavioral processes represent Behaving, smiling, and laughing are examples of physiological behaviors and characterize the outside expression

of inner working. In most behavioral processes, there is one aware participant called the Behavior. For Example:

She	looked at	the carving
behavior	Behavioral process	circumstant

She	Cried	Loudly
behavior	Behavioral process	circumstant

d. Verbal Process

The process of expressing or saying anything is referred to as verbal process. There are three people engaged in this process: the sayer, the receiver, and the verbiage. Sayer is an active participant in the verbal exchange. The receiver is the person who is being addressed by the speech process. A notional description of the speech process is referred to as verbiage. Furthermore, circumtants are frequently seen in linguistic processes that express the route (Halliday, 2004).

When the lexical verb is said, a verbal group understands the process of a "verbal" phrase. According to Bloor & Bloor, the Sayer added an extra layer of meaning to the speaking act by utilizing verbs like an urge, explain, remind, challenge, beg, promise, grumble, agree, report, lisped, growled, whispered, snarled, barked, bawled, babbled on, and gasped. (Bloor and Bloor, 2004). Anything that involves the act of speaking is referred to as a verbal process. In the verbal procedure, three people are involved, For example:

You	Say	goodbye
sayer	Process verbal	verbiage

Amy	asked	Me	A question
Sayer	Process verbal	receiver	verbiage

Participants from verbal processes are Sayers (perpetrators of the process), receivers (to whom the expression is intended / the opposite speaking), the target (who is discussed), and verbiage (the core of the talks spoken in one noun or clause (Egins: 1994). For instance, "I asked her if she had heard him." Rather than depicting what the Sayer said as a citation of the specific words used (Quoted) or the idea represented in those words (Reported), verbiage categorizes what was said in terms of its character as an expression. Quoted and Reported, on the other hand, are not clause participants because they are distinct from Sayer and Process.

e. Relational process

Being or belonging is fundamental to the relational process. The three forms of relational clauses used in English are intensive, possessive, and circumstantial. Each of these states may be classified based on whether it is used to attribute quality to something (attributive) or to determine/identify something (determinative) (identifying). The responsibilities of players in the attributive process are carriers and characteristics. It is impossible to passivize a sentence with an attributive procedure. The grammatical subject is always a carrier in this case. In the meanwhile, the players' responsibilities in the

identification process are tokens and values. Passive clauses can be used in the identifying process (Halliday, 2004). For example:

	(I) Attributive	(II) Identifying
Intensive	Andy is kind	Andy is the best
Possessive	John has a guitar	The Guitar is John's
Circumstantial	The Concert is on Friday	Yesterday was the 13th

Harbi et al. (2019: 47) demonstrate how relational processes construct the being and having relationships between two people. Identifying and Attributive Relational Processes are the two types of Relational Processes. Token and Value are the participants in identifying, which serves the aim of defining. Value is used to define Token's identity, whereas Attributive is used to describe it. For example:

Hey Jude	don't be	afraid
carrier	process relational	attribute

You	Are	Very smart
carrier	process relational	attribute

States of being are involved in relational processes (including having).

Relational clauses are used to describe and identify something. Relational processes address the process of being in the world of abstract relations. In most cases, an abstract link between two process participants is investigated,

but unlike in a material process, a participant has no physical impact on the other.

According to Halliday, Attributive and identifying relational processes are the two types of relational processes. The process of assigning a quality is included in the attributive relational process. "a is a property of x." While the relational process of identifying assigns an identity to anything. It denotes the use of one entity to identify another. For instance, "a identifies x" or "a serves to define x's identity." In the English system, there are three primary categories of relation: intense, possessive, and circumstantial, each of which has two distinct modalities of being attributive and identifying. (Halliday & Christian., 2004).

In attributive relational clauses carrying each character called the carrier and the character with attributes. Attributes usually appear as an uncertain nominal group or nominal group with an adjunctive. Inversely proportional to attributive relational, participants from relational identification processes are tokens, The Form, Value, and Function (Eggins: 1994).

Because the only attributive and identifying modes in this research focus on intense processes, a comprehensive explanation of the other categories (circumstantial and possessive) is not required.

f. Existential Process

Based on Almnaseer & Abbas (2019; 13), existential processes imply that something exists or happens. They are often used with the dummy subject 'there' or with a circumstantial element of place or time. When used in narratives, At the start of the novel, existential procedures are used to introduce significant characters in the placement stage (settings).

Furthermore, Siham (2017: 16) states existential processes are those that express the existence of something by 'existing' and 'happening.' The clause recognizes this type of process. There is a subject in the existential process, but it has no experiential significance in the system of transitivity.

The existential process is a method of demonstrating something's existence. This is demonstrated in English with a sentence construction with the grammatical subject "there is/are." There is just one player in this process, which is the existing or anything that is raised. (Halliday, 2004). In the following example, the word "there" is neither a participant nor a circumstance. The word "there" does not denote any function or role in a clause's transitivity structure, but it does denote a feature of existence and is necessary as a Subject.

For example:

There	is	a snow	On the ground
Existential	Process existential	Existent	Location: temporal

There	will be	a real bun fight	At the next meeting
Existential	Process existential	Existent	Location: temporal

4. The Late Show by Julie Andrew

Hongli & Jingjing (2018: 42) defines A talk program is referred to as a "talk show." A recurring pattern is a discourse between a host and one or more guests. Although conversation analysis and discourse analysis have been used to examine question-answer adjacency pairs in a variety of face-to-face

discourse types, such as casual conversation, courtroom interaction, classroom interaction, and doctor-patient dialogue, they have not been applied to the examination of question-answer adjacency pairs in casual conversation and narrated television, talk shows are a relatively new and understudied area of pragma linguistic studies.

The talk show is one kind of television programs that provided information by interviewing sources related to the topic being discussed. With the explanation of the talk show itself, the researchers made the explanation exposure as a reference in the research process to determine the nature and the characteristics of a talk show in order to omit the emergence of ambiguities to research topics.

The Late Show is an American late-night talk show hosted by Stephen Colbert, which was premiered on September 8th 2015, and still aired today. The Late Show with Stephen Colbert has gained mostly positive reviews. It is one of the most famous talk-show in America. The highest ratings to date and highest for the Late Show franchise were achieved by a live episode that ran after Super Bowl 50 in 2016, which averaged 21.1 million viewers (John, 2016). One of the guests on the Late Show was Julie Andrews.

Julie Andrews is an actress and singer. She is known as one of the actresses in the musical film “The Sound of Music”. The 1965 film is one of the most successful musicals of all time. The songs in the film, including “Edelweiss”, “The Sound of Music”, and “Do-Re-Mi”, are still played and sung around the world to this day. The CDs of the songs were recycled and are still selling well. The story in the film was repeatedly adapted into various versions and performed in shows in many countries. Julie Andrews' life

journey has been written in three different books, namely Julie Andrews: A Life on Stage and Screen written by Robert Windeler, Julie Andrews: An Intimate Biography written by Richard Stirling, and Home: A Memoir of My Early Years.

