ACKNOWLEDGMENTS

Bismillahirrahmanirrahim

Alhamdulillah Rabbil Alamin, First of all the researcher would like to express his humble gratitude to almighty Allah SWT, Lord of the world, who has mercy, blessing, and opportunity given to me to finish this thesis under the title “Exploiting YouTube as authentic material in improving students listening skill at the first grade of SMAN 14 Sinjai” can be finished. Salam and Shalawat are addressed to the prophet Muhammad SAW who has brought us from the darkness to the lightness.

During the writing of this thesis, the researcher received much advice, guidance, encouragements and comments from a number of people. They are as motivator while finishing this thesis. The researcher can get success because they are. Therefore, the researcher would like to express deep gratitude and big thanks to them, they are :

1. **Andi Baso AG** and **A.Juliana** the researcher beloved parents who always guide and give both material and spiritual contribution until the researcher completing this thesis.
2. **Prof. Dr. Hamdan Juhannis, M.A., Ph.D.** as the rector of Alauddin Islamic University of Makassar and all his vices.
3. **Dr. H. A. Marjuni, S.Ag., M.Pd.I.** as the Dean of Tarbiyah and Teaching Training Faculty of Alauddin State Islamic University of Makassar and all his vices.

4. **Prof. Dra. Hj. St. Asizah, M.Ed.St., Ph.D.** and **Dr. Sitti Nurpahmi, S.Pd., M.Pd.** as the Head and Secretary of English Education Department of Faculty of Tarbiyah and Teacher Training of UIN Alauddin Makassar.
5. **Dr. H. Abd. Muis Said, M.Ed., TESOL.** as the first consultant, and **Muhammad Syahrudin Nawir, S.Pd., M.Hum.** as the second consultant who patiently assisted in the completion of this thesis.
6. **Dr. Serliah Nur, M.Hum., M.Ed.** as the first examiner and **Multazam Abubakar., M.Hum.** as the second examiner for their corrections and advice so the researcher completed her thesis.
7. Sincerely thanks to all the **lectures**, and the **staffs** of English Education Department for their help, guidance and assistance during the years of the researcher's study.
8. **H. Muhammad Aris**, as Headmaster of SMAN 14 Sinjai, **Agustina, S.Pd.** as the English teacher who have given permission and are willing to help the researcher during the research process.
9. Special thanks to the **First Grade students X1 and X2** of SMAN 14 Sinjai as the sample of this research and for their cooperation to the researcher.
10. Special huge thanks to the researcher's best friend **Haryuni, Nurhasna Basri, Sri Wahyuni, Nurul Husnul Awaliyah, Hijrana, and Arini Maya Seruni** for their time and for their craziest jokes so the researcher still enjoy the time in doing her thesis.
11. Special thank to **L18ERTY**, especially all of my classmate in **PBI B 2018** who could mentioned one by one. Thank you for the togetherness since 2018.

12. All of the member of New Generation Club (NGC) and English Youth Community (E-YOUC).

Finally, I hope that those who help researchers can provide benefits for everyone who reads it and hopefully this thesis will be useful for everyone, especially for researchers. May all efforts be given by Allah SWT.

Title : *Exploiting YouTube English Course in Improving The Students Listening Skill at The First Grade of SMAN 14 Sinjai*
Consultant I : Dr. H. Abdul Muis Said, M.Ed.TESOL.
Consultant II : Muhammad Syahrudin Nawir, S.Pd., M.Hum

This research aims to find out the effectiveness of using YouTube in improving the students listening skills. This research applied quasi experimental design. This research was conducted at SMAN 14 Sinjai. In this research the sample was 50 students. There were 25 students in X 1 as experimental class and 25 students in X 2 as controlled class.

The research findings showed that the first grade of SMAN 14 Sinjai got mean score of the pre-test was 61,08 and the post-test score was 80,00. Based on the results of the independent sample t-test, the significant value (2-tailed) 0.00 was less than 0.05 when equal variances were assumed.

The result of the findings showed that alternative hypothesis meaning that there was a significant effect of applying YouTube video in improving listening skill was accepted.

This study has shown that YouTube videos have positive effects on learners of English as a Second Language, such as enhancing students' confidence and enjoyment of the learning process, making it more interesting for them to learn.

CHAPTER 1

INTRODUCTION

A. Background

Listening is an important skill in language learning and it cannot be underestimated, especially in an academic context and separated in language. Listening has an essential role in language teaching, including teaching English. Guntur Tarigan in (Rajagukgu & Sirait, 2019) stated that listening is a process of listening to verbal symbols with full attention, understanding, appreciation, and interpretation to obtain information, capture the content or message and understand the meaning of communication that has been conveyed by the speaker through speech or oral language.

Listening is part of an activity of hearing or listening to spoken words. During its process, both speaker and listener are engaged in the communication directly. To build such good communication, the listeners are not only listening but also intend to grab the meaning. In this case, listeners' understanding is measured based on how well they understand what the speaker says. As it requires the listeners to actively understand every single word, listening posits an active process. Indeed it shows that there is participation which involves the listener actively listening to the speaker. The process of communication involves the speaker and listener where the speakers intend to convey what they think meanwhile the listener are intentionally and actively listen to grab the meaning of the utterance (Lestari, 2019).

In Islam, humans have been given the ability to hear and see so they are guided to be grateful, Allah said in Qur'an:

وَاللَّهُ أَخْرَجَكُمْ مِنْ بُطُونِ أُمَّهَاتِكُمْ لَا تَعْلَمُونَ شَيْئًا وَجَعَلَ لَكُمُ السَّمْعَ وَالْأَبْصَارَ وَالْأَفْئِدَةَ ۚ لَعَلَّكُمْ تَشْكُرُونَ

Translate:

“Allah brought us out of our mothers’ wombs devoid of all knowledge, and gave us ears and eyes and hearts, so that we may give thanks.” (Q.S An-Nahl:78)

This verse according to Tafsir Al Maraghi contains an explanation that after Allah gave birth to us from our mother, then He made us able to know everything that we did not know before. He has given us the following types of gifts:

1. Intellect; as a tool to understand something, especially with that mind us can distinguish between good and bad, between right and wrong.
2. Hearing; as a tool for listening to sound, especially with hearing that we can understand the conversation between you.
3. Vision; as a tool to see everything, especially with that vision we can get to know one another among us.
4. Other living devices; so we can find a way to find our fortune and other materials we need, even we can also choose what is best for us and leave what is worse.

The Purpose of this verse is for Allah, to teach us what we never know before when we were born without knowing anything. Allah gives us heart and intelligence to help us differentiate between good and bad things. Allah

opened our eyes to see what we had never seen before, Allah gives us ears to hear voices so we understand the conversation.

