ACKNOWLEDGMENT

بِسْمِ اللهِ الرَّحْمَنِ الرَّحِيْمِ

Alhamdulillahi Rabbil 'alamin, the researcher, would like to express her confession and gratitude to the most precious, Allah SWT, for guidance, grace, and mercy in completing this research. Sholawat and salam may still be handed over to the great prophet Muhammad SAW, his family, and his disciples until the end.

The researcher in arranging this research effort to achieve the maximal result to fulfill the hope of all sides, but the researcher knows there are mistakes and the lack because it is out of the researcher's ability. The researcher wants to say sincere thanks, especially to my beloved family, for all their hopes, prayers, support, and attention in each step of the research was done.

By helping and participating with another individual, this research would have been done as we hoped. Because of that, the researcher would present the deepest thanks to the following:

1. Prof. Hamdan Juhannis, MA. Ph.D. as Rector of Islamic State University of Alauddin Makassar for his advice during the period the researcher study at the university.

2. Dr. Hasyim Haddade, S.Ag., M.Ag. as the Dean of Adab and Humanities Faculty, Dr. Jumharia Djamereng, M.Hum. as the Head of English and Literature Department, and Syahruni Junaid , S.S., M.Pd. as the Secretary of

the English and Literature Department for their support encouragement, and help.

3. Dr. Muh. Syukri, S.S., S.Pd., M.Pd. as the first supervisor and H. Muh. Nur Akbar Rasyid, M.Pd., M.Ed., Ph.D. as the second supervisor who had make their time to helped, guided, and supporting the researcher during writing this research.

4. Dr. Jumharia Djamereng, M.Hum. and Dr. Sardian Maharani Asnur, S.Pd., M.Pd. as the examiners who had given many positive suggestion and criticism to this research.

5. My parents and my brother, also my big family for all the supports and prayers to every process of the researcher.

6. The family of Mr. Hasrullah who has given their space of their home to the researcher living and getting safety during the process of study in UIN Alauddin Makassar.

7. The family of Mr. Hasbullah, S.Sos. who are given the supports and help in material and morality.

8. The researcher close friend in registration number 1927042024 thanks a lot of for always beside of the researcher for a long time.

9. The researcher's classmates AG 1-2 BSI 2019 also we know as elitefah19. Thanks for time, helping, supporting, and contributing to this research. Especially for person who has registration number 40300119004, the deepest

thanks for all the time, helping, motivation, and support to the researcher since 2019 until in the future expectation.

10. All of friends of English and Literature Department 2019 who have often helped and give information to the researcher that related to the process of learning.

11. All of the students in English and Literature Department 2021.

12. All of people who cannot mention big thanks for all the supports. May Allah SWT reply all of your kindness.

The researcher realizes that writing this research is far from good. The remaining mistakes are the researcher's own; constructive observation and suggestion would also greatly appreciated and all our efforts are rewarded by Allah SWT, Aamiin.

ABSTRACT

Name	:	**Mawaddah Warahmah**
Reg. Number	:	**40300119006**
Major	:	**English and Literature**
Faculty	:	**Adab and Humanities**
Thesis Title	:	**The Influence of Students Motivation to Students Achievement in Learning English Structure at The Four-Semester English and Literature Department of UIN Alauddin Makassar**
Supervisor I	:	**Dr. Muh. Syukri, S.S., S.Pd., M.Pd.**
Supervisor II	:	**H. Muh. Nur Akbar Rasyid, M.Pd., M.Ed., Ph.D.**

This study aims to know whether or not there is an influence on student motivation to student achievement in learning English grammar at the four-semester English and Literature Department of UIN Alauddin Makassar. The sample of this research is 23 students from each class 4th semester of the English and Literature Department and selected stratified. The researcher used the quantitative descriptive method. To obtain the data, the researcher used questionnaires. The questionnaires were aimed to find out the student's motivation, both intrinsic motivation and extrinsic motivation, also the student's achievement. The result of this study presented that students' motivation had influenced students' achievement in the significance value Sig.= $0{,}000 < 0{,}05$, which means it fulfills the significance criteria. Contrariwise, T-count is $5{,}071 > 2{,}086$, which means rejecting the null hypotheses and accepting the alternative hypotheses in testing both variables. The regression test shows that motivation contributes 55% percent to student achievement.

Keyword : **Motivation, Achievement, English Structure, English Students.**

CHAPTER I

INTRODUCTION

A. Background

Grammar is essential in languages, including English; by using good grammar, people can easily understand what we say in speaking or writing. Grammar is a system of rules (and exceptions to those rules) that reveals and structures meaning in language and is made up of two things: syntax and morphology. The syntax concerns the pattern or sequence of words in sentences, while morphology, as the name suggests, is concerned with the shape or nature of words (Eunson, 2012). According to Eunson (2012), grammar is language's rule for compiling a sentence's meaning consisting of the appropriate order and form.

The importance of grammar in using language is seen in the example in Baden; the sentence *"I gave my sister a sweater for her birthday"*. I and my are the same word for one person, but the word's usage is different. Likewise, in the phrase sweater, the word sweater means singular or only one sweater is given, but if you write or say that the number of sweaters given is more than 1, then the word used is sweaters or what is known as plural. If it is written in the sentence *"I my sister gave sweater for her birthday"*, it is a wrong sentence; who can understand the meaning of what we say or write?

Based on the experience of researchers who have experienced grammar classes consisting of students in different educational backgrounds, more

1

precisely the Part of Speech class in semester one in English and Literature Department, some students already know basic grammar. In contrast, others are still very unfamiliar with the grammar. The interesting thing about this was that the researchers tried to ask some students. Some students who knew and didn't know about the terms in the part of speech were those who knew they got grammar knowledge from the English course they had attended in their senior high school years. Those unfamiliar with grammar are those whose English background only comes from English lessons at school. And at the end of the semester, to be precise, when the subject of grammar announced the student's achievement, many of these students got results below standard, which caused them to repeat the subject to get good learning achievement. The same thing also happens to fourth-semester students of the English and Literature Department; based on interviews with three students on May 21, 2023, their learning achievements in grammar are very good, but some students still need to improve.

Based on the curriculum for learning grammar in the class, there are only three credits (150 minutes), so, the time they have is limited. Therefore, many students take another way to get maximum learning achievement in their spare time. Motivation is things to make or influences a person to achieve their goals. Therefore, improving skill or knowledge needs motivation. Motivation to improve foreign language caused on their behalf, such as a person who wants to apply for a job must be fluent in a foreign language or to make it easy to get employment in the future (Santosa, 2018). So, the student has a motivation to

learn or improve their skill in English as a foreign language; a student will know better and fast when they have the motivation or student motivation.

Student's achievement and motivation in perspective of the Al – Quran also explain in Q.S At – Taubah /9 :105, as follows:

وَقُلِ ٱعْمَلُواْ فَسَيَرَى ٱللَّهُ عَمَلَكُمْ وَرَسُولُهُۥ وَٱلْمُؤْمِنُونَۖ وَسَتُرَدُّونَ إِلَىٰ عَـٰلِمِ ٱلْغَيْبِ وَٱلشَّهَـٰدَةِ فَيُنَبِّئُكُم بِمَا كُنتُمْ تَعْمَلُونَ ﴿١٠٥﴾

"Waquli iAAmaloo fasayara Allahu AAamalakum warasooluhu waalmuminoona wasaturaddoona ila AAalimi alghaybi waalshshahadati fayunabbiokum bima kuntum taAAmaloona "

Meaning:

And say, "Do [as you will], for Allah will see your deeds, and [so, will] His Messenger and the believers. And you will be returned to the Knower of the unseen and the witnessed, and He will inform you of what you used to do."

