ACKNOWLEDGMENTS

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

Alhamdulillah Rabbil Alamin, the researcher would like to express her deepest gratitude to the almighty Allah SWT., the only provider, the most merciful who gives her guidance, inspiration, and good health for all time to conduct the writing of this thesis. Also, shalawat and greetings are always delivered to our great Prophet *Muhammad Shollallahu Alaihi Wasallam.*, who has brought us from the darkness to the lightness, from the bad moral to the good moral, and from the Jahiliyah era to the Islamiyah era.

During the writing of the thesis, the researcher received much assistance from several people, for their valuable guidance, correction, suggestion, advice, and golden support. Without them, the writing of this thesis would never be possibly completed. Therefore, the researcher would like to express the greatest thanks and appreciation for those people, especially to:

1. The Researcher's father, **Andi Bachtiar Alie, Be.**, and her lovely mother **Andi Junasibah, S.Pd.**, who always pray, encourage, educate, and provide countless material supports, so that, she could finish this thesis writing and her study at UIN Alauddin Makassar. Big thanks to them who always give the Researcher the best support.

2. **Dr. Prof. H. Hamdan Juhanis, M.A., Ph.D.**, as a Rector of State Islamic University Alauddin Makassar who has led this university as well.
3. **Dr. H. Andi Achruh, M.Pd.I.**, the Dean of Tarbiyah and Teaching Science Faculty of Alauddin State Islamic University of Makassar.
4. **Dr. Sitti Nurpahmi, S.Pd., M.Pd.**, the Head of English Education Department, Tarbiyah and Teaching Science Faculty of Alauddin State Islamic University of Makassar and all of the staff of hers.
5. **Nur Aliyah Nur, M.Pd.**, the secretary of English Education Department, Tarbiyah and Teaching Science Faculty of Alauddin State Islamic University of Makassar.
6. **Dr. Sitti Nurpahmi, S.Pd., M.Pd.**, the researcher's first consultant who has always give suggestion and advice to success and finishing this thesis.
7. **Andi Asmawati, S.Pd., M.Pd.**, the researcher's second consultant who have helped, guide, and supported the researcher during the writing of Her thesis.
8. **Dr. H. Abdul Muis Said, M.Ed., TESOL**, the researcher's first Examiner, who have always suggested, and give the best contribution in the process of finishing this thesis.
9. **Multazam Abubakar, M.Hum.**, the researcher's second Examiner, who have always give the best contribution and the time, in the process of improving this thesis.

10. The most thanks for all lecturer of English Education Department and all the staffs of Tarbiyah and Teaching Science Faculty who has always help in term of academics or graduation requirements at Alauddin State Islamic University of Makassar.
11. **St. Rugayyah, S.Pd.**, as the English teacher at MTs Madani Alauddin Pao – Pao and all students of class VIII-B MTs Madani Alauddin Pao - Pao, who have assisted researcher in the success of this thesis research process.
12. The Researcher beloved Brother and Sister, **Andi Ashry Shafour, S.Kom., Andi Shafira Ayu Wahyuni, S.M., and Andi Priya Arovah** who always support the researcher to conduct this research.
13. The Researcher family, it cannot be mentioned one by one overall thank you for the supports and prayers for her.
14. The researcher's big family in English Education Department (S17VERTEEN), specially PBI 3 and 4 in Academic Year 2017 that taught me about togetherness and solidarity.
15. The people that researchers are not mention in this acknowledgment but always give support and good pray.

In this thesis, the researcher is aware that many deficiencies and not as impeccable as expected, there are still many mistakes, and become a lesson to always be careful in doing the thesis. But, as we know people will always escape from mistakes because perfection only belongs to Allah SWT. Therefore,

suggestions and criticisms are required by researchers to be able to increase their thesis properly.