In the EFL context, the use of social media provides some opportunities to develop student's English language skills. It is a fact that English is one of the languages that are mostly used in social media because English is known as an international language that is used all over the world to communicate with each other. English in Indonesia is used by people especially the students as a foreign language, where the students will get English and learn English in just certain places like schools, courses, or universities as one of the available subjects in that places (Ayuningtyas, 2018). English Learners use their mobile phones in which social media to communicate with each other and they believe that mobile learning can facilitate them to learn anywhere and anytime. They have a positive perception of ICT usage for English language learning (Lizamuddin, Asib, & Ngadiso, 2019).

There are many applications, there is one application that is interesting to be an important part of education. The application is called Youtube. Youtube is a popular video-sharing platform founded in February 2005 by three former PayPal employees: Chad Hurley, Steve Chen, and Jawed Karim. Users can load, watch and share video clips for free. Generally, the videos on Youtube are music clips, movies, TV, and videos made by the users themselves. Youtube is a very informative application, through Youtube we can get references for everything including teaching materials. The video that we need as visualization material can be searched in this application. For this reason,

researchers try to develop a research idea regarding the use of YouTube if the existing content can be used as a learning resource. The YouTube application has many concrete videos that can be used as material for English lessons, such as videos on expressions of giving, asking, refusing services and others as an audio-visual form of learning English. This will be very helpful for students because students will be stimulated to find out first hand how the actual events regarding the English language materials in the book (Chien et al., 2020).

Based on the previous interview with the English teacher of SMAN 14 Sinjai especially in the first-grade class, the teacher stated that the students from the class are not good at listening. The students feel hard to understand what the speaker is saying, it is because they are not familiar with the sound and are still lack English vocabulary.

Based on the explanation above, the researcher is interested in conducting experimental research entitled “ *Exploiting YouTube English Course in Improving the Student’s Listening Skills at the First Grade of SMAN 14 Sinjai*”.

B. Problem statement

Based on the background above, the researcher would like to formulate the research question as follow :

1. Can YouTube improve the listening skills of first-grade students of SMAN 14 Sinjai?

2. Is there any significant difference between two classes by using YouTube or not to improve listening skills for first-grade students of SMAN 14 Sinjai?

C. Objective of Research

Based on the research problem above the researcher aims to know :

1. To find out if YouTube can increase students listening skills in the first-grade students of SMAN 14 Sinjai.
2. To find out is there a significant difference between two classes by using YouTube or not to improve listening skills for the first-grade students of SMAN 14 Sinjai.

D. Research Significance

The study is expected to have both academic and practical contributions.

1. For the teacher, academically, to help the teachers find out alternative media for teaching listening through media YouTube can improve the learning process.
2. For students, the researcher expects that the research facilitates the students to improve their listening skills by using YouTube.
3. For the researcher, practically, the finding of this research is useful to readers who want to increase the students listening skills.

E. Research Scope

This research focuses on exploiting YouTube to improve students' listening skills. Using YouTube videos to develop students listening skills and provide them with authentic situations to gain a better understanding of their

lessons. Video about traveling, hotel reservation, at the airport, and on the plane are the types of videos used in this study. The researcher took videos from English Speaking Course Youtube channel. The participants selected from the first-grade students of SMAN 14 Sinjai.

F. Operational Definition of Terms

1. Listening Skill

Listening skill is the skill of understanding the meaning behind the spoken language. When people listen, they identify the sound or the utterances of what the speaker says, and they use their prior knowledge to make complete sense of what they are hearing, when finally their understanding takes form from the process of listening.

2. YouTube

It is a video sharing website that allows users from over the world to watch videos posted by other users and upload videos of their own. It includes several kinds of videos such as educational, entertainment, political, historical, medical, and personal videos.

3. English Course

An english course is one of strategies in teaching learning process to help the students get a good achievement in english especially but in this research English course is one of the YouTube channel that created with the aim to bring us the most interesting videos to help us learn English.

CHAPTER II

LITERATURE REVIEW

A. Previous Related Research Findings

The first previews findings entitled “Designing English Listening Materials Through YouTube Video Editing : Training for English teachers of Islamic Junior High School, Pare-pare, South Sulawesi. The aims of this study is to help English teachers in designing English listening materials in form of audio and textbook through YouTube video editing. This study used mix method to describe materials, process, and effectiveness of YouTube video editing training. Qualitative method was used to describe training materials, training activity, products’ use, products’ quality, products’ revision, teachers’ ability, and students’ learning attitude. Quantitative data was used to describe students’ learning outcome and to support qualitative data of teachers’ ability in designing products. This study was conducted in 10 Islamic Junior High Schools in Pare-pare, South Sulawesi, Indonesia which consist of 1 State Islamic Junior High School, 7 Private Islamic Junior High Schools, and 2 Islamic Boarding Schools. The subject of the research was 18 English teachers that consist of 14 female and 4 male; and 150 students of the first grade. The result in this study is YouTube editing video training is considered effective to improve teachers’ ability in designing English listening materials. Most teachers are categorized into good in designing listening materials by editing YouTube video. Teachers can design the materials independently

where data showed that most teachers don't need long time and assistance from trainee to download, import, cut, merge, and export video (Fakhruddin et al., 2020).

The second previews findings entitled "The Effect of YouTube Video on Students' Listening Comprehension Performance". This study aimed to find out the effect of applying YouTube videos on the students' listening comprehension performance. In this study the researcher applied quasi-experimental with non-equivalent control group design. The population in this study was 90 students. Regarding the total number of population, the researcher took two classes as the samples, experimental and control group. The result of the finding showed that alternative hypothesis meaning that there was a significant effect of applying YouTube videos on students' listening comprehension performance was accepted. This finding was established by statistical computation score showing that t-test was higher than t-table ($1.834 > 0.073$). During the treatment, the application of YouTube videos made the students feel easier and fun to learn listening comprehension in the classroom (Qomariyah et al., 2021).

The third previews finding entitled "The Use of YouTube as a Learning Tool in Teaching Listening Skill". The aims of this research are to give knowledgeably and clear explanations about teaching students' listening skills through English video. The research is using a qualitative descriptive approach to give a clear explanation about the research process

without any interpretative data depth. The result of this study is learning by using video in teaching listening gives a significant effect to make the students effortless to understand the content or the occasion about the material that students learn. Teachers cannot leave YouTube outside the educational process as it offers all the advantages of having more valuable and sensational teaching experience (Hussaeni et al., 2020).

The fourth previews finding entitled “Senior High Students Perspectives on The Use of YouTube in Teaching Narrative Listening”. The aims of this study are to know Senior High School students’ perceptions on the use of YouTube in teaching narrative listening and to find out the advantages and disadvantages of YouTube in teaching narrative listening for Senior High School students. Data used in this research is qualitative. Qualitative research has a purpose to understand something that is common from the social reality of perspective participants. The results of this research are as follows: 1) The tenth grade students' perspectives on the use of YouTube in teaching narrative listening was very positive and good; 2) The advantages are a) more interesting, b) students become more focused and happier, c) learning process becomes more fun, d) the students can understand more quickly. The disadvantages are a) the videos are not all suitable, b) it takes time for preparation, c) limited data quota for downloading YouTube videos (Rahayu, 2020).