Based on the words of Allah SWT in the Qur'an above, the meaning of that word can be seen that humans are allowed to do many things in this world and will be witnessed by Allah SWT and given value in the hereafter. Included in this is increasing student achievement in English grammar in many ways to get their goal achievement.

The general indicators in measuring student achievement in the academic field are usually seen in achievement tests (Cunningham, 2012). The students of

UIN Alauddin Makassar have studied grammar, especially as students English and Literature Department. Even though they had learned about grammar in class, some students still needed help how to write or speak using good grammar. So, some students need better achievement in grammar courses. Students' motivation is essential in learning to get their goal achievement, especially in improving English grammar as a foreign language. The bases can be from a student's desire for themself, as usual, which we know as intrinsic motivation; on the other side, reasons can influence by another factor that we know as extrinsic motivation(Moris and Maisto in Subakthiasih & Putri, 2020). Therefore, this research is important to examine the student's motivation influence the students' to get their grammar (English structure) goal achievement.

Several studies have been undertaken related to this study. First, *motivation, learning strategy, and learning achievement of the students at Depok 2 state vocational school (SMK Negeri 2 Depok) studies* by Wiyono (2018). This study concludes that the student's motivation and learning correlate with students' achievement. Two other studies are *The effect of blended learning to the students achievement in grammar class* by Isti'anah (2017), and *Learning motivation and student achievement : description analysis and relationships* by Riswanto & Aryani (2017). These studies focus on the factors influencing the students' achievement in the learning process.

The researcher's expectation by conducting research on student learning outcomes about grammar in the four-semester of the English and Literature

Department is to be able to find out the influencing of students' motivation to students' achievement in learning English structure. In the future, a more efficient and effective way of learning grammar can formulate so, that all students in the four-semester English and Literature Department of UIN Alauddin Makassar achieve much better academic achievement.

B. Research Question

Based on the background above the researcher formulates the question.

Is there an influence on students' motivation to students' achievement in learning English structure at the four-semester English and Literature Department of UIN Alauddin Makassar?

C. Objective of study

Based on formulates above, the research aims to determine motivation's influence on students' achievement in learning English structure at the four-semester English and Literature Department of UIN Alauddin.

D. Significant of the research

Based on the objectivities above, the significance of this research are:

1. Theoretically, this research can help or give more information and knowledge about language mainly to students of English and literature who are interested in this topic. And the last, this research can use by the next researcher.

2. Practically, the researcher hopes the reader can understand more about student motivation on student achievement in learning English structure at the four-semester.

E. Scope of the research

In English, four skills are learned in the scope of formal and informal learning, but in this study, only one of these skills is grammar. More precisely, students' achievement in learning English structure at the four-semester. Also, the student's motivation in learning English structure or grammar. The theory used to analyze the students' motivation is intrinsic and extrinsic motivation by Ryan & Deci (2017).

F. Hypothesis

Hypotheses are brief statements that must be proven true. The truth will be verified through data collection in research.

The hypotheses in this study are:

H_0: There is no influence of motivation on student achievement in learning English structure to the four semester English and Literature Department.

H_1: There is influence of motivation on student achievement in learning English structure to the four semester English and Literature Department.

CHAPTER II

REVIEW OF LITERATURES

A. Previous Studies

The researcher found some previous findings which related with this research:

Abu Bakar et al. (2022) in their research journal "Influence of Students' Motivation on Academic Achievement among Undergraduate Students in Malaysia". This study's purpose is to see the motivation of bachelor's degree students in their learning achievement. This study uses a quantitative research method, and the results of this study are substantial for the students who are in good and better achievement is similar. In the conclusion of this research, the students' motivation has a good impact on the student's achievement.

Paramitha (2017) in their thesis entitled "The Relationship between Students' Motivation and their Achievement in Studying the English Language". This study explores the correlation between students' academic achievement and motivation in learning the English language. This study used a quantitative method with questionnaires to answer the research questions. The result of this study was intrinsic motivation most affected than extrinsic motivation. This research concludes that intrinsic motivation is highly correlated with the student's achievement.

Putri (2019) in her thesis entitled "An Analysis of student's motivation and their achievement in Learning English at the Department of the English Education". The purpose is to identify and investigate English learning at the Department of English Education. It used the instrumental motivation theory by Gardner. The research used quantitative research methods. As for the study results, half students have integrative motivation in learning English, but more students have instrumental motivation. This research concludes that instrumental motivation is dominant.

The three studies above have the same topic as the research topic. However, there are differences, one of which is the object difference; the first studies above used first-semester students as their research objects, the second study used the students randomly in the collage, and the last one of them used participants from the students in the second years. In contrast, the object of this research is the four-semester students of the English and Literature Department of the Faculty of Adab and Humanities UIN Alauddin Makassar.

B. Reviews of literature

1. Psycholinguistics

Psycholinguistics is a field of science that examines where a person gets language from, how language used in life to understand the meaning of language with each other, and how the human brain understands and processes a language. The disciplines of psycho and linguistics gave birth to the sub-discipline of psycholinguistics (Fernandez & Cairns, 2010). The

aspect of the language studied in psycholinguistics is language in terms of biological characteristics that stem from human neurological functions (Fernandez & Cairns, 2010).

Psycholinguistics consists of two words, psychology and linguistics. Psycholinguistics is a scientific discipline that studies human behavior and the basic process of the mind before action occurs. In contrast, linguistics is the science of language. The presence of the field of psycholinguistics must be distinct from the results of linguistic studies. The discipline of psycholinguistics has developed with several sub-disciplines, including; theoretical psycholinguistics, developmental psycholinguistics, social psycholinguistics, educational psycholinguistics, neuro psycholinguistics, experimental psycholinguistics, and applied psycholinguistics (Harras & Bachari, 2009).

Psycholinguistics is the study of language—studies on phonology, morphology, syntax, and semantics. The scope of psycholinguistic studies are; language processes in communication and thought, language acquisition, language behavior, meaning acquisition, language in abnormal people, speech and cognition, and language learning (Suharti et al., 2021). Psycholinguistics is the reasoning of the relationship between human needs in expression and communication through language that has been learned since childhood gradually (Damayanti & Suryandari, 2004).

Based on some of the definitions above, it can be concluded that psycholinguistics is a field of science that studies language and the human mind. How the mind acquires and produces language as a means of human communication in speaking and writing that can be understood by each other.

2. Grammar

Grammar is an important aspect of knowledge, and this ability used in expressing and interpreting something quickly and precisely. Based on Strumpf & Douglash (Cited in Royani & Sadiah, 2019), "the effectiveness of manner and the clarity of one's speaking and writing obtained from learning grammar". Good grammar will create clear communication to avoid misunderstood between one another.

Al-Mekhlafi & Nagaratnaam (in Mirazna & Hikmah, 2019), grammar is an important aspect of writing and speaking communication. It has a war that is also important for success in learning English. Mirazna & Hikmah (2019) in their research journal that grammar is the study of how a sentence is formed from several word arrangements, and grammar also consists of several parts such as words, sentences, paragraphs, nouns, verbs, adjectives, adverbs, and punctuation. Grammar in a sentence plays a significant war in achieving mastery of the English language.

Alijinian (in Yaccob & Yunus, 2019) said that students must master grammar to make sentences with precise meanings. Grammar in English is

important and cannot be avoided (Savignon, 2017 Cited in Yaccob & Yunus, 2019). A student must make grammatical sentences by studying grammar so, the intended message can be conveyed.