Gowa, 17 Juli 2024

Researcher,

Andi Azizah Ade Zhuhrani

Title : The Effect Of Using Duolingo on Students Learning Vocabulary Experiences
Consultant I : Dr. Sitti Nurpahmi, S.Pd., M.Pd
Consultant II : Andi Asmawati S.Pd., M.Pd

Duolingo is an application designed to help people learn languages easily and comfortably. This application allows people to learn various languages, and among them is English. The author focuses on the influence of the Duolingo application on the learning experience. Therefore, this research is to determine the effect of using Duolingo on the students' vocabulary learning experiences. This research was carried out at MTs Madani Alauddin Pao-Pao and involved 10 students in grades VIII – B.

The method used by researcher in this researcher is a quantitative method and a quasi-experimental design. For research instruments, researcher used questionnaires and test as research instruments. The use of research methods and instruments can provide appropriate research results.

The findings from the results of this research are that researcher found that there was a significant influence of using Duolingo on students' vocabulary learning experience where the contribution of using Duolingo was 42.2% and the correlation coefficient was high (0.650). Therefore, H₀ is rejected and H₁ is accepted. This means that there is an influence of using Duolingo in improving students' vocabulary learning experience. Using Duolingo has the effect of motivating students' to carry out common vocabulary activities.

Based on the research results obtained, the researcher stated that the implication of this research is that in teaching and learning activities, especially vocabulary, teachers of lecturers can use Duolingo as a learning method so that students are interested in learning English. For future researchers, because this research contributes to enriching students' vocabulary learning experiences, researchers must be innovative in teaching students. For students, students must be able to identify the effects of using Doulingo in their vocabulary learning experience, and apply it in the learning process.

CHAPTER I

INTRODUCTION

A. Background

Humans are social creature, and thus, they need to interact one to another. This interaction can only be possible if those participating communicate one another. In Webster's New College Dictionary, communication is defined as a process by which information is exchange between individual through a common means of communication is language. In this interaction, language is used to express thoughts, ideas, and feelings. Language makes interaction and communication run smoothly. Language is an instrument and it will connect us to people around us.

According to Pateda (2018), language is sounds issued by means of human speech that has meaning. Communication consists of two parts, verbal communication and non-verbal communication. Non-verbal communication is a communication without sound such as, hand movements, signs and so on.

Verbal communication is a communication in which language is used as the instrument even spoken or written (Chaer & Agustina 2010:20). Due to increase communication among people from different places of origins and linguistic background there is a need to agree on international language as a

means of communication. In other word, language has an important rule for human life. English has been the most important language in international communication. The people from all over the world speak the language when they meet international meetings, workshops, or conferences.

Most countries in the world have set the language as one of the compulsory subjects studied at schools. English is a subject in school curriculum of school that must be taught by the teacher. Although it is a foreign language, the students have to master that language in order to develop their skills and reach their dreams in future. In English there are four skills to be learned, they are listening, speaking, reading and writing. Beside the four skills, English has some aspects which can be taught to the students. Those aspects are, vocabulary, pronunciation, and grammar. They are called language aspects. In order to learn English well, both the language skills and language aspects are interrelated each other. Teaching English in Indonesia is not an easy job.

There are many problems in teaching English. First, the understanding of most of the students are English is a hard subject to learn. However, it have an effect in students willingness of learning English. Second the condition of the students who are lack of vocabulary that will make them unable to understand in learning English. Third, the students often speak their mother-tongue language, which is it makes them are unaccustomed with English.

Teaching English needs a method to activate and improve the students ability of four skills in English, which are most important to the English teacher find solutions by creating efficient and effective technique, even find some way to make the learning process English are going to be fun (Pateda, 2018).

One of the effective medium for teaching is Duolingo application. Duolingo is important to provide effective and best lessons for students. Effective Duolingo will provide good and fun knowledge for them, so that it will provide many benefits in the future and this is also stated in the following hadith.

مَنْ أَرَادَ الدُّنْيَا فَعَلَيْهِ بِالْعِلْمِ، وَمَنْ أَرَادَ الْآخِرَةَ فَعَلَيْهِ بِالْعِلْمِ، وَمَنْ أَرَادَهُمَا فَعَلَيْهِ بِالْعِلْمِ

Meaning : "Whoever wants the world, then let him master the knowledge. Whoever wants the afterlife, let him master knowledge. And whoever wants both (the world and the hereafter), let him master knowledge." (HR. Ahmad)

Teacher have to follow the modern era, the era when everything are easy to find by internet, the era when students can learn about something anywhere and anytime they want by using application in Smartphone. The students in this era are very accustomed with Smartphone, they even are smarter and know how to use Smartphone than the old people. This moment, are good to be use by teacher in increase the student willingness in learning English.