The similarity of the research is that the research use YouTube as a media to increase listening skills and the difference of the research the researcher took a video from one of the YouTube channels, namely speaking English course to improve listening skills in the first grade of SMAN 14 Sinjai.

B. Some Pertinent Ideas

Listening is a complex active mental process that involves perception, attention, cognition, and memory. During the process of listening comprehension, various factors might affect learners listening ability. It was the way to find out the students' difficulties. Hence, some pertinent ideas related to the research are as follows:

a. Listening Skill

1) The Definition of Listening

According to Rost in (Rara Saraswaty, 2018), listening helps us to understand the world around us and is one of the necessary elements in creating successful communication. Thomlison's in (Rara Saraswaty, 2018) listening is the ability to identify and understand what others are saying. This process involves understanding a speaker's accent or pronunciation, the speaker's grammar and vocabulary, and comprehension of meaning. An able listener is capable of doing these four things simultaneously. It's a medium through which children, young people and adults gain a large portion of their education, information, understanding of the world and human affairs, ideals, sense of values, and appreciation. Considering the importance of listening

skills in the language classroom, English learners should work hard to improve their listening ability. Listening as a basic input material is very important for the students in learning English. Listening is thus fundamental to speaking. It is a process that consists of four stages: sensing and attending, understanding and interpreting, remembering, and responding. The stages occur in sequence but we are generally unaware of them. Furthermore, Saha (2008) expresses that even though listening and hearing are related, listening involves an active process, which requires an analysis of sounds, in contrast to hearing that only passively perceives sounds. The analysis of sound usually makes the students find some difficulties focusing their attention on the listening material which is being listened to. So, teachers' creativities are needed to stimulate and encourage students to enjoy learning and the teacher should deliver interesting to conduct listening activities interesting, fun and communicative.

2) The Types of Listening

Based on the explanation before listening occurs under the consciousness of the listener and it happens because of some purpose of the listener. In harmony with this, listening can be separated into two types of listening, which are interactional listening and transactional listening. Interactional listening can be referred to the two-way listening, it is often socially oriented and mostly it happens to fulfil the listener's" social needs. Interactional listening also involves the interaction between the listeners and the speakers. An example of this type of listening often can be found in family gatherings,

small talk, or a casual conversation at a party. On the other hand, transactional listening can be referred to the one-way listening. The use of this type of listening is primarily to deliver or communicate information which in this situation the listeners cannot confirm nor clarify the information that the speaker informed. This type of listening is often found in seminars, stadium general, and news broadcasts.

Obviously, for listeners knowing the various types of listening can be useful. The listeners can decide what to listen to other than trying to understand every single spoken word. In other words, listeners can decide which point they have to pay more attention to, it depends on their purposes of listening. As we know, listening has many purposes, so it also produces many kinds of listening as well. Professor Owen Hargie splits listening into six types, which are discriminative, comprehension, evaluative, appreciative, dialogic, and emphatic listening.

Discriminative listening can be referred to as the basic form of listening which the purpose of it is simply to scan and monitor the visual and auditory input. Comprehensive listening refers to the goal of listening to itself which is to comprehend the listening input and understand the message or the information that has been given by the speakers. Evaluative listening is the type of listening that enables the listener to make the appropriate judgement of the speaker's message by evaluating the accuracy, meaningfulness, and utility of the speaker's message. Appreciative listening can be referred to as listening for gaining pleasure or appreciating the input. One the example of

this type of listening is listening to music that makes the listener feels enjoy and appeals to the listener.

Dialogic listening is two-way listening that generates benefits for both speaker and listener as they share views or ideas with one another to decide that both sides would agree. The last is emphatic listening, which is the type of listening to that can be difficult to perform because the listener needs to understand and experience what the speaker feels and thinks. One of example of this type of listening is commonly found among close friends, when one of them needs someone to talk to or needs someone to listen to them with hopes that the listener will make them more comfortable and feeling cared for. This type of listening appears to be difficult because not everybody can be a good listener, it is far easier to tell our own story or give advice to someone rather than empathize with others.

While Hargie splits listening into six types, Jeremy Harmer just splits listening into extensive and intensive listening. Extensive listening is just like extensive reading with the simple purpose to create a better reader, advancing their vocabulary and also grammar. Extensive listening, it also can have the same effect in students' language development. In extensive listening, teacher give the students liberty to choose the material of their extensive listening so they could do it for pleasure and it also does not have to happen in the classroom only but also outside classroom such as their own home, or while they are traveling somewhere. The materials are vary, it can be movies, songs, audio books and etc., which can be easily get from the internet. The

point is that the contents should be appropriate and meet the students' needs so that this type of listening will work effectively.

In addition, the students are encouraged to accomplish some certain tasks during extensive listening. For example, recording their review towards the materials they listen to. Then, writing comments or reports, summarizing, and criticizing the materials. These tasks would help the teacher to assess their progress. In performing their tasks, the students may discuss the system and the techniques with their teacher. Or, the teacher provides options whether the students work in individuals, groups, or pairs.

Intensive listening is where the students and the teacher have live interactions and practice listening strategies. Sharing topics and responses are included in this type of listening. The forms of intensive listening can vary, such as story-telling, reading aloud, interviews, or conversations. The main purpose of intensive listening is not only to build and enhance the students' listening skills but also to build students' confidence and belief. Because of that, the teacher is highly demanded to be the feedback organizer, machine operator and also the prompter. Some media such as movies, songs and videos can be used to support this type of listening. The students can watch the media as much as they want because the main focus is for the students have to recognize and be aware of what they hear and listen to so they will get user inputs from the materials they listen to.

Furthermore, these two types of listening can be combined, whether the material or the procedures. Because both types provide input not only from

the teacher but also the other sources which will provoke students good speaking habit from the English spoken input that they listen which will help them improve their pronunciation and speaking skill.

3) The teaching of Listening

The teaching of listening is assumed not a skill that requires much attention to teach because listening is not important as speaking. This assumption appears to the surface because it is believed listening will develop naturally with speaking. Nowadays, this assumption meets an end after listening gets more attention and also it believes one of the skills that needs to be taught more often, actively, and effectively in the language classroom. Recently, some many methods and approaches have been developed and examined to develop the students' listening skills. Some of the methods and approaches are direct-method, audio-lingual, discrete item, communicative, task-based, and integrated approaches.

The integrated approach is more likely to get many attention of the linguist and language teacher rather than other methods. The teaching methods and techniques which modified with technology integration has been one of the most useable and favourable techniques for the most language teacher. This development in teaching and learning strategies or techniques is one of evidence that many language teachers are capable of managing the learning process for heterogeneous learners which in this era technology is the part of their life that is impossible to be set apart. Technology in multimedia allows the teacher to play an active and dominant role in and from a higher level. The

use of technology in multimedia also “cultivates students” interest in the study, promotes students” communication capacity, improves the interaction between teacher and students, creates a context for language teaching, and provides flexibility to course content.”