C. Conceptual Framework

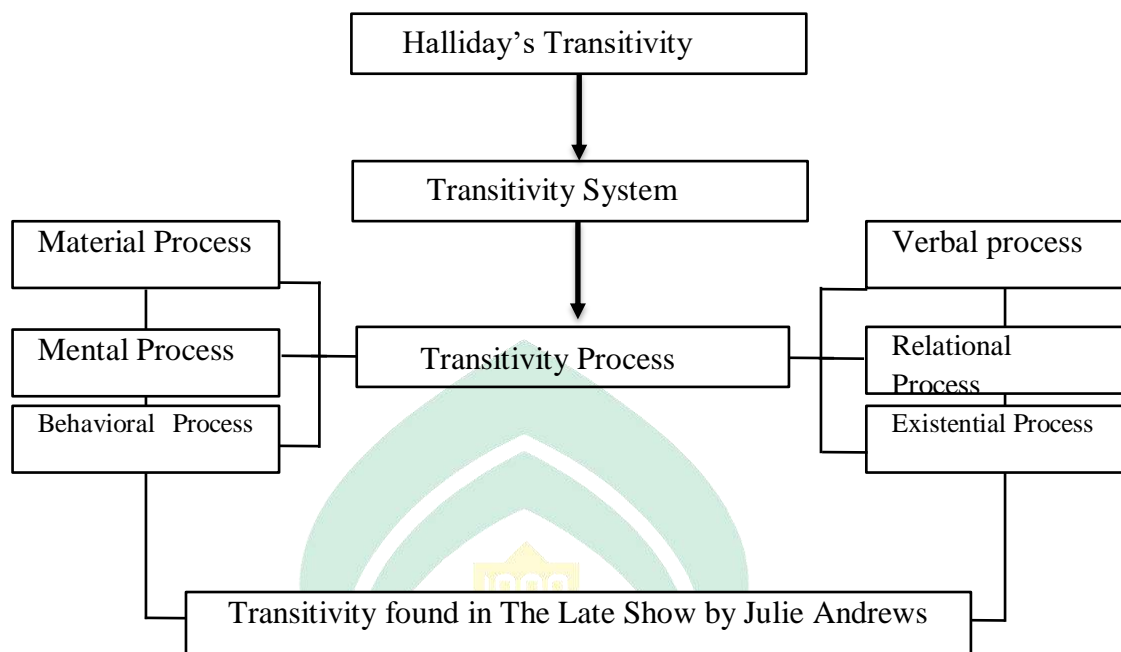

Figure 1. Conceptual Framework

By referring to the conceptual framework provided above in Figure 1, the researcher conducted a spectating process toward the show in order to identify some related data from the show. The data itself was in form of dialogues, monologues, that related to Transitivity in the Late Show program.

The research was analyzed with the theory of Transitivity theory by Halliday, by revealing two related terms of Transitivity. The first is the Transitivity System. The second is the Transitivity process which including the Material process, Mental process, Behavioral process, Verbal process, Relational process, Existential process.

The researcher watched The Late Show with Julie Andrews several times and gain a deeper understanding of the show. The researcher used Note-Taking to collect the show data and write down the data in dialogues or monologues forms.

CHAPTER III

METHODOLOGY OF THE RESEARCH

A. Research Method

The researcher used descriptive qualitative as the method for the research. The goal of descriptive qualitative research is to come up with explanations for social phenomena. That is, it seeks to aid understanding of our social environment and why things are the way they are. Furthermore, Qualitative research is concerned with the description and interpretation of data, and it can lead to the development of new concepts or theories, as well as an assessment of an organizational process. (Edi Subroto, 1992).

B. Source the Data

The source of data for the research were collected from a show called The Late Show. The late show has been aired since 2015 until today. The Late show itself has many episodes, but the researcher only took the episode where Julie Andrews is the guest star in the show. There is one episode called “Julie Andrews: Therapy Saved My Life’, where Julie Andrews was presented as the guest. The episode has 9 minutes and 15 seconds where Julie Andrews was explaining her various experience. The researcher created the transcript of Julie Andrews explanations of her experiences for a clearer analysis. The episode downloaded from YouTube.com.

C. Instrument of The Research

The instrument that used in this study is note-taking. Note-taking is a method of collecting data that requires the use of note cards to jot down

information gathered from various sources (Ray, 2005: 13). In a descriptive qualitative study, taking notes can be an effective instrument. (Yin, 2011: 516).

D. The procedure of Collecting Data

To collect data from the data source, the researcher conducted some steps as follows:

1. The researcher watched all the selected episodes of The Late Show with Julie Andrews.
2. During the watching process, the researcher identified the transitivity process in The Late Show with Julie Andrews.
3. The researcher wrote down clauses or sentences that contain transitivity.

E. Data Analysis Procedure

There were several processes that performed when analyzing data. According to Miles and Huberman (2014: 8), there were three steps for analyzing current flow data: data reduction, data display, and conclusion drawing. The data obtained from the research was evaluated in the following steps:

1. Data Reduction

Data reduction is a type of analysis that involves reducing, classifying, directing, and discarding unneeded data as well as arranging the data that has been identified. As a result, the decreased data would provide a clearer view, making it easier for researchers to acquire additional data or look for it when needed.

2. Data Display

The term data display refers to a collection of information structures that make it possible to carry out research conclusions. The data is presented in

such a way that it is possible to identify significant patterns and form conclusions. It was easier to comprehend what is going on and plan the next steps based on what has been learned by showing the data.

3. Drawing Conclusion

The final stage is to make conclusions and verify them. Because the first findings presented are just temporary, and will alter if there is no solid evidence to support the next data collection, verification is carried out. However, the drawn conclusion was regarded as credible if the findings reached are backed by reliable and consistent evidence.

CHAPTER IV

FINDINGS AND DISCUSSION

This chapter presents the findings of the research and discussion related to the focus of the research, in this case the Transitivity system in the Late Show where Julie Andrews presented as the guest of the show. In collecting data, the researcher used the theory of Transitivity by Halliday (2004).

A. Findings

In this section of the chapter, the researcher revealed the data that have been collected regarding to the focus of the research. The findings of the research which in form of analysis result of the monologue, statements, or narration from Julie Andrew in Late Show based on the Transitivity theory of Halliday (2004), in this case the Transitivity system and Transitivity process.