Richards & Theodore (in Al-Jarrah et al., 2019) The language structure is described in a book or the knowledge a native describes their language. Grammar can be defined in various ways based on how someone receives and uses it. *Grammar* is the foundation of a person's structure in expressing their abilities. With grammar, one can control meaning and usage, avoid ambiguity, and express freely in English (Al-Jarrah et al., 2019).

Grammar and structure have the same meaning in the learning process; if students learn grammar, then students also learn structure, and vice versa (Isyam, 2010).

3. Teaching English as Foreign Language (TEFL)

English is a second language in half of the world, but in other parts of the world, English is a foreign language. Therefore English is taught in schools but needs to be socially and nationally bound. The language has many functions for students with specific purposes, so, materials designed for the teaching and learning process are developed, be it medical English, science, agricultural engineering, tourism and the like. English has been established as one of the language subjects in the classroom and has more

study hours than other languages in the curriculum (Broughton et al., 1980).

First language acquisition for children must be kept from their parents' strategies. Likewise, in learning a foreign language, students need a learning strategy. Some stages in language learning are; imitation, repetition, formulaic speech, and incorporation (Holensinska, 2006). Teaching English as Foreign Language (TEFL) is a method developed to teach students whose first language is not English. Many students have motivation and interest in the language, but several students need more motivation because they don't like learning English. In this situation, the teacher must significantly generate students' learning motivation and a good learning environment (Rohmah, 2013).

Student motivation is crucial to their learning (TEFL). Without inspiration, pupils rarely find studying enjoyable. Motivated students can readily find ways to train themselves and develop their abilities. Taking an interest in the student's education, demonstrating excitement, establishing a welcoming and encouraging positive learning environment, forging strong connections with your students, and emphasizing the advantages that are Using goal-setting and making the curriculum and instructional materials relevant, knowledge of English can Using effective teaching techniques, adjusting to various circumstances. It can motivate the students (Rohmah, 2013).

4. Learning English Structure

Grammar subject in UIN Alauddin Makassar was learning in two semesters, in the first semester as Part of Speech and in the second semester as intermediate structure. Each of semesters is three credits in both of two semesters. There are several topics in learning grammar:

a) Types of clause

There are two types of clauses. They are independent clauses and dependent clauses. The independent clause can stand by itself as to complete sentence, but the dependent clause cannot be a complete sentence by itself (Giovanelli, 2014).

b) Noun clause

The noun clause is dependent. A noun clause can be a subject, an object, or an object of a preposition (Montgomerycollege, 2020)

c) Adjective clause

Dependent clauses that give information about nouns are adjective clauses. An adjective clause begins with *who, whom, which, that, whose, when, where, and why* and follows the word it modifies (Montgomerycollege, 2020).

d) Adverb clause

A clause gives information about verbs, adverbs, and adjectives it is an adverbs clause (Lin, 2015).

e) Types of sentences

There are four sentence types: simple sentences, compound sentences, complex sentences, and compound-complex sentences. The four categories of sentences have different functions. First, simple sentences convey limited information by asking questions and showing direct statements. Secondly, compound, complex, and compound-complex sentences have similar functions, such as; connecting similar ideas, showing different ideas, and more (Andersen, 2014).

f) Simple sentences

A simple sentence is a sentence with one independent clause. Example "When will you graduate?" (Andersen, 2014).

g) Compound sentences

A compound sentence is a sentence that contains two independent clauses connected by a coordinating conjunction (for, and, nor, but, or, yet, so). For example, "I like reading, and I also like traveling." (Walden University, 2020)

h) Complex sentences

A complex sentence is a sentence consisting of one independent clause and one or more dependent clauses that use a subordinating conjunction. For example, "Boy went to the market even though he was busy" (Jensen, 2019).

i) Compound complex sentences

A compound-complex sentence combines a compound sentence and a complex sentence. Example: "I tried to eat more fruits, but because the snacks were so, delicious, I could not maintain a healthy diet" (twinkl, 2020).

In his book, Baden Eunson (2012) described grammar as beginning in part of speech. The function of the word in sentences determines part of speech or class of the word. In the learning English structure especially in English and Literature Department of UIN Alauddin Makassar in the first semester we know as Part of Speech. There are eight parts of speech:

a) Noun (name, places, things, qualities, or concept)

b) Verb (action or being)

c) Pronoun (substitute for nouns)

d) Adjective (describe, quality, or modify nouns or pronouns)

e) Adverb (modify the verbs or adjectives)

f) Preposition (show relationship between another class word)

g) Conjunction (links words or sentences)

h) Interjection (feelings or attitudes)

Structure and writing expression are one of the tests to know students' ability in English grammar (Kaplan et al., 2014). The test of structure will show the students achievement in learning English structure/grammar.

5. Students Achievement

Student Academic achievement is a learning result based on the curriculum or academic standards of education, also defined as a measure of student achievement of the components of the curriculum (Tian & Sun, 2018). Academic Achievement is an assessment of the development of students who have carried out joint learning with teachers based on a curriculum for a particular time. The process of learning together with the teacher considers aspects of knowledge, aspects of skills, aspects of abilities, aspects of attitudes, aspects of values, and other aspects (Tian & Sun, 2018).

Peters A. Michael (2017) states student achievement in schools has an imbalance in values between students which requires wise considerations and solutions. Because student achievement has different levels among students, causing the standard of assessment of learning outcomes to be seen from the process to the results in order to create fairness (Peters, 2017).

Several factors affect student achievement: school leadership, motivations, behaviors, emotions, expectations, self-concept, self-composition, locus of power, socioeconomic class, school environment, school climates, teachers' collective efficacy, self-worth, social adaptation, parental participation, purpose orientation, and types of learning styles (Özen, 2017).

Based on the explanation above, achievement is the result of student learning in a class that follows a curriculum within a certain period, and achievement in a class is not evenly distributed so, that the benchmark for assessing achievement is not only value but process as well. An achievement, of course, cannot be disconnected from the factors that can influence achievement.

Assessment of academic achievement is evaluating student learning outcomes using data collected based on an assessment curriculum. In contrast, assessing students from campus and off-campus activities influences student learning processes so, that all the parts are listed in the academic achievement assessment (Tian & Sun, 2018).

6. Student Motivation

Motivation is the relationship between process and environment that impacts the learning environment of students conceptually and socially so, that it can be a supporter or inhibitor in achieving goals (Schuck et al.,2014 in Gustiani, 2020).

Learning motivation is the overall stimulus within students that causes learning activities and ensures the continuity processes of learning so, that students can achieve the desired goals. Based on some of the opinions above, the researcher concludes that Motivation is an encouragement or stimulant that makes someone do his job happily without

coercion to work well to produce something satisfying (Muhibbin Syah, 2013 in Abdullah, 2022).

Motives are speculative make-up used to explain why a person does something. Motivation can be divided by goals (specific behaviors for immediate purposes) and by strategies (using methods to achieve satisfying goals). For example, a person has a goal to become a police officer in the future and uses this as a motivation to live a healthy life and exercise diligently to achieve this goal. Motivation is a desire that influences a person to initiate various ways to achieve their desires.

Motivation is a factor that influences a person to have ambition in achieving goals. Motivation is also a way to achieve goals and minimize failure with various strategies that have been arranged. Therefore, motivation is the path to the destination. People take a desire and action to achieve goals, meaning someone who lives with motivation. Therefore, each individual has different motivations to achieve their goals (Özen, 2017).

Ryan & Deci (2017) divide two motivations that affect student achievement:

a) Intrinsic motivation, this motivation supports all actions in achieving goals at every level. It is based on self-awareness and self-will. This motivation consists of internal factors such as high curiosity, confidence, influence, and satisfaction when succeeding in something.