Since listening uses spoken materials, Richard is considered teaching listening based on two types of spoken speeches which are bottom-up and top-down. In many traditional classrooms, listening exercises are mainly focused on bottom-up processing. Some of the activities are cloze listening, dictation, the use of multiple-choice questions after a text, or other similar activities which demand detailed recognition, and processing of the input. Traditional classrooms believe that input contains everything needed by the listener to understand. Meanwhile the teaching of top-down listening offer activities that require more listeners active participation and also their background knowledge. There are some examples of these methods. The first example, students are asked to listen to part of a story. Then, they have to complete and compare the story endings. The second example, the teacher asks the students to read news headlines then guess what happened. After that, students will be asked to listen to the full news items and make a comparison. The last example, Students read one speakers part in a conversation, predict the other speakers part, then listen and compare.

b. Using YouTube to teach Listening

Using YouTube as a teaching tool has many advantages. Because it is a free teaching resource, it saves the teaching budget. In addition, making teaching

a continuous process, because students can learn inside and outside their classrooms. It also helps learners to expose to authentic native speaker' settings, which helps them to gain a deeper understanding of foreign language culture, at the same time learners' listening comprehension will be improved.

YouTube is a form of entertainment that enact a story by sound and a sequence of images giving the illusion of continuous movement. YouTube is one of media in teaching language. It is very useful because it can make students more interseted in studying. Sometimes, the students feel bored of the situation in english class, so the students need an entertainment and YouTube is one of the suitable media in modern era.

YouTube is the biggest and populer site of online vidio in the world especially internet. Currently YouTube users spread across the world of all ages, from children to the level of adults. The users can upload video, search, watch video, and discuss about videos and also share video clips for free. Every day here are millions of people who acces it. So YouTube is potential to be used as medium of leraning English. Objectives utilizing YouTube as a medium of learning English is to create the conditions and the learning environment interesting, fun, and interactive. Instructional videos on YouTube can be used as an interactive learning in the classroom and for students themselves through online presentation or offline. Usage of YouTube as a medium of learning English can be used at any time without being limited if space and time with the computer or media prsentation requirements connected with the internet.

Therefore, students are expected to maximize YouTube as learning as much as possible.

Many students watch YouTube videos but unfortunately few of them consider it as an opportunity to develop their listening skills. If teachers can implement YouTube properly in the classroom, it will make the English language learning more innovative and less traditional. According to Duffy in (Alqahtani, 2014) YouTube is increasingly being used by educators as a pedagogic resource for everything from newsworthy events from around the world to “slice-of-life” videos used to teach students within an ESL (English as a Second Language) course”.

Teaching listening by using YouTube make learning become more interesting and students become motivated. However, it is rarely to find the study which focus on students’ listening comprehension after being taught by using YouTube videos (Shafwati et al., 2021).

Even though the YouTube website is very easy to use and has an open policy but sometimes the content might be unsuitable or too long to be displayed in the classroom.

According to Suzan Karkera and Chamundeshawari, there are many advantages of using YouTube to teach English:

- 1) YouTube is very instrumental in teaching English it is not space-bound. It can be used both inside and outside of a classroom.
- 2) It gives students exposure to authentic materials like native speakers’ conversations in real-life situations. For ex. Interviews and documentaries.

- 3) Students not only learn the language but also learn more about the culture, habits, and lifestyle of people around the world. For ex. Vlogger Channels. This allows students to learn on their own.
- 4) Students can watch the videos and determine which pronunciation and conversation skills need to be acquired and work on them.
- 5) It is a great conversation starter. Students can ask what they have viewed and express their views and opinions. This gives them an opportunity to have meaningful peer discussions.
- 6) Further activities can be conducted after viewing the videos. Students can be divided into groups and asked to express their opinions on the video. The students can be given writing tasks based on the content or the language derived from the video.
- 7) YouTube is not only a channel for viewing but also a channel that allows the public to upload their videos. This feature allows the student to make their own videos and upload thereby integrating language and creative skills.
- 8) YouTube also being a search engine allows students to find many videos on the same topic giving them some dimension from the main theme. This connects them with external experts around the world.
- 9) The comment section below every video is another interactive feature of YouTube. The students can watch the videos and leave their comments which are read by other viewers around the world. This lays a platform for

further discussions on the same topic and also gives an opportunity for the students to express their opinions.

- 10) Teachers can also upload videos on YouTube for students. This provides an opportunity for teachers to keep students engaged even outside of the classroom. Teachers can upload videos that are relevant to student's needs for learning.
- 11) YouTube video-text is one of the biggest benefits for beginners. The students can follow through as they watch the videos. This improves their listening comprehension.
- 12) Audio supported by video motivates students to pay attention and listen.
- 13) YouTube videos are free of charge so they are easily accessible to students. Apart from that, YouTube's newest feature is the ability to download videos and then watch them later offline. This feature allows students to download videos and listen to them multiple times whenever needed without being connected to the internet.