The researcher used an episode of Late show with Julie Andrews, where the title of that episode is “Julie Andrews: Therapy Saved My Life”. In that episode, she told a story about her first movie, her first book, and her bad experience which was resolved by a therapy. Julie Andrews used simple sentences where it was quite easy to comprehend, since the platform is the Late show, which is a talk show, thus, Julie Andrews utilized simple sentences. Julie Andrews was also using active and passive sentences in her statements. In order to display the data better, in this section of the chapter, the researcher would only show the findings in a whole based on the types of Transitivity process, after that the detailed explanation would be presented in the second section of this chapter, the discussion section.

The findings of the research indicated that dominated Transitivity process are Material Process with 26 data, followed by Relational Process with 23 data, followed by Mental Process with 9 data, Behavioral Process with 4 data, Existential Process and Verbal Process share the same amount with each of them have 3 data. Therefore, the total amount of data is 68 data of Transitivity process.

1. Transitivity Process found in the Late show with Julie Andrews

a. Material Process

Material Process is the most dominated Transitivity process found in The Late Show with Julie Andrews. Material process according to Halliday (2004), is the most general form of the Transitivity Process, since it is marked with the existence of participant and words that indicated general activities, or simply known as verbs. Here are the data in form of clause that are classified as Material Process.

Data	Actor	Material Process	Goal	Circumstant
Data 1 (00.02.44)	Everybody on the film	wanted	to make it	as astringent as possible
Data 2 (00.03.49)	He	gave	it	strength
Data 3 (00.04.14)	I	late	to give away	such a beautiful, wonderful scene
Data 4 (00.03.20)	Who	used	to be there	-
Data 5 (00.04.15)	They	lit	that scene	-

Data 6 (00.04.25)	They	lit	it	with huge klieg lights
Data 7 (00.04.48)	The carbons	rubbing in	the lamps	-
Data 8 (00.05.08)	They	put	new carbons	-
Data 9 (00.05.11)	It	did	it	-
Data 10 (00.05.25)	We	went	to lunch	-
Data 11 (00.06.05)	We	shut up	-	-
Data 12 (00.04.54)	It	Seemed	like a terrible comment	on our acting
Data 13 (00.05.13)	It	got	so bad	
Data 14 (00.06.34)	Who	helped	me	with the book
Data 15 (00.06.49)	Emma	helped	me	with tremendously
Data 16 (00.06.59)	She	brings out	the worst	in me
Data 17 (00.07.59)	Who	really tipped	me	into wanting to go to therapy
Data 16 (00.08.10)	He	had	clarity	-
Data 19 (00.08.12)	I	admired	so much	-
Data 20 (00.08.14)	I	wanted	that	for myself
Data 21	I	didn't	feel	i'd had it

(00.08.15)				
Data 22 (00.08.17)	I	went and got	into it	-
Data 23 (00.08.26)	It	helps	anybody else	-
Data 24 (00.03.41)	We	've (have) stayed	friends	over the years
Data 25 (00.05.54)	I	will shoot	at the door	-
Data 26 (00.07.09)	I	can't possibly repeat	all of them	-

Table 1. Clauses with Material Process

On the table above, the Material process on the narration of Julie Andrews was indicated by the use of verbs and verb phrase which related to physical activities namely: wanted, (have) stayed, gave, late, lit, were tipped down, rubbing in, put, did, went, will shoot, shut up, helped, Seemed, helped, got, brings out, can't possibly repeat, really tipped, had, admired, didn't feel, and went. These verbs are directed on the use of positive connotation, since she was referring to some people including herself, who were involved in her three main narration, her first movie, her first book, and her therapy experience.

Meanwhile, the actors of the Material process are, everybody, we, he, I, they, the lamps, the carbons, it, who, Emma, and she. The Circumstant's existence was randomly appeared, depends on the context of the clauses. There are various actors in addition to actor 'I' on the data above, which referred to certain people or inanimate objects. The actor 'Everybody' referred to the people who was involved in the process of her

first movie production in the past. There are two actors 'He' which was referring to the Director of the Movie, Robert Weiss, and her friend Mike Nichols. The actor 'They' referred to the movie crew. The actor 'The lamps' and 'the carbons' referred to the material they used in a certain scene on her movie. There are two actors 'Who' was referring to, the first is her friend named Emma, and the second is also her friend, Mike. The actor 'She' referred to her friend Emma. The actor 'It' is referring into two things, the first is things that related to her movie production, and second is about her therapy.

Furthermore, about the clause, Halliday (2004) state that Material Process can be existed in the form of transitive clause and intransitive clause. Based on that theory, the researcher only found intransitive form in the narration of Julie Andrews.

b. Relational Process

Relational Process is the second most dominated Transitivity process found in The Late Show with Julie Andrews. According to the theory, Relational Process is divided into three, they are Intensive, Possessive, and Circumstantial (Halliday, 2004). In the Late Show with Julie Andrews, there are two types that was founded by the researcher, they are Intensive, with total of 22 data found, and Possessive with only 1 data found. Here are the data in form of clause that are classified as Relational Process.

Data	Actor	Relational Process	Attribute	Circumstant
Data 27 (00.01.04)	It	is	a pleasure	to see you again
Data 28 (00.03.40)	He	's (is)	a great guy	-
Data 29 (00.03.54)	-	was	very kind to work with	-
Data 30 (00.03.48)	He	was	the glue	that held the whole thing together
Data 31 (00.03.41)	We	've (have)	stayed friends	over the years
Data 32 (00.05.58)	Which	was	great serendipity	-
Data 33 (00.03.23)	It	wasn't	Pleasant	-
Data 34 (00.04.42)	The lamps	were	tipped down to give	a shafts of moonlight
Data 35 (00.06.06)	It	was	just fine	-
Data 36 (00.05.54)	I	will	shoot at the door	-
Data 37 (00.05.33)	It	's (is)	very hard	to be nose to nose doing a love scene
Data 38 (00.05.28)	I	wouldn't	giggle anymore	-
Data 39 (00.06.17)	She	's (is)	such a chum	-
Data 40 (00.07.09)	I	can't	possibly repeat all of them	-
Data 41	I	get to be	pretty	-

(00.07.01)			raunchy and wicked	
Data 42 (00.07.44)	Separations	were	always inevitable	-
Data 43 (00.07.49)	The marriage	was	Over	-
Data 44 (00.07.51)	My head	was	so full	of clutter and garbage
Data 45 (00.07.58)	It	was	Mike Nichols	-
Data 46 (00.08.08)	He	was	so sane, funny, and clear	-
Data 47 (00.08.41)	There	's(is)	no harm	in sharing it
Data 48 (00.08.49)	Anybody	that is	lucky enough	to have it

Table 2. Clauses with Relational Process (Intensive)

Data	Actor	Relational Process	Attribute	Circumstant
Data 49 (00.06.30)	She	's (is)	my lovely daughter's godmother	-

Table 3. Clauses with Relational Process (Possessive)

On the table above, the relational process on the narration of Julie Andrews, both in the Intensive and Possessive were indicated by the use of to be namely: is, was, were, would, can, have, and be. These verbs were used by Julie Andrews to describe about the traits or characteristic on the entities, whether it was a human being, For example, her friends or colleagues; or other inanimate objects, such as her mental condition, or her divorce.

c. Mental Process

Mental Process is the next Transitivity process found in The Late Show with Julie Andrews. According to the theory, Mental Process can be defined when one of the four indicators are existed, they are Affection, cognition, volition, perception (Halliday, 2004). Here are the data in form of clause that are classified as Mental Process.