Duolingo is really applicable to maintain the students' capacity to work and learn in fun situation. That is why in this research, the researcher provides the way to achieve learning objectives. Duolingo presents the new idea in learning. Therefore, this study assumes that Duolingo will help students in their experience.

Learning English by using application is one of the best ways to them interest in learning. They did not have to sit in the class when they want to learn English, they can learn in everywhere and everyday. Duolingo is an application designed to help people learn languages easily and comfortably but rather just having fun with one more game or application on people device. The application allows people to learn a lot of different language, and of them are English. This writer focused on the effect of Duolingo application on learning experiences.

B. Research Questions

Based on the fundamental statements above, the researcher formulates the research question that is there any effect of using Duolingo on students' learning vocabulary experience?

C. Research Objectives

The objective of this research is to find out the effect of using Duolingo on students' learning vocabulary experience.

D. Research Significances

This study tries to determine whether the students' experience in using Duolingo on vocabulary. The research results are expected to:

a. For the Teachers

By understanding the results of this study, teachers can be careful in choosing Duolingo strategies in their classrooms. It is hoped that the results of this study can help teachers to find out how to increase students' experience in teaching vocabulary.

b. For the Students

From the results of this study, students are expected to be able to increase their experience in teaching vocabulary in accordance with the teaching performance without ignoring other ethics as a student.

c. For other Researchers

The results of this study can be used as a reference for further research in developing problems regarding using Duolingo and student's experience. It is hoped that the data can open the minds of other researchers in completing field research. Therefore, other researchers will get good results related to building students' experience on teaching vocabulary.

E. Research Scope

The scope of this research will focus on students' experiences. Students' experiences are limited by using Duolingo. The researcher wants to know the contribution of using Duolingo on teaching vocabulary.

F. Operational Definition of Terms

In order to know the term used in this research clearly, the researcher defines those terms as follows:

a. Students' Experience

Students' experience is moments of learning that are carried out by students in the process of receiving and transforming their knowledges.

b. Duolingo

Duolingo is an interesting and fun application because it is a gamification application, meaning users can learn English like playing a game because this application uses audio-visual methods in learning.

c. Vocabulary

Vocabulary is a set of words which is used to build the sentences and their meaning.

CHAPTER II

REVIEW OF RELATED LITERATURE

a. Literature Review

1. Review of Related Research Finding

Some researchers have conducted some studies relating to the position of Duolingo in students' experience.

Nasrul (2023) reviewed about the effect of using Duolingo application on students' English learning vocabulary enrichment: an experimental research at SMKN 1 Padang. This research aimed to determine the effect of using Duolingo application on English learning vocabulary enrichment for the 10th grade students at SMKN 1 Padang. The results of the study used IBM SPSS statistics 29.0.1.0. and also paired sample t-test formula was used by researcher to analyze the data. In addition to this result, using the Duolingo application had significant effect for the 10th grade students on English vocabulary enrichment in teaching-learning activities in classroom.

Gangaiamaran and Pasupathi (2022) in their research about "Review on Use of Mobile Apps for Language Learning". They found that mobile devices provide plenty of resources to develop the listening skill of the learners who can be exposed to authentic material like live streams, English songs, radio, listening to English news. The research classified the mobile apps with the objective of aiding the English language learners to choose the suitable app.

The categorization of apps can enhance the use of mobile learning in acquiring different skills in of language.

The similarity of this present study with them is the researches used Duolingo as variable. The differences are this study specifically focused on effect of Duolingo on students' experience in learning vocabulary. This study specifies the position of Duolingo through vocabulary as one of the effective applications.