C. Theoretical Framework

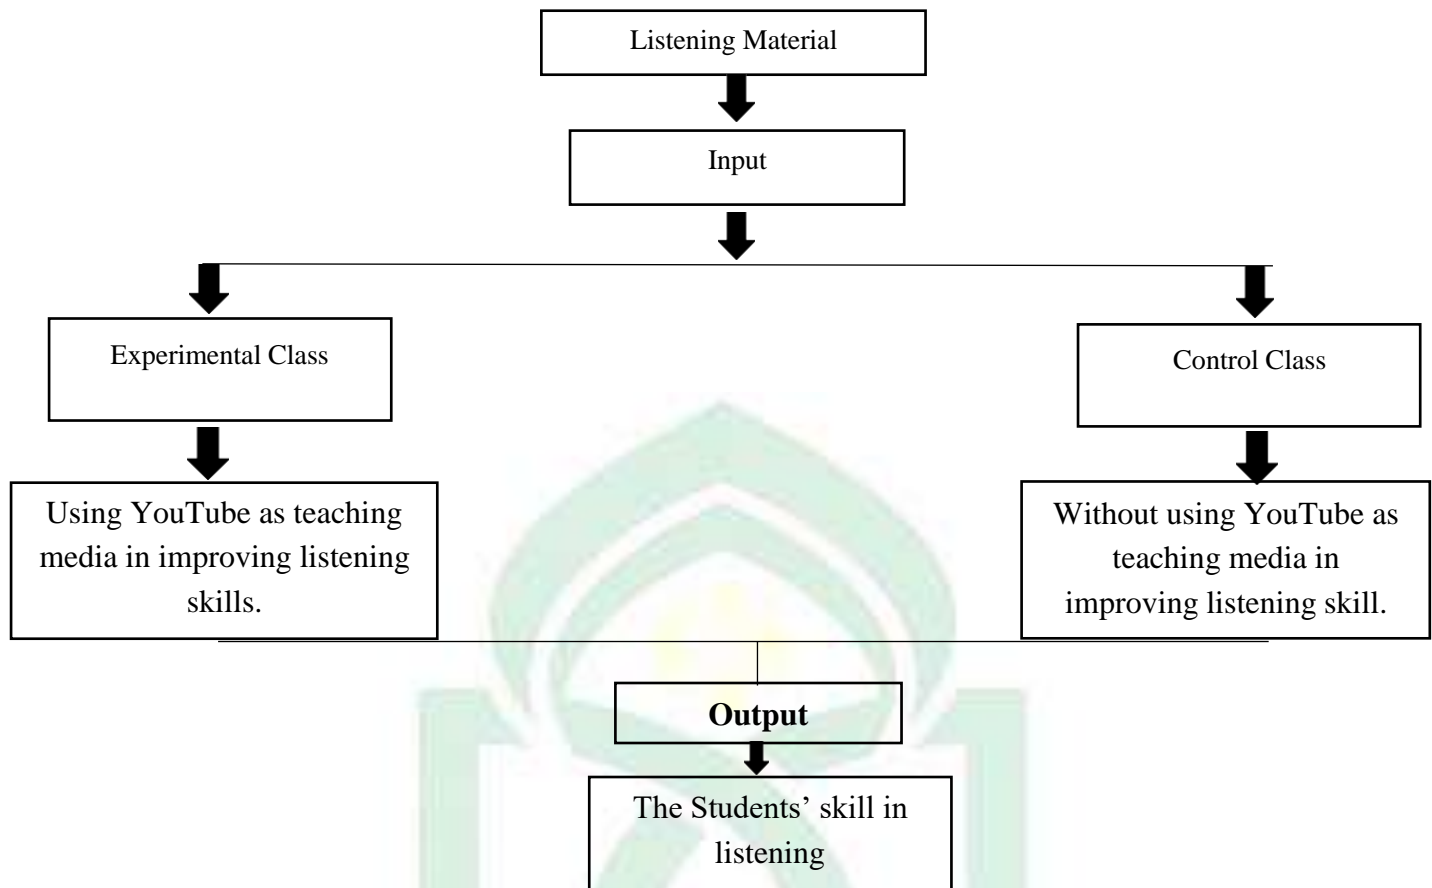

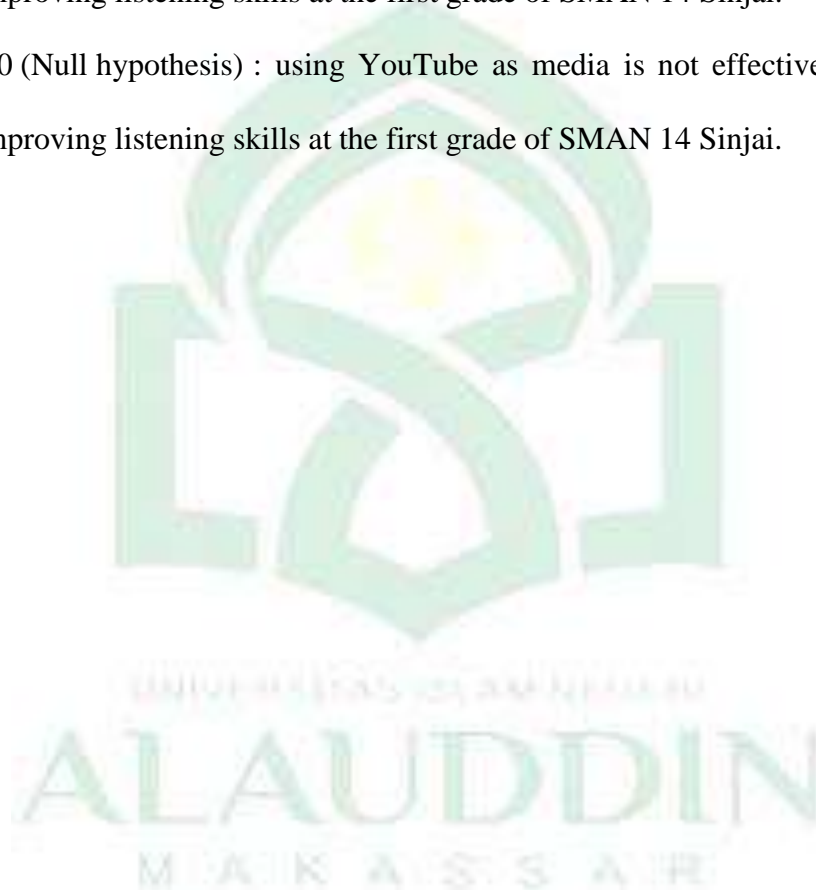

Figure 1. Theoretical Framework

According to Hanson-Smith in (Ekawati et al., 2022) , there are many benefits of using videos as in class learning resources. Using videos in listening brings many benefit to learners because they can enjoy language learning through videos, and learners gain confidence when they watch and listen to videos. The use media in the process of listening will be helpful in determining the product of listening. During the process of listening, the students should be stimulated and motivated by the use of appropriate media. The use of YouTube video in student's listening activity is helpful to stimulate and motivate them.

The researcher then used YouTube in the experimental class to improve the students' listening skills. While in the control class, without using YouTube videos. The process output in this section will be an improvement in the students listening skill..

D. Hypothesis

1. H1 (alternative hypothesis) : using YouTube as media is effective in improving listening skills at the first grade of SMAN 14 Sinjai.
2. H0 (Null hypothesis) : using YouTube as media is not effective in improving listening skills at the first grade of SMAN 14 Sinjai.

CHAPTER III

RESEARCH METHOD

A. Research Design

The research design of this study was a quasi-experimental, using a comparison or control group to investigate the research questions which aims to know whether video YouTube was effective for students listening skills.

Table 3.2 The Experimental Design

Group	Pre-test	Treatment	Post-test
Experimental	O1	X1	O2
Control	O1	X2	O2

Where :

O1 : Pre-test

X1 : Treatment of Experimental Group

X2 : Treatment of Control Group

O2 : Post-test

(Gay,2006:259)

Based on the table above, the researcher took two classes, the experiment class and the control class. Before giving treatment, the researcher gave a pre-test to both classes. Then the researcher taught the students in experimental class by using video YouTube and in controlled class without using video YouTube. After several meetings, the researcher gave the post-test to both classes. It is

given to know the effectiveness of video YouTube towards students listening skills.

B. Population and Sample

According to (Schreiber & Asber-self, 2011), the population in social science research refers to all of our potential participants; think of it as the whole group of people in which you are interested. The researcher took the first-grade student of SMAN 14 Sinjai which consist of 4 classes and each class consisted of 25 students as the population of the study. The total population in this study was 100 students.