Data	Senser	Mental Process	Phenomenon
Data 50 (00.01.27)	I	Feel	the same way about you
Data 51 (00.02.12)	I	thought	the music was lovely
Data 52 (00.02.35)	I	thought	it could have been with the real stuff outside
Data 53 (00.02.57)	I	Felt	like it was maybe saccharin at that time
Data 54 (00.03.55)	I	Love	what he did in the film
Data 55 (00.07.05)	I	think	she gets shocked sometimes
Data 56 (00.08.04)	I	don't think	he'd mind me saying that now
Data 57 (00.08.43)	I	think	everybody knows the great work it can do
Data 58 (00.08.53)	I	think	that it would be wonderful

Table 4. Clauses with Mental Process

On the table above, the Mental process on the narration of Julie Andrews, was including various emotion, including feel, thought, felt, love,

and think. These emotions were expressed by Julie Andrews to describe about herself only, since the only sener in the clauses above was “I”.

d. Behavioral Process

Behavioral Process is the next Transitivity process found in The Late Show with Julie Andrews. According to the theory, Mental Process is about sensing and doing, or simply defined as an activity where a feeling is presented (Halliday, 2004). Here are the data in form of clause that are classified as Behavioral Process.

Data	Behaver	Behavioral Process	Circumstant
Data 59 (00.05.19)	I	giggle	at the slightest things
Data 60 (00.05.21)	Bob Weiss	realized	we were impossible
Data 61 (00.07.37)	I	separated	from my lovely first husband
Data 62 (00.05.28)	I	wouldn't giggle	anymore

Table 5. Clauses with Behavioral Process

On the table above, the Behavioral Process on the narration of Julie Andrews was describing her behavior in two different type of situation, the first is her movie making activities with the director, which based on the behavioral process was more of a happy behavior; meanwhile, the second one was mentioning about her separation or divorce with her first husband which is including sadder aura.

e. Verbal Process

Verbal Process is the next Transitivity process found in The Late Show with Julie Andrews. According to the theory, Verbal Process is when the sayer mentioned the word that indicates an intention of saying or pronouncing something, such as say, talk, etc. (Halliday, 2004). Here are the data in form of clause that are classified as Verbal Process.

Data	Sayer	Verbal Process	Verbiage
Data 63 (00.05.51)	Robert Weiss	said	that I know what we'll do
Data 64 (00.06.01)	He	said	you can laugh all you like
Data 65 (00.05.00)	Chris	was saying	oh Mariela, I Love you, it groans

Table 6. Clauses with Verbal Process

On the table above, the verbal Process on the narration of Julie Andrews was describing about her experience when making her first movie. In the Verbal Process above, she was not included as a sayer at all, instead it was her colleagues that was included, in this case Robert Weiss (the movie director), He which referred to Robert Weiss, and Chris (the actor of the movie).

f. Existential Process

Existential Process is the last Transitivity process found in The Late Show with Julie Andrews. According to the theory, Existential Process is defined when the word “*there*” existed to indicate the existence or presence of any being or called existant, and situation or called circumstant, or both of

them at the same time (Halliday, 2004). Here are the data in form of clause that are classified as Verbal Process.

Data		Existential Process	Extent	Circumstant
Data 66 (00.03.15)	There	were	Sets	we were on that
Data 67 (00.06.39)	There	's (is)	One	before that
Data 68 (00.06.44)	There	was	a book called Home	

Table 7. Clauses with Existential Process

On the table above, the Existential Process on the narration of Julie Andrews was describing about her experience when making her first movie, and her books. In the Existential Process above there are three verbs used were, is, and was.

As an additional explanation, there are some clauses that have two process, they are the clause "*We've (have) stayed friends over the years*" which is in Data 24 recognized as Material Process, and in Data 31 recognized as Relational Process; the clause "*I will shoot at the door*" where in Data 25 considered as Material Process, and in Data 36 recognized as Relational process; the clause "*I wouldn't giggle anymore*" where in Data 38 considered as Relational Process, and in Data 59 considered as Behavioral Process; and the clause "*I can't possibly repeat all of them*" where in Data 26 recognized as Material Process, and in Data 40 considered as Relational Process.

Furthermore, Halliday (2004) explains that clauses have the function on representing something. in the Clause as Representation serves as a tool to

express everything that happens, namely the Transitivity, which later divided into several types, based on what to explain. The process can be an action, feeling and experience as well as all events and reality around us. He further explained that what is meant by process are to show everything that happens in the Clause, and to show intent (things). The intention is implied in the group of verbs that act as processes.

From that explanation, it can be understood that Transitivity, including the six types, are having the function to explain various experiences. In the case of Julie Andrews, she utilized the Transitivity to explained three major experiences that she had in her past, they are her movie production process, her first book, and her therapy process.

If we looked into the video, Julie Andrews deliver her narration with such delightful, way even though what she explained was not all about the experiences only, but there were also some meaning and intent. With the help of the transitivity theory which separate the narration into clauses to find the meaning and the intent.

Furthermore, as what can be seen from the video, at the beginning of the show, Julie Andrews was asked about her first movie. She was not only explained about her happiness about the movie, but also what made her so excited about the film itself, and how they managed to successfully overcome the problem that existed in the production. She described about her movie director, how he was fully committed on the movie, about the amazing other actor she worked with. What she tried to imply in the discussion about her movie was, there are many

people who were included in that movie, they were fully committed on making it, and tried many ways to solve the problem they had during the movie production.

The second thing that she was asked about was her first book. Similar to what she described in her movie making production. She mentioned about how the book she wrote, as well as the person that helped her composing the book, and how that person made her show her true self. In this story, she implied about how big was the impact on her friends help on writing her first book.

The last thing that she was asked about was her therapy. She mentioned that she was separated with her first husband which led her to have depression and lost her passion in life. She mentioned implicitly that she did not have the intention to heal her mental problem, until once again, with the help and suggestion of a friend, she finally decided to take a therapy which eventually saved her life. Not only that, she also expressed that people are not supposed to be ashamed of getting help from others and taking a therapy, because it may give a big change and healing effect to people who need it.