2. Pertinent Ideas

a. Duolingo

1. The Definition of Duolingo

Nowadays, the development of technology is increasing significantly. The inventions of it are inevitable and give a huge change in our life, such as in industrial, communicational, and also educational aspects. In education, the tradition of teaching is changing drastically because of the entry of technology. It helps the teacher in their teaching, assessing, evaluating, and many other activities (Castro, 2016). Technology such as computer and smartphone can also put a role in education as a media. Media is anything that carries on information to ease the communication between the source and the receiver in learning. Media is divided into three, text, audio, and visual. Those are used as the tools in learning in order to make it easier, not boring, and become more active.

The technology which is used as a media is called digital media, the newest media today. According to Shelly (2010), what it means by digital media is any computer-based presentation or application software that uses multimedia element. He also argued that the best strategy for curriculum integration is to put technology into the hands of trained teachers, make it easily accessible, and let them decide how best to use it at the point of instruction in their classroom. The point of Shelly's statement is that using technology in teaching should be handled well by the teacher, and more importantly, the use of it should be under the guidance of the teachers' instruction.

In vocabulary teaching, to increase the amount of vocabulary and its knowledge for the students, we as a teacher can take advantages from using media. There are many media that teacher can use, one of them is Duolingo application. Duolingo launched in June 2012. It is a game-based platform for learning foreign languages. It consists of two major components: grammar and vocabulary exercises. It was created by Luis von Ahn, PhD, and Severin Hacker, PhD. With over 50 million app downloaders and more than 100 million learners, Duolingo has recently become the most popular way to learn languages online (Magnuson, 2014)

Duolingo is a free language-learning platform that includes a language-learning website and app, as well as a digital language proficiency

assessment exam. As of January 2019, the language-learning website and app offer 85 different language courses in 24 languages. The app has about 200 million registered users across the world (source by Duolingo). Duolingo is an application designed to help people learn languages easily and comfortably, so that doing so doesn't feel like people studying, but rather just having fun with one more game or application on people's android device. The application allows people to learn a lot of different languages, such as Spanish, English, French, Italian or Portuguese. People just have to choose the language that they want to learn the first time they use the application.

Duolingo is an application service service headquartered in Pittsburgh, PA, U.S. it was launched on November 30,2011, by Luis von Ahn and his graduated students Severin Hacker and then developed along with Antonio Navas, Vicki Cheung, Marcel Uekerman, Brendan Meeder, Hector Villafuerte, and Jose Fuentes. Inspiration for Duolingo came from two places. Luis Van Ahn wanted to create another program that served two purposes in one, what he calls a "twofer". Duolingo originally did this by teaching its users a foreign language while having them translate simple phrases in documents, though the translation feature has since been removed. Von Ahn was born in Guatemala and saw how expensive it was for people to learn English. Severin hacker (born in Zug, Switzerland), co-founder of Duolingo, and Von Ahn

believe that “free education will really change the world” and wanted to supply the people an outlet to do so (Munday, 2018).

The project was originally sponsored by Luis von Ahn’s MacArthur fellowship and a National Science Foundation grant. Additional funding was later received in the form of investments from Union Square Ventures and actor Ashton Kutcher’s firm, A-Grade investments. Duolingo started its private beta on November 30, 2011, and accumulated a waiting list of more than 300,000 users. On June 19, 2012, Duolingo launched for the general public. Due to popular interest, Duolingo received many investments including a \$20 million Series C round of investments led by Kleiner Caufield & Byers and a \$45 million Series D round of investment led by Google Capital. Duolingo has 95 staff members, of whom many were Google employees, and operates from an office in Pittsburgh neighborhood of East Liberty. On November 13, 2012, Duolingo released their iOS app through the iTunes App Store. The application is a free download and is compatible with most iPhone, iPod, and iPad devices.

On May 29, 2013, Duolingo released their app, which was downloaded about a million times in the first three weeks and quickly became the #1 education app in the Google Play Store. As of 2017, the company had a total funding of \$108.3 million. Duolingo received a fifth-round \$25 million on

July 2017 from Drive Capital, with the funds directed toward creating initiatives such as Tinycards and Duolingo Labs.