Because of intrinsic motivation, the people conducting the research are motivated to do things for themselves rather than as a result of an activity.

b) Extrinsic motivation is the expectation of what has been done. It exists because of external outcomes to be achieved, such as incentives, status, value, time, or rewards. For example, a child is asked by his mother to help clean the house and will get a reward if the house is clean. The promised reward motivates the child to clean the house.

In the book Curriculum and Learning by Oemar Hamalik (2013; 121), the book states that several factors encourage intrinsic and extrinsic motivation (Amna Emda, 2017). The following are the factors that cause a person's motivation:

a) Awareness of the students themselves of the importance of a lesson and their learning needs in itself will motivate students to achieve a goal.

b) A personality a teacher in a class, a friendly teacher, will easily foster students' enthusiasm in the direction that suits their goals.

c) The influence of the student's community, if the community causes learning motivation, the student's motivation is extrinsic.

d) The atmosphere of a class or student learning environment also affects a student's learning motivation.

7. The Influence of Students' Motivation on Students' Achievement

The students' motivation influences the students' achievement in the learning process. Motivation is strongly related to achievement in the process of learning a language (Ur, 1991). Internal and External motivation directly influences students' achievement because they help students have the desire and effort to achieve their goals (Choosri & Intharaksa, 2011).

Boo Wang, in Paramitha (2017) states that the most important factor is motivation to influence the student's achievement in learning English. His other research also mentioned that students' motivation had a close relation to influencing the student's achievement in learning English and non-English.

Motivation had a high and positive correlation with students' achievement scores in learning English grammar (Dilshad et al., 2019). The hope to go or live in a place with much fluency in English is one of the reasons for learning English grammar. The reason influences the student's motivation to learn English grammar, and as a result, they will have the ability and better achievement (Sholihah, 2022).

CHAPTER III

RESEARCH METHODOLOGY

A. Research Design

This research used correlation research to see the influence of students' motivation on students' achievement in learning English structure in the fourth semester of the English and Literature Department of UIN Alauddin Makassar. The research method used descriptive quantitative, where the results were in the form of numbers and analyzed statistically.

Relationship research aims to know the relationship between two or more variables and uses a theory to explain, predict, and control a symptom (Siregar, 2017).

B. Population and Sample

1. Population

The total number of study subjects, including living creatures, inanimate objects, symptoms, test results, or events, is referred to as the population. The population can be estimated using four criteria: content, units, coverage, and time (Sinaga, 2014). The set or group of all the units to which the research's findings are applied is referred to as the population. According to the definition of population, all the units to which research findings can be applied are included in it. In other words, a population is a grouping of all the units with the variable qualities that are the subject of

the study and for which general conclusions can be drawn (Shukla, 2020). In research, a population is an environment with certain characteristics as an object/subject and quantity that researchers used (Sitoyo & Sodik, 2015).

Based on the above understanding, it determined that the population in this research is fourth-semester students of the English and Literature Department of UIN Alauddin Makassar.

Table 3. 1 Population of the research

Class	Students
AG 1	28
AG 2	29
AG 3	32
AG 4	25
Total	114

2. Sample

Suryani and Hendryadi (2013) say that a sample is a portion of the population that will be taken for research, and the research results represent the population as a whole.

In determining the sample of a population, there can be divided into two categories of sampling techniques: probability sampling and nonprobability sampling. In this study, probability sampling used, a sampling method where each member of the population has the same

opportunity to become a sample (Siregar, 2017). In this study, we used the proportionate stratified random sampling method.

The sampling technique used proportionate stratified random sampling, where all populations in each stratum have the same chances and opportunities to be selected in a randomized form. According to Arikunto (2008), if the population is less than 100 people, then the sample is taken as full, but if the population is more than 100 people, then 10-15% or 20-25% of the population can be taken. Because the population in this study is more than 100 people, the sample to be taken is 20% of the population. The samples:

Sample   = Population x 20%

              = 114 x 20%

              = 23

The sample of this research is twenty-three students from four classes. The sample proportion in each strata is 23/114 = 0,2.

Strata	Members of population	Proportion	Sample	Percentage of sample
AG 1	28	0,2	6	26%
AG 2	29	0,2	6	26%
AG 3	32	0,2	6	26%

Strata	Members of population	Proportion	Sample	Percentage of sample
AG 4	25	0,2	5	22%
Total	114		23	100%

C. Variables

Variables are objects or characteristics that observed and have a value that can be measured or calculated (Sinaga, 2014). There are two variables, namely independent variables and dependent variables. Independent variables can change another variable; in contrast, dependent variables are variables that independent variables can change. In this study were two variables. Motivations as an independent variable mentioned "X." Achievement was a dependent variable (Y).

D. Instrument

The instrument used for this research is questioners. The first questioners were collecting information on students' achievement in structure (grammar) of the four-semester English and Literature Department of UIN Alauddin Makassar.

On the other hand, the second questioners were collecting the students' motivation. The questioners consisted of twenty questions and it had adapted from Apriliana (2013). Questions 1-10 are the questions to collect information about intrinsic motivation, and questions 11-20 are questions for extrinsic motivation. The questionnaire used in this research is close. The questionnaire used a five-point Likert scale ranging from strongly disagrees to agree strongly.

The Likert scale is a variable measurement scale - variables that are often used in questionnaires and various surveys. Measuring an opinion, attitude, and perception of a person or group towards a social phenomenon can use a Likert scale (Duli, 2019). The answer form consists of strongly agree, agree, neutral, disagree, and strongly disagree.

Statements	Score
Strongly agree	5
Agree	4
Neutral	3
Disagree	2
Strongly disagree	1

E. Procedures in Collecting Data

The data in this research collected by the students in the four-semester English and Literature Department of UIN Alauddin Makassar. It focused on student's achievement and motivation in structure that was collecting in steps:

1. The first questioners to finding the students' achievement and the second questioners to finding the students' motivation.

2. Questioners, the researcher were sharing a questioner for the students' as the sample of this research using Google form.

3. Asking for the sample to fill the questioners and collect the answer.

4. The researcher analyzed to identify the influence students' motivation to students' achievement in grammar.

F. Technique in Data Analysis

To analyze the data collected, the researcher focused on identifying the document of the student's achievement and the student's motivation by the result of questioners.

1. Normality Test

This test aims to determine whether the population of this study is well distributed. One test that can be used is Kolmogorov-Smirnov, with steps, namely (Siregar, 2017):

a) Make a hypothesis in a sentence description

b) H_o = Data is normally distributed

c) H_a = Data is not normally distributed

d) Determine the risk of error/significance level (α)

e) Testing rules = H_o is accepted if $D_{count} < D_{table}$.

f) Calculating D_{count}

g) Comparing D_{table} with D_{count}

h) Make a decision

The normality test in this research used Kolmogorov-Smirnov test, it used SPSS 27 for windows.

2. Simple linear regression analysis

This analysis aims to see the relationship between one variable where one variable depends on the other. If you want to know the influence between the variable X on variable Y, simple linear regression analysis used (Duli, 2019).

The simple regression analysis equations:

$$Y = a + bx$$

Y   = Dependent variable

a & b   = Constant parameter

X   = Independent variable

This regression simple linear analysis in this research consists of three tests; t–test, f–test, and coefficient determination.

To test the hypothesis, the researchers used criteria as follows: If the sig < 0,05, the H1 is accepted and the H0 is rejected, and the sig. > 0,05, the H0 is accepted, and the H1 is rejected, or if t – count > t – table, the H0 is rejected and H1 is accepted and vice versa; it is the came in the f –test. The coefficient determination is the value of R square. The process of calculating used SPSS 27 for Windows.