2. The dominant transitivity process found in the Late show with Julie

Andrews

No	Transitivity Process	Number of Data
1.	Material Process	26
2.	Mental Process	9
3.	Behavioral Process	4
4.	Verbal Process	3
5.	Relational Process	23

6.	Existensial Process	3
	Total	68

Table 8. List of number of data found

Based on the table above, it can be seen that the dominant type of transitivity process found in the Late show with Julie Andrews was Material process with 26 data, followed by Relational process with 23 data, then Mental Process with 9 data, Behavioural process with 4 data, and both Verbal and Existensial process with 3 data. Thus, the total of data found was 68 data.

As a conclusion on the findings, the researcher saw the data as correlated with the theory that has been used, because all the type of transitivity process according to Halliday (2004) Transitivity theory, was discovered. In the data, Julie Andrews deliver all the major events on her live, they are her first movie, her first book, and her divorce. Through the transitivity the experience was delivered which contain messages as well.

B. Discussion

In this section of the chapter, the researcher presented the additional explanation of data that have been displayed in the previous section, findings section. Every data found in this research was all taken from The Late show where Julie Andrews is the guest star in the show, with episode called “Julie Andrews: Therapy Saved My Life’. The data which was collected was limited based on the objective of the research, in this case, finding about the Transitivity Process in The Late show with Julie Andrews.

1. Transitivity Process in The Late show with Julie Andrews

Transitivity is a concept that depicts experience as a form of process involving people and the external environment. The choice of the sort of process and the role of the participants that are manifested into the reality of experience are connected to transitivity (Halliday, 2004). This definition is correlated with what Julie Andrews was doing with her appearance the Late Show, where she was asked by the host about her past, specifically about her experiences when producing her first movie, her first book that she wrote down, and her traumatic divorce with her husband which led to her to conduct a therapy.

The experiences that Julie Andrews explained was in accordance with Transitivity, where it was divided into six types of Transitivity process, they are Material Process, Mental Process, Relational Process, Verbal Process, Existential Process, and Behavioral Process (Halliday, 2004). From these six types of Transitivity Process, all the Processes type are found in The Late show with Julie Andrews.

Based on the finding section, in the Late show with Julie Andrews, was dominated by Transitivity process are Material Process and Relational Process, followed by Mental Process, and Existential Process Behavioral Process, and Verbal Process. The Material and Relational process are the dominated process of Julie Andrews, because both of these process are highly correlated with the act of doing and and happening based on the transitivity system itself, and since Julie Andrews explained about many of her experience as a celebrity which including a lot of doing and happening, thus it makes Material and Relational process the dominant process among the others.

a) Material Process

The material process is the act of doing or conducting something, whether physically or by genuine acts done by a person or group of individuals toward other people. This process can include one or more participants, who can take the form of an actor, a goal, a receiver, a client, or a scope. Actors and goals are common participants in this process. A goal is a participant who is impacted by a job or action, and an actor is someone who performs an action or task. In the clause, nouns, noun phrases, and pronouns represent actors and goals, while verbs or verb phrases represent the material process (Halliday, 2004).

In the findings section, it was showed that there were total of 26 data of Material Process found in Late show with Julie Andrews. In the Material Process, The Actors in the clauses were indicating Julie Andrews herself, some inanimate objects, and her friends in general. They were described as factor by using various type of noun and pronouns such as everybody, we, he, I, they, the lamps, etc. Julie Andrews used verbs such as ‘wanted’, ‘stayed’, ‘gave’; and verb phrase such as ‘shut up’ and ‘brings out. These verbs and verb phrases was defining the clause as Material Process, because they showed general words related to activities.

Furthermore, Julie Andrews described three main themes of her experiences in her narration on the show, they are the experience on her first movie production which including the process and the crew, the first book that written by her, and her therapy because that caused by her divorce. For example, In Data 1 where the actor of the clause is ‘Everybody’ which referred to the crew of the movie, the material process was indicated by the

verb 'wanted'. The goal is the phrase 'to make it' which referred to the success of creating a scene in the movie. The circumstant is a phrase 'as astringent as possible' which referred to the crew desire on the scene. The data that share the same experience are Data 1, Data 2, Data 3, Data 4, Data 5, Data 6, Data 7, Data 8, Data 9, Data 10, Data 11, Data 12, Data 13, Data 25, and Data 26.

The example of Julie Andrews's experience on her first book, specifically in Data 14. In the data, the actor of the clause is 'Who' which referred to her friend named Emma, the Material process was indicated by the verb 'helped'. The goal is the word 'me' which referred to herself as the one who was being helped. The circumstant is a phrase 'with the book' which referred to the book she wrote. The data that share the same experience are Data 14, Data, 15, Data 16, and data 24

The last example of Julie Andrews's experience on her therapy in the past, specifically Data 17. In the data, the actor of the clause is 'Who' which referred to her friend named Mike Nichols, the Material process was indicated by the verb phrase 'really tipped'. The goal is the word 'me' which referred to herself as the one who was being suggest. The circumstant is a phrase 'into wanting to go to therapy' which referred to herself who eventually. The data that share the same experience are Data 17, Data, 18, Data 19, Data 20, Data 21, Data 22, and Data 23.

b) Relational Process

The relational process connects, bears, characterizes, or marks "being," which indicates that anything is seen to have qualities and

identification markers. In English, there are three types of relational processes: (1) intensive, (2) possessive, and (3) circumstantial. An intense clause of this type reveals a similarity relationship between two participants, a possessive clause shows that an entity has another entity, and a circumstantial type clause shows that an entity is in a certain location, time, and manner (Halliday, 2004).

In the findings section, it was showed that there were total of 23 data Relational process found in Late show with Julie Andrews. Based on the theory, The Intensive and Possessive were found, while none of circumstantial found. There are 22 data of Intensive and only 1 data of Possessive.

The Intensive Relational Process used by Julie Andrews were: is, was, were, would, and be. These verbs were used by Julie Andrews to describe about the traits or characteristic on the entities, whether it was a human being, such as example, her friends or colleagues, and other inanimate objects, such as her mental condition, or her divorce. For example, in Data 28 of Julie Andrews's description of traits about her friend. In the Data, the actor of the clause is 'He' which referred to her friend named Mike Nichols, the Relational Intensive process was indicated by verb 'is'. The attribute is the phrase 'a great guy' which referred the characteristic of her friend. Intensive Relational Process are in Data 27 Data 28 Data 29 Data 30 Data 31 Data 32 Data 33 Data 34 Data 35 Data 36 Data 37 Data 38 Data 39 Data 40 Data 41 Data 42 Data 443 Data 44 Data 45 Data 46 Data 47 Data 48.