2. The Characteristics of Duolingo

Duolingo is available with two versions, one for the teacher and one for the student. For the student, it shows some exercises and quizzes for grammar and vocabulary grouped by various contexts. As for the teacher version (Duolingo classroom), consists of students' management and English curriculum management, constructing assignment, monitoring the class activities, and also giving the tests, assessment, and feedback online (Shelly, 2010).

These features giving the teacher many advantages (Shelly, 2010). First, we can reduce the time we spent on assessment activities. Compared to common paper-based assessment, operating Duolingo is pretty faster and the students can get their feedback directly on the phone screen or monitor after the students finished the test.

Second is about the content limitation. By using Duolingo we can handle the materials we give to the students because there is curriculum page which contains of what will be given as a test for the students. It shows what the goal of the material is, and it needs our approval in order to get posted. Then as for the efficiency of time managing the students, we can give the exact time of when the test will be done and the duration of it.

Every language that is available in Duolingo has a skill tree. Students begin learning from the basics and as they progress, the skills build on each other and become more complex. After the students successfully progress through the tree, they unlock the next lesson and units. It will not advance unless the previous skills have been mastered. The goal is to get through all of the lessons and skills in the tree to master a language.

There are 5 parts in the UI in the Duolingo (Shelly, 2010). The first part (1) consists of user's profile, it can be found account setting, help, and log out. Beside of it are performance and lingot, it is for buying an item in the shop. The part (2) shows the topic of the material which is tested. There are some levels inside of each topic. The (3) part is crown. It shows level of our performance in answering each topic. When the user levels up a skill, user earns a Crown, and the types of exercises will get harder gradually. The (4) part shows user's daily goals in using Duolingo. It can be set depend on the user need. The last part (5) is the task which given by the teacher, it will show checklist on the task if it is already done.

Figures 2.1 Steps of Duolingo Application

The user interfaces of Duolingo classroom. The (1) part shows the member of the Duolingo classroom, their activities, and their gained experience. We can also manage the classroom member by inviting more students or remove them. The (2) part is used for the teacher to give the assignment to the students. They can arrange the deadline and the material which is going to be tested. The (3) part is the English Curriculum. It shows the whole material that is available in Duolingo. The materials are divided into three levels, beginner skills, intermediate skills, and advance skill. The students cannot access the higher level if they have not done the lower skill or without teachers' permission. The teacher can review it first to find the suitable material for the learning before giving it to the students in the class activities (4). The (5) part consists of classroom setting. There are a set up

for class password, merge classroom, and also the teacher can download setup instruction for them who is just begin using Duolingo classroom.

3. Teaching Vocabulary Using Duolingo

As the number of English learners is increasing, many teaching methods and steps have been applied to create the effective teaching vocabulary. Many experts have some different thought about the important steps about teaching vocabulary. The essential steps of learning vocabulary are (Veroniaka, 2014):

- Having sources for encountering new words. Foreign language students are different with native speaker, they must have source of new words as their vocabulary mastery cannot happen unintentionally. It can be workbook, internet, TV and radio, magazines, or anything as long as students can gain new vocabularies.
- Getting a clear image for the form of new words. It will be easier for the students to remember a new word if they know the form. For example, they already know the physical form of a smartphone as they are learning about what a “smartphone” word is.
- Learning the meaning of new words. The meaning of the new word must be clearly learned to prevent the misunderstanding of the words, especially homograph words. For example: close (nearby), close (to shut) resume (curriculum vitae), resume (to start again) 4) Making a strong

memory connection between the form and the meaning of the words. For more comprehensive mastery students are recommended to make a connection between the form and the meaning of the words.

- Using the words. After gaining a new word, using it frequently will help the students to understand the meaning and remember the word more easily.

Cohen & Cowen argued that there are some important steps in teaching a new vocabulary, those are:

- The teacher must pronounce the word correctly because the students may likely pronounce the word the way the teacher does.
- Try to explain the word clearly to prevent the misunderstanding of the meaning.
- Provide examples of the word. It will help the students to know how to use the word in a sentence.
- Elaborate on the word. Give them more knowledge about the word, for example, the position changing of the word.
- Assess the word. Make sure the students' understanding about the word is similar with what the teacher has intended to teach.