BAB IV

FINDINGS AND DISCUSSION

This chapter presented the findings and analysis to answer the research question of this research entitled "The Influence of Students' Motivation on Students' Achievement in Learning English Structure at the Four Semester English and Literature Department of UIN Alauddin Makassar". The X variable of this research is students' motivation. On the other hand, the Y variable of this research is students' achievement.

This chapter contains the findings and analysis of the student's motivation that was determining intrinsic motivation and extrinsic motivation as following the types of motivation by Ryan & Deci (2017), and the student's achievement in learning English structure (grammar) at the four-semester English and Literature Department of UIN Alauddin Makassar.

A. **Findings**

This research result obtained from the calculation of the student's motivation and students' achievement. The population of this research, as mentioned in the previous chapter, is the students who are in four-semester at the English and Literature Department of UIN Alauddin Makassar; the researcher used the technique of proportionate stratified random sampling in this research. Therefore, in this research, 23 students from the four-semester had researched on 12 - 13 May 2023 to collect the data. The research findings about the questioners

of students' motivation and the data on students' achievement have been analyzed:

1. The Analysis Descriptive Statistic of Data Respondent

The data respondents of this research consist of the semester, class, and sex. The respondent's answer is present in a table of distribution frequency and the percentage obtained with the formula:

$$P = \frac{f}{n} \: X \: 100 \: \%$$

P   : Percentage

f   : Class of frequency

n   : Total of sample

1.1.   The Semester of Respondent

The semester of the respondent is to find out the semester of the respondents in the English and Literature Department.

Table 4. 1 The distribution of the frequency of the semester repondent

The Semester's	F	%
Four semester	23	100%
Total	**23**	**100%**

(Source: The result of calculated the data primer, 2023)

According to table 4.1, present in this research, the respondent is the students in the four-semester with 23 students quantity and 100%. It is relevant to students who are in the process of learning English structure.

1.2. The Class of Respondent

The distribution of the class of respondents in this research presented in the table below:

Table 4. 2 The distribution of Frequncy of the Respondents Class

Class	f	%
4 AG 1	6	26%
4 AG 2	6	26%
4 AG 3	6	26%
4 AG 4	5	22%
Total	**23**	**100%**

(Source: The result of calculated the data primer, 2023)

Table 4.2 presents the class of respondents from four types. The three classes consist of 6 students, with each class having a percentage of 26%, and one class consisting of 5 students with a portion of 22%. The respondent of this research is the active students in their class.

1.3. The Sex of Respondent

The sex of this research present in table below:

Table 4. 3 The Distribution of Sex of the Respondents

Sex	f	%
Male	8	35%
Female	15	65%
Total	**23**	**100%**

(Source: The result of calculated the data primer, 2023)

Based on table 4.3 above that presents the sex of the respondents in this research, consisting of males and females. The male are eight quantity and 35% in percentage. The female is fifteen quantities with a portion of 65%.

2. The Analysis Descriptive Statistic of Data Research

This part describes the result of research that purposed to explain the discussion clearly. Descriptive data research informs the researcher about the condition of each variable that used the calculation of the category. The data research interpretation used a frequency distribution with the same interval, making the research easy.

The first step is calculates the respondent's questionnaire result in each variable. Then, make a category of the questionnaire results. The data research determined three category names; highest, medium, and lower. The last, the researcher determined the minimal score, maximum score, and interval that used the formula below:

- Maximum score : high score X total of questioners
- Minimum score : lower score X total of questioners
- Interval : Maximum score – Minimum score
- Range Interval : Interval – Total category

Therefore, after the researcher found the range interval in each category, the data of the questionnaires were classified into three categories according to the interval.

2.1.   Data Analysis of Variable X

Variable X of this research is students' motivation. To find out the statistical descriptive analyses of the research respondents in the variable students' motivation, the researcher determined the category with the rules of the Likert scale, explained in the previous chapter. The questionnaires consist of 20 questions (10 questions for intrinsic motivation and ten for extrinsic motivation) shared with 23 respondents, and 1 – 5 as a score of the questionnaires. 1: strongly disagrees, 2: disagree, 3: neutral, 4: agree, and 5: strongly agree.

The research calculated each variable's range of interval of the category with the way of below:

- Maximum score   = high score X total of questioners

    = 5 X 20

    = 100

- Minimum score   = lower score X total of questioners

    = 1 X 20

    = 20

- Interval   = Maximum score − Minimum score

$$= 100 - 20$$

$$= 80$$

- Range Interval   = Interval : Total category

$$= 80 : 3$$

$$= 27$$

Therefore, the range interval was getting to determine each category as follows:

Table 4. 4 Interpretation of the Category Variable X (Students' Motivation)

Score	Category
10 - 44	Lower
45 - 72	Medium
73 – 100	Highest

(Source: The result of calculated the data primer, 2023)

The answer of respondent presented in the table below:

Table 4. 5 The Answer of Respondent in Variable X

Students Motivation	f	%
Highest	15	65%
Medium	8	35%
Lower	0	0%
Total	**23**	**100%**

(Source: The result of calculated the data primer, 2023)

Based on the result of Table 4.5 above, the respondent's answer in the questionnaires about students' motivation (intrinsic and extrinsic), including in the highest category with fifteen students in 65% percentage. Then, the eight other students were in the medium class with a 35% percentage. No one of the students in a lower category.

The respondent is dominant in the highest category, with a total of fifteen students of twenty-three students or 65% in percentage. Because of that, the motivation for the student's achievement influenced learning English structure in the four-semester English and Literature Department.

There are the clasification of each questioners divided into five categories as follow the likert scale:

a) X.1: When learning grammar, I feel calm and happy.

Table 4. 6 Students motivation questionnaire 1

When learning grammar, I feel calm and happy.				
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Neutral	13	56,5	56,5	56,5
	Agree	7	30,4	30,4	87,0
	Strongly Agree	3	13,0	13,0	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 1 "When learning grammar, I feel calm and happy", there are 3 or 13% respondents strongly agree, 7 or 30% respondents agree, and 13 or 56% respondents neutral. It means, most of the respondents neutral of the feeling calm and

happy in learning grammar influenced the achievement in learning English structure.

b) X.2: The things I learned in grammar will be helpful in the future.

Table 4. 7 Students motivation questionnaire 2

The things I learned in grammar will be helpful in the future.				
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Neutral	3	13,0	13,0	13,0
	Agree	8	34,8	34,8	47,8
	Strongly Agree	12	52,2	52,2	100,0
	Total	23	100,0	100,0	

The result of questionnaire number 2 " The things I learned in grammar will be helpful in the future", show 12 or 52% respondents strongly agree, 8 or 35% respondents agree, and 3 or 13% respondents neutral. The result is most of the respondents strongly agree the grammar will be helpful for the future to influence their grammar achievement.

c) X.3: I feel satisfied and rewarded if I succeed in learning grammar.

Table 4. 8 Students motivation questionnaire 3

I feel satisfied and rewarded if I succeed in learning grammar.				
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Neutral	5	21,7	21,7	21,7
	Agree	7	30,4	30,4	52,2
	Strongly Agree	11	47,8	47,8	100,0
	Total	23	100,0	100,0	

The table above show the respondents in questionnaire 3, there are 11 or 48% respondent strongly agree, 7 or 30% respondents agree, and 5

or 22% repondents neutral. It means, most of them strongly agree the questionnaire three influenced the students motivation in learning English structure or grammar.

d) X.4: Learning grammar is the same as challenging myself.

Table 4. 9 Students motivation questionnaire 4

Learning grammar is the same as challenging myself.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Neutral	3	13,0	13,0	13,0
	Agree	12	52,2	52,2	65,2
	Strongly Agree	8	34,8	34,8	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 4, there are 8 or 35% respondents strongly agree, 12 or 52% respondents agree, and 3 or 13% respondents neutral. It means, most of the respondents agree that questionnaire influence the achievement in learning English sturcture.

e) X.5: I have a great interest in learning grammar.