Meanwhile, The Possessive Relational Process used by Julie Andrews is only 'is'. For Possessive Relational Process was used to describe about her

friend who was the godmother of her daughter. The data is only existed in data 49, where Julie Andrews's description of possession of her daughter's godmother. In the table above the actor of the clause is 'She' which referred to her friend named Emma, the Relational Intensive process was indicated by verb 'is'. The attribute is the phrase 'my lovely daughter's godmother' which referred her daughter who had Emma as her godmother.

c) **Mental Process**

The meaning of ideas and feelings is encoded by the mental process. Mental processes differ from material processes in that they do not ask "to take action or action" that is actual or palpable, but are instead tied to mental reactions. Halliday (2004) divides mental processes into three categories: 1) cognition, which is concerned with the use of the brain (thinking, knowing, and understanding), 2) affection, which is concerned with feelings or the heart (liking, feeling, and hating), and 3) perception, which is concerned with the use of the senses (seeing and hearing).

The findings section showed that there are 9 data found in The Late show with Julie Andrews. From the three categories there are two categories found, Cognition in Data 51, Data 52, Data 55, Data 56, Data 57, Data 58; and Affection in Data 50, Data 53, Data 54. As an example, it can be seen in Data 51, where the Cognition Mental Process of Julie Andrews is presented. In the data, the senser of the clause is 'I' which referred to her herself, the Cognition Mental Process was indicated by the word 'thought' which referred to her opinion. The phenomenon is the phrase 'the music was lovely' which referred to the music on her movie.

While in Data 54, affectionate Mental Process of Julie Andrews is found. In the example, the sender of the clause is 'I' which referred to her herself, the affectionate Mental Process was indicated by the word 'love' which referred to her compassion. The phenomenon is the phrase 'what he did in the film' which referred to the director's treatment toward the movie.

d) Behavioral Process

Behavioral Processes share several material and mental process properties. In terms of language, the behavioral process is a mix of "feeling" (sensing) and "doing" (acting) (doing). As a result, behavioral processes have physiological and psychological manifestations. Human activity that is carried out with full awareness, such as smiling, gazing, coughing, or complaining, is the behavioral process in question. It is acknowledged that the behavioral process has an ambiguous definition since it might include two processes. (Halliday, 2004).

In the findings section, it was showed that there were total of 4 data of Behavioral process found in Late show with Julie Andrews, they are in Data 59, Data, 60, Data 61, and Data 62. As an example, Data 59 showed the Behavioral Process of Julie Andrews. In the data, the behavior of the clause is 'I' which referred to her herself, the Behavioral Process was indicated by the word 'giggle' which referred as laugh lightly in a nervous, affected, or silly manner, it means that the material process is about doing something, and the mental process is feeling amused or happiness, thus, producing the Behavioral Process. The circumstant is the phrase 'at the slightest things' which referred to things that made her giggle.

e) Verbal Process

The verbs say, talk, tell, and speak are commonly used to express verbal processes. In most cases, the verbal procedure necessitates the existence of only one argument, namely Sayer. Meanwhile, other optional arguments (secondary arguments), such as receiver and verbiage, can be presented through the verbal process. A receiver is a conversation participant who functions as the communication's recipient or to whom the conversation is addressed (Halliday, 2004).

In the findings section, it was showed that there were only 3 data found related to Verbal Process in the Late show with Julie Andrews, they are in Data 63, Data 64, and Data 65. Data 63 as an example of Verbal process of Julie Andrews. In the data, the sayer of the clause is 'Robert Weiss' which referred to the movie director who lead the production of her first movie, the Verbal Process was indicated by the word 'said'. The Verbiage is the phrase 'that I know what we'll do' which referred to what Robert Weiss said during their movie production.

f) Existential Process

The existential process denotes a person's, thing's, or other object's existence. The existence of Being characterizes the existential process (Existent). In English, an Existential type clause commonly starts with the word 'there', which serves no purpose (empty content), but instead emphasizes on the assertion of existence. As a result, one participant, existence, is bound by the existential process. This is demonstrated in English with a clause construction with the grammatical subject "there is/are/was/were."

In the findings section, it was showed that there were only 3 data found related to Existential Process in the Late show with Julie Andrews, they are in Data 66, Data 67, and Data 68. Data 66 as the example of Existential Process example of Julie Andrews. In the data the word 'There' is existed as the indicator of an existence in the clause, the Existential Process was indicated by the word 'were', the extent was the word 'sets', and the circumstant is the phrase 'we were on that' which the set that Julie Andrews and her colleagues were on. The context of the data was the existence of the set where Julie and her colleagues were in the process of the movie making.

2. The dominant Transitivity found in The Late show with Julie Andrews

From the explanation of the previous section, it can be seen that the dominant process of Transitivity process were Material and Relational process. Both of these process were dominated because of the context on Julie Andrews explanation in the Late show.

First, the Material process was dominated because based on the definition itself, where Material process is highly related with doing something. In the context of Julie Andrews explanation due to her experience, where in the early phase of the talkshow, she talked about what she did when she was acting in her first movie, which include her activity in the set of movie making. Not only that, she also mentioned about the people involved and what they did in the movie making process. These can be seen in Data 1, Data 2, Data 3, Data 4, Data 5, Data 6, Data 7, Data 8, Data 9, Data 10, Data 11, Data 12, and Data 13. In the second phase of the talkshow she also explained about her first book, which was able to

be written because of the people around her that helped her. These can be seen in Data 14, Data 15, and Data 16. Due to this reason, Material process became the dominant process.

The second is relational process, where the meaning of relational process is about describing traits, possession, and situation. In the context of Julie Andrews, where she mainly talked about her movie, she was depicting about the people involved such as the other actor, the director, and the other people involved in the movie process. She also describing the situation that happened in the movie set. These can be seen in Data 27, Data 28, Data 29, Data 30, Data 31, Data 32, Data 33, Data 34, Data 35, Data 36, Data 37, Data 38, Data 39, Data 40, and Data 41. The second thing that she talked about which make the relational process became the dominant process was her divorce. In this explanation she described about her self, and her feeling due to her divorce. These can be seen in Data 42, Data 43, Data 44, Data 45, and Data 46. Therefore, the relational process became the dominant as well, because Julie Andrews used it to describe her experience.

Morover, transitivity was widely used to explore the ideology, experience and emotion behind the speech of Julie Andrews, and to analyze the character or other elements beyond the sentence of the text In the talk show. Julie Andrews constructed the world of experience for describing the whole clause with a set of process types as its central, by utilizing the six types of transitivity process, she managed to explain her three major experience, her first movie, her first book, and her divorce. The relation between the sentence and the situation is that all her experience that she intended to talked about were delivered and covered all the

major things that she wanted to explain, and in her speech she was also managed to deliver messages to the audience. These can be seen in Data 45, where she mentioned about her friend, Mike Nichols, who made her went to therapy due to her trauma in her divorce. Julie indicated that it was the existence of someone else that helped her recover. As well as in Data 47, where Julie mentioned about there is no harm on sharing bad experience with other people. She indicated that talking about our problem with people is not something embarrassing, because based on her experience, talking to someone else was helping her.