Schreiber & Asber-self (2011), the sample of participants for your study is part of the population, and all possess some characteristics or characteristics that make them members of the sample group.

The Researcher was used purposive sampling in selecting two classes from the population to become the experimental and control classes. According to Sugiyono (2010), purposive sampling is a technique for determining research samples with several certain considerations that aim to make the data obtained will be more representative.

Based on the preliminary research with the English teacher of SMAN 14 Sinjai, the teacher stated that listening ability at the class X2 is better than class X1. For the sample of the study, the researcher took two classes to get the data. The total number of the sample were 50 students. 25 students in experimental class and 25 students in the control class. Experimental class in this research was class X2 and the control class was X1.

C. Research Variable

Variable is the object of research or something that becomes the concern of the research. There are two variables in experimental research. They are Independent (X) and Dependent Variable (Y). Fred D. Kerlinger (1999) stated that all experiments have one fundamental idea behind them; to test the effect of one or more independent variables on a dependent variable (it is possible to have more than one dependent variable in experiments). While, according to Creswell (2003), Independent variables are variables that (probably) cause, influence, or affect outcomes. While dependent variable is variable that depend on the independent variables; they are the outcomes or results of the influence of the independent variables. Independent variable in this research was the use of YouTube as authentic material. Meanwhile, dependent variable in this research was improving students listening skill.

D. Research Instrument

An instrument is anything used to collect data (Schreiber & Asber-self, 2011). Instrument of the research is a tool or facility that is used by researcher for collecting data in order to get better result. To get an accurate data, the instrument that would be used in this research that is listening test.

1. Listening Test

The researcher used listening test to asses and examine the students' listening skills. The test was pre and post test and the total number of the test was 10 number with the fill in the blank questions.

E. Data Collecting Procedures

In collecting the data, there are some steps will be taken by the researcher, they are :

There are some steps to collect the data by the researcher :

1. Pre-test

- a. The researcher came to the class and asked for the students attention.
- b. The researcher explained the purpose of the research.
- c. The researcher explained the procedure of the test that will be given to the students.
- d. Pre-test was gave toward the students before they got treatment.

2. After conducting a pre-test, the researcher gave a treatment to students .

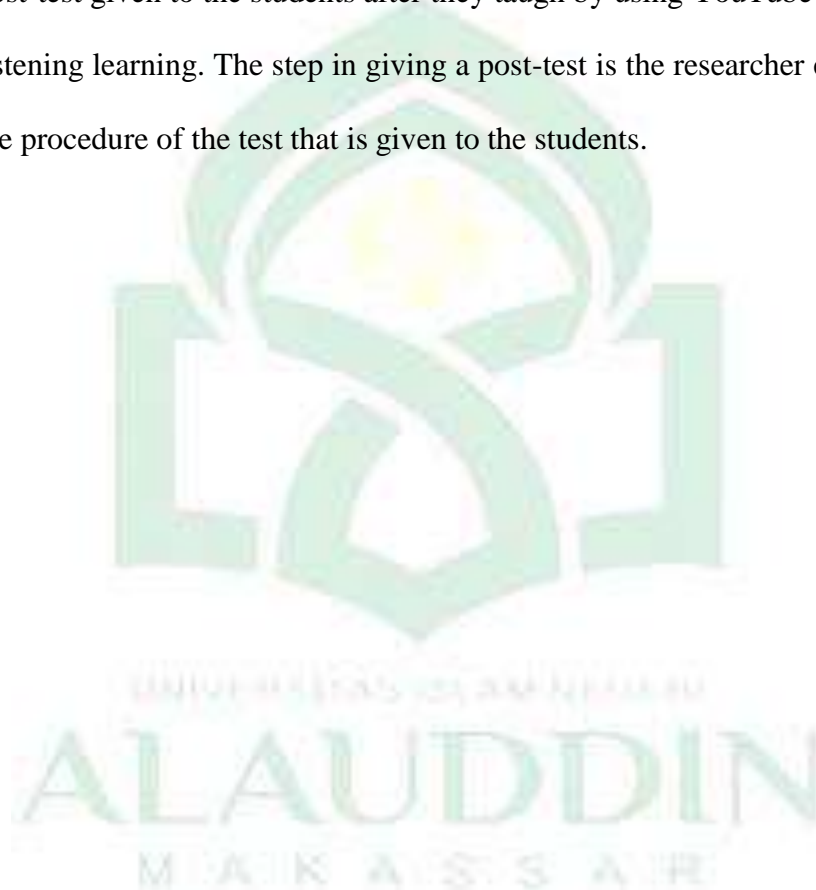

The researcher took four meetings in treatment and spent 90 minutes in each meetings. In each meetings, the researcher asked students to watched YouTube video. In the first meeting the students watched YouTube video about traveling. The second and third meeting the students watched YouTube video about hotel reservation, and the last meeting the students watched YouTube video about at the airport and on the plane. It took some steps of treatment were :

- a. The researcher gave some motivation and explain how important to learn English before starting the material.
- b. The researcher gave some explanation about the learning process.

- c. The researcher showing the video to the students.
- d. After showing the video to the students, the researcher provided feedback to the students and gave opportunities to ask a question about what the students just listened to.

3. Post-Test

The test given after giving treatment in experimental research. The post-test given to the students after they taught by using YouTube videos in listening learning. The step in giving a post-test is the researcher explained the procedure of the test that is given to the students.

F. Data Analysis Technique

1. Scoring Technique

The students listened a dialogue on video YouTube and complete the incomplete dialogue script.

Table 3.2 Classify the Score of the Students

No.	Classifications	Criteria	Score
1.	Poor	Student did not understand enough vocabulary or information to answer the Questions.	41-55
2.	Fair	While the student did not understand a lot of the vocabulary and information, he/she was able to complete some of the questions	56-70
3.	Good	The student showed a good general understanding of the vocabulary and information, with most questions completed.	71-85
4.	Very Good	The students showed a very good general understanding of all vocabulary and information, completing all the questions.	86-100

2. Statistical test

In this study, the researcher would use a T-test to find out the differences between students' scores which are taken from pre-test and post-test in experimental class and control class. Before calculating the T-test, the researcher first measures the normality and homogeneity test.

Moreover, the researcher uses SPSS for Windows software to analyze normality tests and homogeneity tests.

CHAPTER IV

FINDINGS AND DISCUSSION

A. Findings

The findings of the research based on the results of the data analysis. The data analysis used to collect data. The test consisted of pre-test and post-test. The pre-test was given to find out the students's background knowledge in listening skills before using YouTube as teaching media and the post-test was given to find out the increase of the students' listenings skill after giving the treatment.