Table 4. 10 Students motivation questionnaire 5

I have a great interest in learning grammar.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Disagree	3	13,0	13,0	13,0
	Neutral	9	39,1	39,1	52,2
	Agree	10	43,5	43,5	95,7
	Strongly Agree	1	4,3	4,3	100,0
	Total	23	100,0	100,0	

The result of questionnaire number 5 " I have a great interest in learning grammar", show 1 or 4% respondents strongly agree, 10 or 44%

respondents agree, 9 or 39% respondents neutral, and 3 or 13% respondents disagree. The result is most of the respondents agree the great interest learning influenced their grammar achievement.

f) X.6: Through studying, I like to learn many new things.

Table 4. 11 Students motivation questionnaire 6

Through studying, I like to learn many new things.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Disagree	1	4,3	4,3	4,3
	Neutral	7	30,4	30,4	34,8
	Agree	9	39,1	39,1	73,9
	Strongly Agree	6	26,1	26,1	100,0
	Total	23	100,0	100,0	

The table above show the respondents in questionnaire 6, there are 6 or 26% respondent strongly agree, 9 or 39% respondents agree, 7 or 30% repondents neutral, and 1 or 4% disagree. It means, most of them agree the question six influenced the students motivation in learning English structure or grammar.

g) X.7: When I complete a grammar assignment, I understand it very well.

Table 4. 12 Students motivation questionnaire 7

When I complete a grammar assignment, I understand it very well.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Disagree	2	8,7	8,7	8,7
	Neutral	13	56,5	56,5	65,2
	Agree	8	34,8	34,8	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 7, there are 8 or 35% respondents agree, 13 or 57% respondents neutral, and 2 or 9% respondents disagree. It means, most of the respondents neutral that questionnaire influenced the achievement in learning English sturcture.

h) X.8: I am responsible if I succeed in learning grammar.

Table 4. 13 Students motivation questionnaire 8

I am responsible if I succeed in learning grammar.

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Neutral	16	69,6	69,6	69,6
	Agree	5	21,7	21,7	91,3
	Strongly Agree	2	8,7	8,7	100,0
	Total	23	100,0	100,0	

The result of questionnaire number 8 " I am responsible if I succeed in learning grammar", show 2 or 9% respondents strongly agree, 5 or 22% respondents agree, and 16 or 70% respondents neutral. The result is most of the respondents neutral the succeed learning in grammar influenced their grammar achievement.

i) X.9: Learning grammar will make me know how far I can improve my grammar skills.

Table 4. 14 Students motivation questionnaire 9

Learning grammar will make me know how far I can improve my grammar skills.

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Neutral	2	8,7	8,7	8,7
	Agree	11	47,8	47,8	56,5
	Strongly Agree	10	43,5	43,5	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 9, there are 10 or 43% respondents strongly agree, 11 or 48% respondents agree, and 2 or 9% respondents neutral. It means, most of the respondents agree the questionnaire influenced the achievement in learning English sturcture.

j) X.10: I like and enjoy solving complicated grammar tasks.

Table 4. 15 Students motivation questionnaire 10

		Frequency	Percent	Valid Percent	Cumulative Percent
I like and enjoy solving complicated grammar tasks.					
Valid	Disagree	1	4,3	4,3	4,3
	Neutral	15	65,2	65,2	69,6
	Agree	4	17,4	17,4	87,0
	Strongly Agree	3	13,0	13,0	100,0
	Total	23	100,0	100,0	

The table above show the respondents in questionnaire 10, there are 3 or 13% respondent strongly agree, 4 or 17% respondents agree, 15 or 65% neutral, and 1 or 4% repondents disagree. It means, most of them neutral of that questionnaire influenced the students motivation in learning English structure or grammar.

k) X.11: It feels perfect when I can achieve the goals set in learning grammar.

Table 4. 16 Students motivation questionnaire 11

It feels perfect when I can achieve the goals set in learning grammar.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Disagree	1	4,3	4,3	4,3
	Neutral	7	30,4	30,4	34,8
	Agree	12	52,2	52,2	87,0
	Strongly Agree	3	13,0	13,0	100,0
	Total	23	100,0	100,0	

The result of questionnaire number 11, show 3 or 13% respondents strongly agree, 12 or 52% respondents agree, 7 or 30% respondents neutral, and 1 or 4% respondent disagree. The result is most of the respondents agree the grammar goals influenced their grammar achievement.

l) X.12: I study grammar to get an A score.

Table 4. 17 Students motivation questionnaire 12

I study grammar to get an A score.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Strongly Disagree	1	4,3	4,3	4,3
	Disagree	2	8,7	8,7	13,0
	Neutral	5	21,7	21,7	34,8
	Agree	8	34,8	34,8	69,6
	Strongly Agree	7	30,4	30,4	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 12 "I study grammar to get an A score", there are 7 or 30% respondents strongly agree, 8 or 35% respondents agree, 5 or 22% respondents neutral, 2 or 9% respondents disagree, and 1 or 4% respondent strongly diasgree. It means,

most of the respondents agree the an A score in learning grammar influenced the achievement in learning English sturcture.

m) X.13: Success in learning grammar is when I can have more or the same ability as other students.

Table 4. 18 Students motivation questionnaire 13

		Frequency	Percent	Valid Percent	Cumulative Percent
Success in learning grammar is when I can have more or the same ability as other students.					
Valid	Disagree	1	4,3	4,3	4,3
	Neutral	9	39,1	39,1	43,5
	Agree	12	52,2	52,2	95,7
	Strongly Agree	1	4,3	4,3	100,0
	Total	23	100,0	100,0	

The table above show the respondents in questionnaire 13, there are 1 or 4% respondent strongly agree, 12 or 52% respondents agree, 9 or 39% repondents neutral, and 1 or 4% respondent disagree. It means, most of them agree the questionnaire 13 influenced the students motivation in learning English structure or grammar.

n) X.14: I want to pass on learning grammar to have an excellent GPA.

Table 4. 19 Students motivation questionnaire 14

		Frequency	Percent	Valid Percent	Cumulative Percent
I want to pass on learning grammar to have an excellent GPA.					
Valid	Disagree	2	8,7	8,7	8,7
	Neutral	7	30,4	30,4	39,1
	Agree	9	39,1	39,1	78,3
	Strongly Agree	5	21,7	21,7	100,0
	Total	23	100,0	100,0	

The result of questionnaire number 14, show 5 or 21% respondents strongly agree, 9 or 40% respondents agree, 7 or 30% respondents neutral, and 2 or 9% respondents disagree. The result is most of the respondents agree questionnaire 14 influenced their grammar achievement.

o) X.15: I thought about what grades and rewards I would get when learning grammar.

Table 4. 20 Students motivation questionnaire 15

I thought about what grades and rewards I would get when learning grammar.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Strongly Disagree	1	4,3	4,3	4,3
	Disagree	2	8,7	8,7	13,0
	Neutral	11	47,8	47,8	60,9
	Agree	7	30,4	30,4	91,3
	Strongly Agree	2	8,7	8,7	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 15, there are 2 or 9% respondents strongly agree, 7 or 30% respondents agree, 11 or 48% respondents neutral, 2 or 9% respondents disagree, and 1 or 4% respondent strongly disagree. It means, most of the respondents neutral the grades and reward in learning grammar influenced the achievement in learning English sturcture.

p) X.16: I learn English structure to improve my grammar skills.