The implication on the transitivity analysis in this research is transitivity is utilized to find out how the speaker can portray certain experience or events and bring certain issues in their speech. Even in In non-literary texts such as the speech of Julie Andrews in *The Late Show*, transitivity analyses are used to find out how language is used to influence people, by telling and describing the experience.

Furthermore, the researcher tried to compare the current research with the previous related research. compared with the previous research, this research shared some similarities and differences regarded to the findings of the research. In Kobat (2021), where she used *Surah Al-Kahf* as the object of her research, found all types of process of transitivity as well, as well as the material process as the dominant process found, the difference occurred because in his research his object is not a human being but a Qur'an.

Also in Nurhayati (2016) where she utilized *Movie Dialogues of Big Hero 6*, where she only found verbal process and mental process only, therefore compared to Nurhayati's research, this research is more prominent since this

research discovered all the process, she found all the process because she was analyzing all the character in the movie.

While in Hajar (2018), where she used *The Little Frenchman and His Water Lots* novel as her object also found all the transitivity process similar to the current research, the only difference is that the dominant process on her research is material process, because the novel which she analyzed was containing a lot more description and conversation, while this research is dominated by material and relational and was analyzing a brief conversation.

As a conclusion, from what Julie Andrews was explained in the Late Show, she was highly valuing the presence of people in her life in many different situations. The way she explained it was implying that with the help of other people, we can manage to do many things, and solving our problems. Not only that, with the help of Transitivity analysis, the researcher or other people who intended to find deeper meaning of a text or a narration, can have the experience in exploring language not only based on the mere text, but also exploring the language in process of doing, sensing, saying that happened to the context of the text or the narration itself. Therefore, all the explicit and implicit meaning or messages can be revealed.

CHAPTER V

CONCLUSION AND SUGGESTION

The conclusions and suggestions of the research are presented in this chapter. Following the end of the data collecting and analysis related to the identification of Transitivity on Julie Andrews' Late Show, the researcher provided conclusion and suggestion as the competition of the research.

A. Conclusion

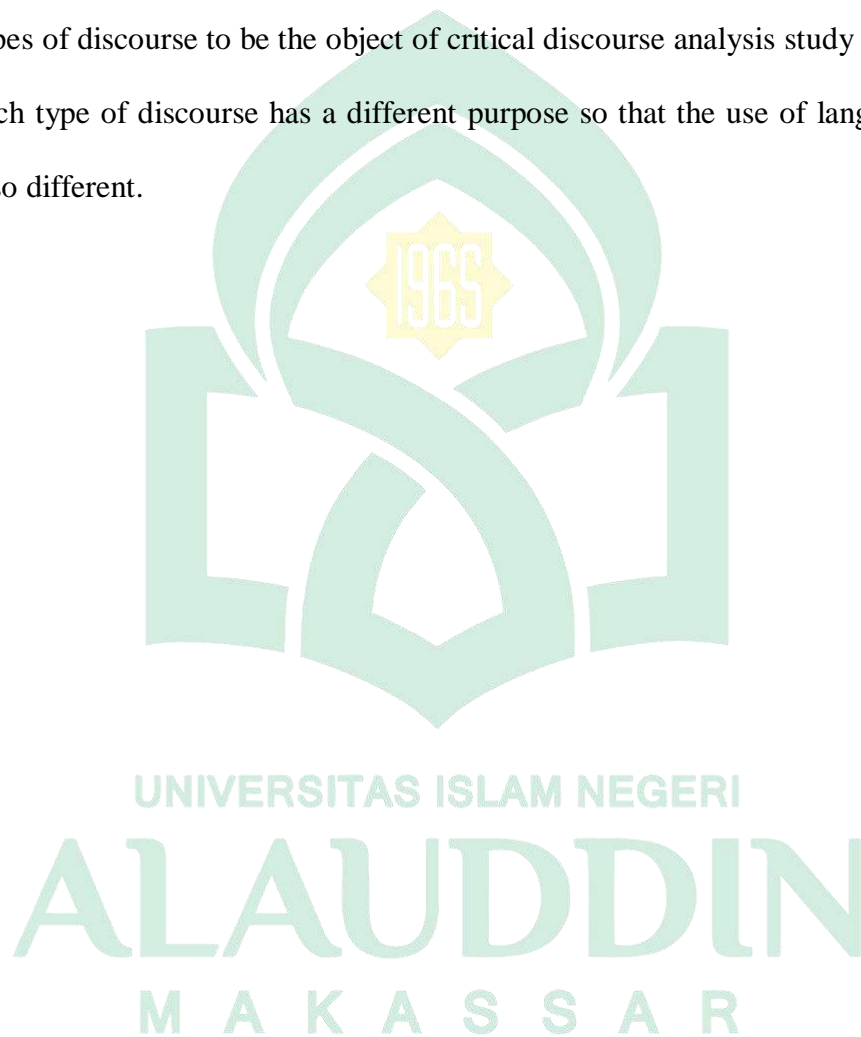

After displaying findings and discussion in the previous chapter, the researcher concluded that all the transitivity process were found in The Late Show with Julie Andrews. The most dominated Transitivity process is Material Process with 26 data, followed by Relational Process with 23 data, followed by Mental Process with 9 data, Behavioral Process with 4 data, Existential Process and Verbal Process share the same amount with each of them have 3 data. The transitivity was used by Julie Andrews where she describes a great value on the presence of others in her life in a variety of circumstances. She stated it in such a manner that it implied that with the support of others, people can do a great many things, including overcoming their difficulties.

B. Suggestions

The researcher makes various suggestions for students, as well as readers and future researchers who will do transitivity study. Readers or future researchers should be more imaginative and analytical when interpreting an object, according to the researcher. Because each type of discourse has a particular function, the researcher also hopes that readers or

future researchers may pick other forms of objects to be the subject of critical discourse analysis studies, both in the form of audiovisual and text.

Furthermore, The researcher suggests readers or future researchers to be more creative and critical in interpreting either a speech or text. The researcher also hopes that the readers or the next researcher will choose other types of discourse to be the object of critical discourse analysis study because each type of discourse has a different purpose so that the use of language is also different.