1. Scoring Classification of Students Pre-Test

Table 4.1. The Rate Percentage Of Students' Scores Of Pre-Test

Criteria	Scores	Experimental Class		Control Class	
		Frequency	Percentage (%)	Frequency	Percentage (%)
Poor	41-55	11	44	13	52
Fair	56-70	15	56	12	48
Good	71-85	0	0	0	0
Very Good	86-100	0	0	0	0
Total		25	100	25	100

The table 4.1. indicated the rate percentage and frequency in pre-test of experimental class and control class. It showed that from 25 students in experimental class, there were 15 (56%) students got fair, and 11 (44%) students

got poor. While, in control class, it showed that from 25 students, there were 12 (48%) students got fair and 13 (52%) students got poor. It means the students ability in listening skill were low before giving the treatment.

2. Scoring Classification of Students' Post-test

The post-test was administred to the students by the researcher after the treatment. To measure the students' listening skill, the results of the pretest and post-test were compared. The frequency and percentage of the students were firstly tabulated. The researcher then assed the level of listening skill of the first grade at SMAN 14 Sinjai. The information is shown in the table 4.2.

Table 4.2. The Rate Percentage of Students' Score of Post-Test

Criteria	Scores	Experimental Group		Control Group	
		Frequency	Percentage (%)	Frequency	Percentage (%)
Poor	41-55	0	0	1	4
Fair	56-70	4	16	16	48
Good	71-85	16	64	8	32
Very Good	86-100	5	20	0	0
Total		25	100	25	100

Table 4.2. showed the rate percentage and frequency of experimental group and control group in post-test. It showed that in experimental class there were 5 (20%) student's got very good, 16 (64%) students' got good category, and 4(16%) students got fair. While in control class there were 1 (4%) students' got poor

category, 16 (64%) students' got fair category, 8 (32%) students got good category and no one of the students' got very good category. It shows that experimental class is better than the control class. It means, the students' listening skill could be increased by using YouTube as authentic material.

3. Descriptive Analysis of Pre-test and Post-test

The pre-test and post-test descriptive statistic for the experimental class and the control class had been examined by the researcher. The following table shows a descriptive study of the students' listening skill on the pre-test and post-test.

Table 4.3. The Descriptive Analysis of Pre-test of the Two Classes

Descriptive Statistics					
	N	Minimum	Maximum	Mean	Std. Deviation
Experimental Class	25	49	75	61.08	8.386
Control Class	25	41	67	54.56	7.298
Valid N (listwise)	25				

According to the table 4.3. the experimental class students had a mean pretest score 61.08 and standard deviation 8.386, whereas the control class student's had a mean pretest score 54.56 and standard deviation 7.298 from 25 students. It means that experimental class mean score ($61.08 > 54.56$) was greater than the control class mean score.

Table 4.4. The Descriptive Analysis of Post-test of the Two Classes**Descriptive Analysis**

	N	Minimum	Maximum	Mean	Std. Deviation
Experimental Class	25	65	98	80.00	7.572
Control Class	25	45	85	69.52	8.135
Valid N (listwise)	25				

Table 4.4. above shows that the experimental class students' mean post-test score was 80 and standard deviation was (7.572), while the control class mean post-test was 69.52 and standard deviation was (8.135). It means that the experimental class outperformed the control group in terms of mean score ($80.00 > 69.52$).

4. Normality and Homogeneity Test

SPSS 25 is being used by the researcher. The researcher looked at the homogeneity and normalcy of the data. The homogeneity test was conducted using Levene, while the normality test involved a single sample of Kolmogorov Smirnov. The test results are shown in the following table.

Table 4.5. The Normality Test**One-Sample Kolmogorov-Smirnov Test**

		Unstandardized Residual
N		50
Normal Parameters ^{a,b}	Mean	.0000000
	Std. Deviation	9.17627919
Most Extreme Differences	Absolute	.068
	Positive	.061
	Negative	-.068
Test Statistic		.068
Asymp. Sig. (2-tailed)		.200 ^{c,d}

a. Test distribution is Normal.

b. Calculated from data.

c. Lilliefors Significance Correction.

d. This is a lower bound of the true significance.

Based on the results of the aforementioned normality test, which revealed that the significance value was greater than 0.05 and was therefore ($0.200 > 0.05$), it was decided that the residual value was normally distributed.

Table 4.6. The Homogeneity Test**Test of Homogeneity of Variances**

		Levene Statistic	df1	df2	Sig.
Listening Test Result	Based on Mean	.014	1	48	.905
	Based on Median	.011	1	48	.916
	Based on Median and with adjusted df	.011	1	47.236	.916
	Based on trimmed mean	.009	1	48	.927

According to the findings of the previous homogeneity test, it was clear that the significance value exceeded 0.05, which led to the conclusion that the variance of the data was the same ($0.927 > 0.05$).

5. Hypothesis Testing

The hypothesis in this study was tested using the Independent Sample T test. An independent sample t test will be used to compare two unpaired samples. To determine the statistically significant values in this study, independent sample t test results from the post-test scores for both classes were employed. The hypothesis was accepted if the significance value was less than 0.05, and it was rejected if it was larger than 0.05.

Table 4.7 Independent Sample Test

Independent Samples Test									
		Levene's Test for Equality of Variances		t-test for Equality of Means					
		F	Sig.	t	df	Sig. (2-tailed)	Mean Difference	Std. Error Difference	95% Confidence Interval of the Difference Lower Upper
Post-Test Result	Equal variances assumed	.342	.561	4.145	48	.000	9.480	2.287	4.882 14.078
	Equal variances not assumed			4.145	47.284	.000	9.480	2.287	4.880 14.080

According to the results of the independent sample t-test, the significant value (2-tailed) 0.00 was less than 0.05 when equal variances were assumed. Thus, the null hypothesis (H_0) that stated that using YouTube to improve pupils' listening skills was refuted. On the other hand, the alternative hypothesis (H_a), which claimed that using YouTube is successful in enhancing pupils' listening skills, was approved. It meant that the research hypothesis had been approved.

B. Discussion

This section provides the discussion about the research finding in the previous section. This also provides the improvement of the students' listening skill using YouTube at the first grade of SMAN 14 Sinjai.

1. The Students Listening Skill Before Treatment

In the first meeting before giving the treatment to the students, the researcher gave a listening pre-test. The test consisted of ten numbers of fill in the blank. After the students' collected the pre-test, the researcher calculated the correct answer. The researcher gave 10 points for each correct answer and deduct the point for incorrect answer. After the researcher collected the data, the result of the pre-test showed that from

twenty five students of experimental class at SMAN 14 Sinjai, there were 15 (56%) students got fair, and 11 (44%) students got poor. Most of the students got low score in doing the pre-test especially in fair classification. It means the students ability in listening skill still low.

2. The Students' Listening Skill After Treatment

After the researcher applied YouTube in the classroom during listening session for the students, the researcher found that some of students seem to be active in the classroom. During the treatment, the application of YouTube videos made the students' feel easier and fun to learn listening in the classroom. However, there were some students still did not pay attention, so the researcher had to make them active in the classroom by pointing at them and directly asking some vocabulary they get while watching YouTube video.