Teaching vocabulary is not as easy as it seems. Sometimes students are good at following the class, but after they got home, they easily forget what

they have learned in school. The language learning should not stop after the learners leave the classroom. The new era assigns new challenges and duties on the modern teacher. We should be innovative in order to solve the problem. So, technological devices are one of the options to be used by students and teachers in order to provide an interaction between language learners and teachers inside and outside the classroom. Peer to peer internet connections and mobile devices are the most popular and useful ways in language learning.

Duolingo is teaching and learning application that is expected to be successful in replacing the traditional teaching. As stated before that the major components of Duolingo application are grammar and vocabulary, so it is recommended to use this application for teaching those subjects. As stated by Paul Magnuson, there are some implementation of using Duolingo in teaching EFL students:

a. During the class

The teacher provide time for the students to work by themselves individually at least 50 percent of class time, and then the rest of the time is used for the students work in teams on either the online language reviews or the language awareness activities. At the same time, teacher can also does the review and giving some feedbacks.

b. As a Homework

Regardless of how effective the time management in the class, it is important to continue the adequate progress of using Duolingo outside the classroom. The problem is students tend to have less attention because they thought that they already use the application through the classroom, so they would rather not use it outside the classroom. However, it is still the teacher's duty to maximize the use of Duolingo as a homework. It can be giving them an actual physical reward, prolong the assignment deadline, and so on.

Considering the teaching steps discussed above, the teacher implements the use of Duolingo application into English teaching activities as follows:

1. Firstly the researcher choose the specific material of vocabulary that will be given to the students.
2. The researcher gives the students a brief explanation about the generic structure of descriptive text and how to describe something.
3. The students log in to their Duolingo account and enter the Duolingo classroom (Morning English)
4. They will find an assignment box in the middle right of the page and the deadline of it.
5. The students do the assignment. If their answer is wrong, then the question in which they get mistaken will be repeated until they find

the right answer (direct corrective feedback). In the end, they will get an “exp” according to their correct answer.

6. After they are done practicing using Duolingo, they are required to make a different sentence and paragraph from the vocabulary that they got from Duolingo.
7. In the end of the lesson the students are recommended to use Duolingo at their home by themselves.

b. Vocabulary

1) Definition of Vocabulary

Vocabulary is the basic chunk of language. It is the most robust element in learning and understand the whole skills of language. You could not read or write well if do not have adequate vocabulary, so does read and listen to some conversations or speeches. Thornbury (2002) stated that we could not express many things without grammar and we could not say anything without vocabulary.

Knowing the meaning of most of the words is another level of mastering the language. Harmer (2009) in his book concluded that knowing a vocabulary means knowing about meaning, word use, word formation, and word grammar. Anyone who wants to master the language needs to master vocabulary initially. In line with Linse and Nunan (2005) statement that

vocabulary must not only be known but also must be readily available so that the language can be used.

Developing students' vocabulary can be defined as an action or activity taken by teachers in order to assist students to enrich their. In teaching students' vocabulary, the material should include some element so English vocabulary, such as verbs, nouns, pronouns, adjectives, adverbs, and conjunctions. According to Nation (2013), vocabulary has two types receptive and productive. Receptive vocabulary refers to words that are recognized when they are listening or reading while a productive vocabulary consists of words that are used when speaking or writing. The receptive vocabulary is usually bigger than the productive vocabulary, and it might comprise a significant number of terms.

2) The Importance of vocabulary

Vocabulary is the basic chunk of language that is used in daily life to communicate each other. In the context of learning vocabulary, it is important for teachers to know the learning needs of the students. Nation (2013) stated that teachers should know the appropriate techniques or ways in order to be able to facilitate students in learning vocabulary. Teachers should assist students in learning by teaching them useful words in order to be able to figure out their own meaning.