APPENDICES

Transcript of Julie Andrews explanation in The Late Show

- Stephen : Everybody welcome back. Ladies and Gentleman. I feel the same way. Ladies and gentlemen, my first guess tonight is, Ammy, Grammy and academy award winning legends whose new memoir called homework please welcome back to the late show the practically perfect Julie Andrews. Thank you so much for being here. (00.00.01 – 00.01.02)
- Julie : It is a pleasure to see you again. (00.01.04)
- Stephen : so lovely to see you, too. I've had the opportunity to speak to you several times. We've spoken backstage a couple of times, and so the fits question i wanna ask you every time i see you is, wow. I'm so excited to see you. It's more of an emotional reaction. (00.01.08 – 00.01.26)
- Julie : I feel the same way about you. (00.01.27)
- Stephen : Thank you, Julie Andrews. Now, the film that propelled you to your first fame, really, internationally, was "Mary Poppins". (00.01.38 – 00.01.45)
- Julie : First film I ever made. (00.01.46)
- Stephen : you received an Oscar for that, right? (00.01.47)
- Julie : yes (00.01.49)
- Stephen : Extraordinary. But the "sound of music" really cemented your legacy that following Mary Poppins, you weren't in original Broadway cast. (00.01.52 – 00.02.00)
- Julie : not the stage production. (00.02.02)
- Stephen : not the stage production, yes. Had you seen the Broadway Production? (00.02.05 - 00.02.05)
- Julie : yes I had, the music was lovely. I felt like it was maybe, could have been saccharin at that time. (00.02.12 - 00.02.16)
- Stephen : A little too sweet for you? (00.02.20)
- Julie : well, you know, seven children and the alps, supposedly, beautiful music, gorgeous music. (00.02.22 - 00.02.27)
- Stephen : Sure, helicopter shots? (00.02.31)
- Julie : well, that's in the film. Yes, a lot of helicopter shots. But, I thought it could have been with the real stuff outside. The real Salzburg was very oversweet. But everybody on the film wanted to make it as astringent as possible, including lovely Chris Plumber and our wonderful director Robert Weiss. (00.02.32 - 00.02.49)
- Stephen : when you say astringent, you mean like take some of the sweetness out of it? (00.02.55 – 00.02.57)
- Julie : yes, take some of the saccharin out of it, and just try to make it kind of as real as possible and not too sugary really. (00.02.57 - 00.03.01)
- Stephen : right, because there are Nazis in it, and that's a dash of vinegar. (00.03.07 - 00.03.12)

- Julie : well, yes indeed there were sets we were on that, when you think about what they used to be and who used to be there. It wasn't pleasant. (00.03.15 - 00.03.23)
- Stephen : Cristopher Plumber, he's a very intimidating captain, captain Von Trapp in that. Was he serious or light hearted off camera? (00.03.26 - 00.03.34)
- Julie : Mostly light hearted, he's a great guy and a tremendous friend. we've stayed friends over the years. (00.03.36 - 00.03.41)
- Stephen : That's nice. (00.03.42)
- Julie : Love seeing each other. He was the glue that held the whole thing together. He gave it that strength. was very kind to work with. I love what he did in the film. (00.03.43 - 00.03.55)
- Stephen : can you tell me, this is one to have the most somewhere in my youth or childhood, this was one of the most famous scene in the movie, the two of you in the gazebo. Can you tell me about shooting this? (00.03.56 - 00.04.11)
- Julie : you know the story. (00.04.12)
- Stephen : it's show business, Julie, of course I know the story. (00.04.13)
- Julie : I late to give away such a beautiful, wonderful scene. but they lit that scene because it was a gazebo. they lit it with huge klieg lights, which are very strong. (00.04.14 - 00.04.27)
- Stephen : so it wasn't always a silhouette. (00.04.29)
- Julie : no, not at all. Patience dear lad, patience. (00.04.31)
- Stephen : this is what's called setting you up. (00.04.37)
- Julie : Anyway, eventually the lamps were tipped down to give a shafts of moonlight, and what happened was the carbons rubbing in the lamps began to grown and moan, and it seemed like a terrible comment on our acting. And you know, when Chris was saying, oh Mariela, I Love you, it groans, And other extremely rude noises. Well, after a while. they put new carbons, it still it did it. Finally, it got so bad, I could see Chris's eyes creasing a little. I giggle at the slightest things anyway. And Bob Weiss realized we were impossible, closed the set we went to lunch. I prayed I wouldn't giggle anymore, because It's very hard to be nose to nose doing a love scene, and having these awful sounds coming at you. (00.04.42 - 00.05.37)
- Stephen : so, somewhere in my youth and child. (00.05.40)
- Julie : That's exactly right, and the dialogue. We had lunch and comeback, started it up all over again. Robert Weiss said that I know what we'll do. I want you just walk into the silhouette, I'll shoot it at the door. wonderful shot, which was great serendipity. he said you can laugh all you like it won't show. we shut up. it was just fine. it's a story I remember very well. (00.05.42 - 00.06.09)
- Stephen : one of my other favorite people in the world is your dear friend Carol Burnet. (00.06.15)
- Julie : she's such a chum (00.06.17)
- Stephen : and you are absolutely wonderful, I had a mire a pro, too. You did three specials together, I understand, and when you're together. (00.06.19 - 00.06.29)

- Julie : she's my lovely daughter's godmother, the one who helped me with the book. (00.06.30 - 00.06.34)
- Stephen : this book. (00.06.36)
- Julie : Yes, that one, and there's one before that. (00.06.39)
- Stephen : Homework. Home was one before this. (00.06.41)
- Julie : there was one called "home", Emma helped me with tremendously with this one, too. (00.06.44 -)
- Stephen : who is more mischievous, you or her? (00.06.54)
- Julie : I have to say, she brings out the worst in me. I get to be pretty raunchy and wicked. I think she gets shocked sometimes. (00.06.57 - 00.07.05)
- Stephen : What are some of the things you say? (00.07.07)
- Julie : I can't possibly repeat all of them. (00.07.09)
- Stephen : can you repeat any of them? It is CBS I'm not sure. (00.07.12)
- Julie : can we move right along? (00.07.20)
- Stephen : as you said, you have the new book, "Home Work", and in it you're actually pretty open about the role that therapy has played in your life. When did you first start going to therapy? (00.07.23 - 00.07.35)
- Julie : Sadly, I separated from my lovely first husband, and separations were always inevitable, the marriage was over. my head was so full of clutter and garbage. I Thought, believe it or not, it was mike Nichols who really tipped me into wanting to go to therapy. Because he had been, i don't think he'd mind me saying that now. he was so sane, funny, and clear. He had clarity I admired so much, I wanted that for myself I didn't feel I'd had it. so I went and got into it and it saved my life. (00.07.37 - 00.08.17)
- Stephen : why did you want to share that? Why was that important for you? (00.08.22 - 00.08.24)
- Julie : well, the truth is, why not? it helps anybody else, Have the same idea, there's no harm in sharing it. I think everybody knows the great work it can do anybody that is lucky enough to have it, afford it take advantage of it i think that it would be wonderful. (00.08.26 - 00.08.53)
- Stephen : well, Julie thank you so much for being here. Always, wow, a pleasure. (00.08.53 - 00.08.57)