In the last meeting, the researcher gave a post-test. The test consist of ten numbers of fill in the blank. After the researcher collected the data, the result of the post-test showed that from twenty five students of experimental class at SMAN 14 Sinjai. There were 5 (20%) student's got very good, 16 (64%) students' got good category, and 4 (16%) students got fair. Most of the students got high score in doing the post-test especially in very good classification.

After the researcher analyzed the data, it was found that the mean score of the pre-test was 61,08 and the post-test score was 80,00. It can be seen that the students' post-test score is higher than pre-test score. It can be

concluded that using YouTube can improve the listening skill at the first grade of SMAN 14 Sinjai.

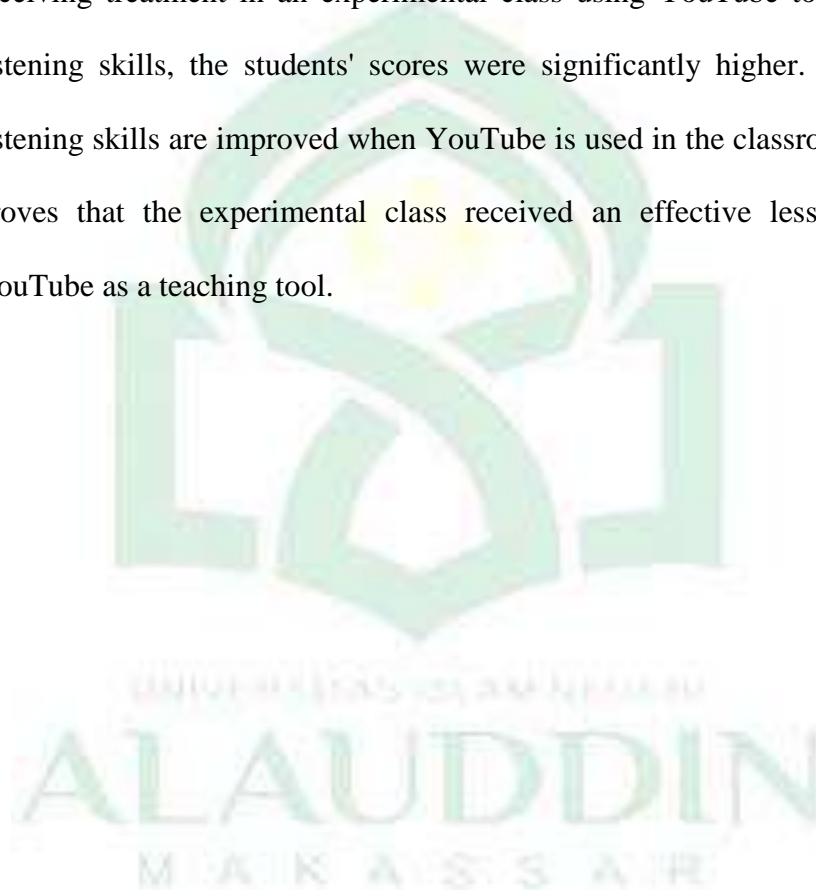

According to the results of the independent sample t-test, the significant value (2-tailed) 0.00 was less than 0.05 when equal variances were assumed. The result of the findings showed that alternative hypothesis meaning that there was a significant effect of applying YouTube video in improving listening skills was accepted. In applying YouTube video, the data were collected through the test and showed that students' listening skill got significant improvement. Based on the results, it can be concluded that use of YouTube video was affective in improving listening skill at the first grade students' at SMAN 14 Sinjai.

Rizkan (2019) conducted the effect of using YouTube videos as the teaching media on the students' listening skill (the case of second-semester students of English education study program of IKIP PGRI Pontianak). He found that YouTube was more effective than using audio to teach listening comprehension and there was an interaction between the teaching materials in listening comprehension. These results have established the finding of the study that YouTube videos succeed to give a significant effect on student's listening comprehension performance during the learning.

Karkera & Chamundeshawari (2018) YouTube is a reliable and effective resource for teaching listening skills, which improves students' English-speaking abilities, which are more important in all stages of one's

profession. The class is more engaging when listening skills are taught through YouTube. Through its audio-visual feature and real content covering a wide range of themes, it engages the students'. Students' vocabulary and pronunciation will grow as a result of improving their listening skills, leading to improved communicative abilities.

Based on the findings of this study, it was established that after receiving treatment in an experimental class using YouTube to improve listening skills, the students' scores were significantly higher. Students' listening skills are improved when YouTube is used in the classroom. This proves that the experimental class received an effective lesson using YouTube as a teaching tool.

CHAPTER V

CONCLUSION AND SUGGESTION

There are two sections to this chapter. The first section covers the conclusion and the second section includes suggestion.

A. Conclusion

The researcher came to the conclusion that using YouTube to teach listening to first grade students at SMAN 14 Sinjai was beneficial based on the findings and discussion from the preceding chapter.

The experimental class's average pre- and post-test results were used as proof. The mean pre-test score for the students was 61.08, and the mean post-test score for the students was 80.00. Consequently, the null hypothesis (H₀) was disproved and the alternative hypothesis (H_a) was accepted. The study had proven that using YouTube in the classroom helped students' improve their listening skills. It showed that utilizing YouTube to teach first-graders at SMAN 14 Sinjai was a successful and enjoyable method of increasing their listening skills.

This study revealed that YouTube video benefits EFL learners, such as improving students' confidence, enjoying the learning process, making the learning process more fun, and increasing students' interest in learning.

B. Suggestion

Based on the conclusion above, the researcher give some suggestions follows :

1. The researcher believes that teachers will become more creative and able to devise strategies or methods to prevent students from becoming disinterested in class. The teacher should use YouTube in classroom because YouTube videos has a fabulous prospective in English language classroom instruction. As one of the most used websites, the use of YouTube videos in EFL classrooms has enhanced students' English language skills and especially listening comprehension by opening up a new world for a more interesting and productive learning environment.
2. The students should practice their listening skills at home. They can do this by viewing YouTube videos, which will also help them automatically expand their vocabulary.
3. The students should start using the appropriate and relevant videos from YouTube to learn English from the native speakers, inside and outside the classroom.
4. The researcher advises students to participate more actively in class and to have the courage to respond to the teacher's question.
5. The researcher believes that individuals who are interested in undertaking the same research might use this study as a guide. To locate more references, the other researcher should read more articles and journals.

APPENDICES

APPENDIX V

Documentation

CURRICULUM VITAE

Andi Mutmainna was born in Sinjai, South Sulawesi, on September 19th 2000. She is the first child of A. Baso AG and A. Juliana. The researcher got her first education at SDN 97 Arango and graduated in 2012. Then, she continued her study at SMPN 2 Sinjai Barat and graduated in 2015. After that, she entered SMAN 14 Sinjai to continue her senior high school. She graduated and enrolled as a university student at Alauddin State Islamic University of Makassar to continue her study on English Education Department in 2018.