Teaching vocabulary is also very closely related to the context. In Xu (2013), using context to teach vocabulary can help students not only to master the vocabulary but also understand the meaning of the words. Therefore, it is important to learn vocabulary in context.

3) Function of Vocabulary

One of English components to be taught to the learners is vocabulary. Because it has primary role for all language skill. Vocabulary is the backbone of any languages. Without extensive vocabulary knowledge, even those who show mastery of grammar might experience the failure in communicating with others.

Gairns and Redman concluded that by learning vocabulary, the learners can recognize and comprehend the context of reading, listening, material and later as productively learners can remind and use them appropriately in speech and writing. In this case, the statement noted by Legget (2001) and said that by vocabulary the learners can recognize all the words in written and oral context and finally they can use them daily in speaking and writing. Based on this research the researcher can be concluded that function of vocabulary is the students can be recognize all the words in writing, comprehend the context of reading and can remind and use them speaking and writing.

Many foreign language learners know the feeling of not being able to remember the right word instantly in a conversation because of the limited range of vocabulary they know. This feeling of inadequacy often hinders further development of the language. On the other hand, vocabulary functions a tool that assist learners to form sentences and express themselves in meaningful ways.

4) Teaching and Learning Vocabulary

Teaching and Learning Vocabulary is not a simple way since it requires the teacher's ability to recognizing the competence and characteristics of students is needed in order to carry out effective teaching according to the needs of students. Teaching English vocabulary to children is not the same as adults, so what we need to pay attention to is that the material taught to students must be appropriate for their age level. This strategy is very useful for beginners to be able to stimulate students' vocabulary. Besides, there are some techniques that can be used in learning vocabulary such as playing games, carrying dictionary everywhere, flash carding, stickiest and so on. Games itself are fun and nearly can be made enjoyable to teach vocabulary. Games help bring the classroom closer to the real world, no matter how contrived they may be and make the class atmosphere more live with the fun activities.

a) Kinds of Vocabulary

Harmer (2007) also divided vocabulary into two types there are: a) Active vocabulary refers to vocabulary that students have learned. They are expected to be able to use by the students. b) Passive vocabulary refers to words, which students will recognize when they met them but they will probably not be able to produce (Harmer, 2007)

Schall in Amiruddin (2004) classified vocabulary into three types, namely:

- 1) Active vocabulary, the words are customarily used in speaking.
- 2) Reserve vocabulary, the words we know but we are rarely used them in ordinary speech. We use them in writing letter and searching for synonym.
- 3) Passive vocabulary, the words are recognize vaguely but we are sure of the meaning never use them is either speech or writing, we just know them because we see them before.

b) Part of Vocabulary

There are three parts that include in vocabulary, they are:

- Noun

Macfadyen in Rahbania (2014) said that noun is a word used to name a person, animals, place, country, thing, ides or abstract idea

second and perhaps a little trickier, a noun can be an action. A noun could function in a sentence as a subject, a direct object, an indirect object, a subject complement, an object complement, an appositive, an adjective or an adverb.

- Verb

Swan in Rahbania (2014) said that a verb is a word which could be used with a subject to form basic or close sentences and he also said that verb is a word or phrase indicating in action.

- Adjective

Macfadyen in Rahbania (2014) said that adjective modifies a noun or a pronoun by describing, identifying, or quantifying words. An adjective usually precedes that noun or pronoun which it modifies.