Table 4. 21 Students motivation questionnaire 16

		Frequency	Percent	Valid Percent	Cumulative Percent
I learn English structure to improve my grammar skills.					
Valid	Neutral	4	17,4	17,4	17,4
	Agree	12	52,2	52,2	69,6
	Strongly Agree	7	30,4	30,4	100,0
	Total	23	100,0	100,0	

The table above show the respondents in question 16, there are 7 or 30% respondent strongly agree, 12 or 52% respondents agree, and 4 or 17% repondents neutral. it means most of them agree the questionnaire six-teen influenced the students motivation in learning English structure or grammar.

q) X.17 : I study grammar to get praise from my parents and friends.

Table 4. 22 Students motivation questionnaire 17

		Frequency	Percent	Valid Percent	Cumulative Percent
I study grammar to get praise from my parents and friends.					
Valid	Strongly Disagree	1	4,3	4,3	4,3
	Disagree	4	17,4	17,4	21,7
	Neutral	10	43,5	43,5	65,2
	Agree	4	17,4	17,4	82,6
	Strongly Agree	4	17,4	17,4	100,0
	Total	23	100,0	100,0	

The result of questionnaire number 17, show 4 or 17% respondents strongly agree, 4 or 17% respondents agree, 10 or 44% respondents neutral, 4 or 17% respondents disagree, and 1 or 4% respondent strongly

disagree. The result is most of the respondents neutral for this questionnaire influenced their grammar achievement.

r) X.18: I was very motivated to learn grammar because of my previous grades.

Table 4. 23 Students motivation questionnaire 18

I was very motivated to learn grammar because of my previous grades.				
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Disagree	4	17,4	17,4	17,4
	Neutral	8	34,8	34,8	52,2
	Agree	9	39,1	39,1	91,3
	Strongly Agree	2	8,7	8,7	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 18, there are 2 or 9% respondents strongly agree, 9 or 40% respondents agree, 8 or 35% respondents neutral, and 4 or 17% respondents disagree. It means, most of the respondents agree with this questionnaire influenced the achievement in learning English sturcture.

s) X.19: I enjoy participating in the learning process of English structure (e.g., helping a friend struggling to complete a task in front of the class).

Table 4. 24 Students motivation questionnaire 19

I enjoy participating in the learning process of English structure (e.g., helping a friend struggling to complete a task in front of the class).				
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Neutral	8	34,8	34,8	34,8
	Agree	12	52,2	52,2	87,0
	Strongly Agree	3	13,0	13,0	100,0
	Total	23	100,0	100,0	

The table above show the respondents in questionnaire 19, there are 3 or 13% respondent strongly agree, 12 or 52% respondents agree, and 8 or 35% repondents neutral. It means, most of them agree the questionnaire 19 influenced the students motivation in learning English structure or grammar.

t) X.20: I want to show others that I am also capable of learning grammar.

Table 4. 25 Students motivation questionnaire 20

I want to show others that I am also capable of learning grammar.				
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Disagree	1	4,3	4,3	4,3
	Neutral	9	39,1	39,1	43,5
	Agree	11	47,8	47,8	91,3
	Strongly Agree	2	8,7	8,7	100,0
	Total	23	100,0	100,0	

Based on table above the result of questionnaire number 20 "I want to show others that I am also capable of learning grammar", there are 2 or 9% respondents strongly agree, 11 or 48% respondents agree, 9 or 39% respondents neutral, and 1 and 4% respondent disagree. It means, most of

the respondents agree the ability in learning grammar influenced the achievement in learning English sturcture.

2.2. Data Analysis of Variable Y

The Variable Y of this research is students' achievement in learning English structure. It found in the first part of the questionnaires that respondents submitted. The category of the students' achievement determines according to the rules of achievement category in the academic portal of UIN Alauddin Makassar. The students who are in the achievement 3,56 – 4,00 (A/A-), it means excellent achievement (highest), and for the students who are in the achievement 2,51 – 3,55 (B-, B, B+), it means good achievement (medium), and also the students who are in achievement score equal or less than 2,50 it means enough or lower achievement.

Table 4. 26 Students' Achievement in Learning Grammar

Students Achievement	f	%
Highest	15	65%
Medium	8	35%
Lower	0	0%
Total	23	100%

(Source: The result of calculated the data sekunder, 2023)

Table 4.7 above presents fifteen students, or 65%, in four semesters who had high scores or outstanding achievements in learning English structure, and there are eight students, or 35%, in four semesters who had good achievements in learning English structure.

After determining the data on students' achievement in semester four in learning English structure, the data had to analyse in SPSS 27 program. The result of the data and interpretation presented in the following section.

3. The Statistic Analysis of Data Research

This part analyzes the score of students' motivation and students' achievement using Simple linear regression analysis. This analysis is to answer the research question and examine the hypotheses. Before examination, the data need to have a normal distribution. The researcher had done the normality test that presented in this part.

3.1. Normality Test

Normality test is a requirement for parametric tests, as explained in the previous chapter. The test of data used Kolmogorov – Smirnov test in SPSS 27 program.

Table 4. 27 The Result of the Normality Test

One-Sample Kolmogorov-Smirnov Test

			Unstandardized Residual
N			23
Normal Parameters[a,b]	Mean		,0000000
	Std. Deviation		,33604385
Most Extreme Differences	Absolute		,155
	Positive		,124
	Negative		-,155
Test Statistic			,155
Asymp. Sig. (2-tailed)[c]			,163
Monte Carlo Sig. (2-tailed)[d]	Sig.		,159
	99% Confidence Interval	Lower Bound	,150
		Upper Bound	,169

a. Test distribution is Normal.

b. Calculated from data.

c. Lilliefors Significance Correction.

d. Lilliefors' method based on 10000 Monte Carlo samples with starting seed 2000000.

The data is normally distributed if the significance value is greater than 0,05 (Duli, 2019). According to Table 4.8 above, the significance 0,163 > 0,05, which means the significance value is greater than 0,05, indicates the data had a normal distribution and can continue to do the following analysis.

3.2. Simple linear regression analysis

To answer the research question and examine the hypotheses of this research, the researcher analyzed the study's result or the respondents' data using simple linear regression analysis.

This simple linear regression is to know how much the influence of students' motivation on students' achievement. Then, the t–test is to see the influence of students' motivation on students' achievement in learning English structure and to test the hypotheses. The next test is the F – test, which decides the significance level of students' motivation to students' achievement in learning English structure. The last is a coefficient determination to know how much the percentage of the influence of students' motivation on students' achievement in learning English structure.

There is the result of Simple linear regression analysis:

Table 4. 28 The t – test

Coefficients^a

Model		Unstandardized Coefficients		Standardized Coefficients		
		B	Std. Error	Beta	t	Sig.
1	(Constant)	1,269	,329		3,861	,001
	Motivation	,462	,091	,742	5,071	,000

a. Dependent Variable: Achievement

Based on table above the value of constanta (a) is 1,269, and then calculated into the formula as follow:

$$Y = 1,269 + 0,462 \ (X)$$

The result of the formula is; First, the value of a constant is 1,269, which means if students' motivation is null, the student's achievement will be minus 1,269. Second, the value of the beta coefficient is 0,462 in the favourable position, which shows the positive relation between students' achievement and motivation. Third, the coefficient 0,462 had a meaning if the students' motivation rises by 1%, it influenced the students' achievement in the amount of 0,462.

Table 4.9 above also contains the result of t–test. Based on Duli (2019), if the significance value < 0,05 or t – count > t – table, the variable X influence variable Y and vice versa. t – table of this analysis is:

$$
\begin{aligned}
\text{t – table} \quad &= (0,05 : K) : (N – K) \\
&= (0,05 : 2) : (23 – 2) \\
&= 0,025 – 20 \\
&= 2,086
\end{aligned}
$$

The hypotheses of this research are:

H0: There is no influence of motivation on student achievement in learning English structure in the four-semester English and Literature Department.

H1: There is an influence of motivation on student achievement in learning English structure in the four-semester English and Literature Department.

The significance of students' motivation is 0,000 less than 0,05 (0,000 > 0,05), and the t – count is greater than the t – table (5,071 > 2,086). In other words, there is an influence of students' motivation to students' achievement in learning English structure.

Based on the result of t–test so, H1 is accepted, and H0 is rejected. The alternative hypothesis is accepted, and the null hypothesis is rejected to test both variables. The hypotheses test presented there is a significant influence of students' motivation on students' achievement.

Table 4. 29 The F – test

ANOVA[a]

Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	,153	1	,153	25,711	,000[b]
	Residual	,125	21	,006		
	Total	,277	22			

a. Dependent Variable: Achievement

b. Predictors: (Constant), Motivation

The F – test result or table of test annova is to know the value or linearity of the regression. According to Duli (2019), the rule of the annova test is if the significance value is less than 0,05 (Sig. < 0,05) or f – count is greater than f – table (f – count > f table), it means this research is significant. The value of the f – table in this research are:

$$f - table = K : (N-K)$$

$$= 2 : 21$$

$$= 3,47$$

Table 4.10 shows the significance value is 0,000, and the f – count is 14,438. It is a mean significance value less than 0,05 (0,000 < 0,05) and f – count greater than f – table (25,711 > 3,47). In other words, the student's motivation and achievement are linear; it can be concluded that the relation between students' motivation (X) to students' achievement has a positive direction.

Table 4. 30 Coeficcient Determination

Model Summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	,742[a]	,550	,529	,07703

a. Predictors: (Constant), Motivation

Table 4.11 above shows the result of coefficient determination to know how much the percentage of students' motivation to students' achievement. Based on the table above, the adjusted R square is 0,550, which means the student's motivation, which is intrinsic motivation, and extrinsic motivation has a significant effect on students' achievement in a percentage of 55%.

B. Discussion

This research purposed to determine the influence of motivation on students' achievement in learning English structure at the four semesters of UIN Alauddin Makassar. This research consisted in two variables that are students' motivation (X) and students' achievement (Y). The method of this research is quantitative descriptive with simple linear regression analysis as the technique of analysis data.

The data obtained as follows the result of the share questioners used Google Forms to 23 respondents that are students at the four-semester English and Literature Department of UIN Alauddin Makassar. The respondents who had filled out the questionnaires were students in the class for four semesters that used proportionate stratified random technique sampling. There are four classes in the four semesters, and because of that, the respondent consists of six to five students in each category.

Students' achievement is the value of the students in the learning process with the teacher in class based on the curriculum at a particular time; that process consists of knowledge, skills, abilities, attitudes, and others (Tian & Sun, 2018). According to Özen (2017), several factors affect the student's achievement, such as emotions, self-worth, social adaptation, learning styles, motivation, expectations, and many others.

This research used students' motivation according to the theory of Ryan & Deci (2017), which determines students' motivation into intrinsic and extrinsic

motivation. The intrinsic motivation describes the motivation of the students for their own self to influence their achievement in learning English structure, and the extrinsic motivation describes the motivation of the students in learning English structure because of the awards that they will get, which is it influences the student achievement in learning English structure. Based on the result of t–test, there is a significant influence of student motivation on students' achievement. That is from calculating the significance value and t – count. The significance value of students' motivation is 0,000 less than 0,05, and the t – count of 5,071 is greater than 2,086, which means there is a significant influence of students' motivation on students' achievement. So, the H1 is accepted, and the H0 is rejected.

The researcher found in the question number two "The things I learned in grammar will be helpful in the future", this question is intrinsic motivation with the summary score 101 or the most high it show the desire of the students in learning English structure because they know the benefit of learning grammar for their own self. In the other side, the question number six-teen "I learn English structure to improve my grammar skills", the extrinsic motivation question had highest score (95), it show the output of learning English structure influenced the students achievement in learning English structure. This statement is related to the Choosri & Intharaksa (2011) Internal and External motivation directly influences students' achievement because they help students have the desire and effort to achieve their goals.

The result of this research presents the students' motivation influencing the students' achievement in learning English structure at the four-semester English and Literature Department of UIN Alauddin Makassar. It supported the explanation by Özen (2017), who states there are several factors influence the students' achievement as follows school leadership, motivations, behaviours, emotions, expectations, self-concept, self-composition, locus of power, socioeconomic class, school environment, school climates, teacher collective efficacy, self-worth, social adaptation, parental participation, purpose orientation, and types of learning styles. In the same way, Boo Wong in Paramitha (2017) said the students' motivation influenced the student's achievement in learning English.

The result of this research similar with the research by Abu Bakar (2022) who stated that students' motivation influenced academic student achievement and had a beneficial effect on the student's academic performance. Based on the result of the coefficient determination, the student's motivation is 55% percentage to influence students' achievement and 45% influenced by other factors.

The result of questionnaires in this research is the intrinsic motivation score more than the extrinsic motivation, it means the intrinsic motivation is the dominant motivation in influenced the students achievement in learning English structure. That result same with the study by Paramitha (2017), in her research she explained that student's motivation consist the intrinsic motivation and

extrinsic motivation. Both of motivations influenced the students' achievement in learning English and the dominant motivation is intrinsic motivation. The research by Riswanto & Aryani (2017) presented if the students have good achievements, they have good motivation. That statement can be seen in the questionnaires "I study grammar to get an A score" and "I want to pass on learning grammar to have an excellent GPA" most of the students' agree with this questionnaires. Therefore, the extrinsic motivation can be influenced the students achievement.

CHAPTER V

CONCUSIONS AND SUGGESTIONS

A. Conclusion

Based on the explanation in the previous chapter, the researcher concludes that there is a significant influence of students' motivation on students' achievement in learning English structure. After analyzing students' motivation (intrinsic and extrinsic) and achievement by t–test, the significance value of students' motivation is 0,000. It means students' achievement influences the student's motivation. Furthermore, the determination test found that students' motivation influenced by 55% of students' achievement and 45% by other factors.

Therefore, in this research, an alternative hypothesis (H1) is accepted, and the null hypothesis (H0) is rejected. In other words, there is an influence of students' motivation students' achievement in learning English structure at the four-semester English and Literature Department of UIN Alauddin Makassar.

B. Suggestion

Based on the conclusion of this research, the researcher would like to offer suggestions:

1. For the lecturer, the researcher suggests that teachers or lecturers to develop students' motivation to learn English structure in way: if the students learning English structure, they will get the benefit in the future for their self, also it can improve their ability in grammar.

2. For the student, the researcher hopes that with this research, the readers or students be aware: if the better motivation in learning English structure can influenced their achievement in grammar subject.

3. For the next researcher, the researcher suggests to analyzed more about the students motivation in factor of awarners the knowledge, also in the learning environment, and not limit the population but increase it to more big population.

BIOGRAPHY

Mawaddah Warahmah was born in Sinjai, South Sulawes, on 15 January 2002. She is the first child of two siblings by her parents Hada and Marta. She started her study at TK Pertiwi Bonto Salama in 2007, next to the SD 72 Tengnga Lembang and graduated in 2013. Then continued to junior high school at the SMPN 18 Sinjai and finished in 2016. After that, she continued to senior high school at SMKN 1 Sinjai and graduated in 2019. During those years, she takes to study at the Alauddin State Islamic University of Makassar in the English and Literature Department. If you want to discuss more about her research, you can contact her at mwdahwrhmh@gmail.com.