B. Conceptual Framework

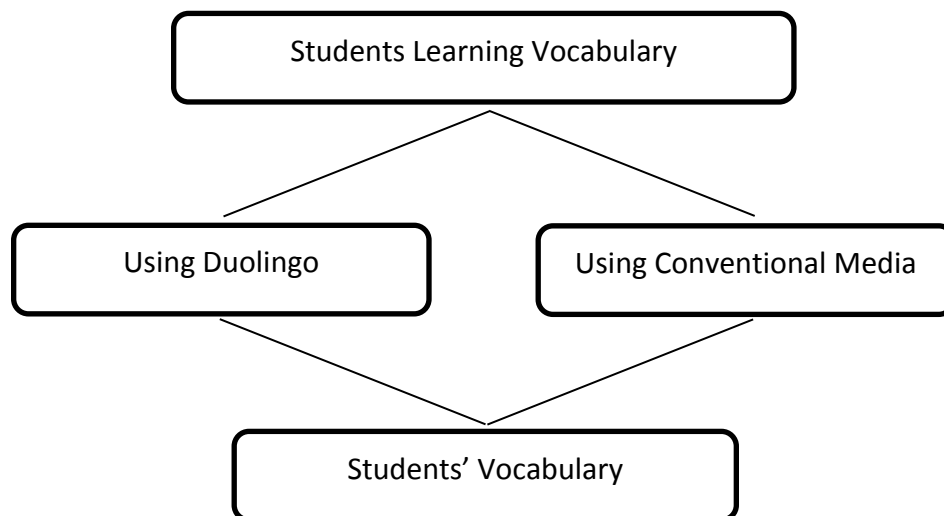

Figure 2.2 Conceptual Framework

The following is the explanation of the conceptual framework of this research, the researcher focus on students' experiences in using Duolingo. Duolingo is expected to contribute in teaching vocabulary.

C. Hypothesis

Based on the title of this researcher, the hypothesis will be seek to answer the following statements:

H_0 : Using Duolingo is not effective in learning vocabulary.

H_1 : Using Duolingo is effective in Learning Vocabulary.

CHAPTER III

RESEARCH METHODOLOGY

A. Research Design

This research used a quantitative research design. This research elaborated the effect of using Duolingo on students' learning vocabulary experiences at MTS Madani Pao – Pao with their teaching and learning process. This study applied quantitative method using a quasi-experimental design. According to venderstoep and johnston (2009), quasi experimental is a study that takes in real life-setting rather than in laboratory setting, they are often considered not truly experimental research but rather correlation research, which involved identifying statistical between two variables rather than casual relationship.

B. Research Setting

This research was carried out on 15 Mei 2024 – 15 Juni 2024. This research conducted in MTS Madani Pao-Pao. It is located in Paccinongan Street Somba Opu District, Gowa Regerncy, South Sulawesi.

C. Research variables

This research focused on the study of the influence of treatments. According to Arikunto explanation in hisbook (2003), there are two variables

which are independent and dependent variable. Schreiber & Asner-Self (2011) defined independent variable (X) is a variable that is stated to cause some outcome. In this research, the independent variable is learning vocabulary. According to Schreiber & Asner-self (2011), dependent variable (Y) is the outcome of the independent variable; it is the effect. The dependent variable in this research is the effect of using Duolingo on students' experience.

D. Population and sample

1. Population

According to Arikunto (2013) Population is all subjects in the reserch. In addition, Creswell (2012) defined that population as a group of individuals who have the same characteristics or with some common defining characteristic that the research can identify and study. The population of the research is all of the students of MTS Madani Pao -Pao There are 37 students as the population of this research.

2. Sample

According to Creswell (2012), sample is a group of subject selected from the population. In addition, according to arikunto (2013) sample is most of representative of who are researched. The researcher select randomly the students with dividing 10 students in class VIII-B as a control class to use

Duolingo, and 10 students in VIII-B as an experimental class to use conventional way.

E. Research Instrument

According to Arikunto (2013) research instrument is a tool that is selected and used by researchers in carry out their activities to collect data so that the activity becomes systematic and facilitated by it. In this study, the researcher gained the data using test of English students with 10 questions in MTS Madani Pao -Pao which was adopted from Munday (2018).

F. Data Collection Procedure

The researcher collected the data in several steps, the steps were mentioned in the following:

1. The researcher prepared the questionnaire. The researcher did it to get the information about students' experiences and the observation to get the information about teaching vocabulary.
2. The researcher got the permission from headmaster of MTS Madani Pao-Pao.
3. The researcher tryed to make interactions and mention about the test.
4. The researcher conveyed the test to students.
5. After that, the researcher collected the test.

6. In the final step, the researcher analyzed the data.

G. Data Analysis Technique

The data was gathered through the test and analyzed by using the following steps as stated in Sugiyono (2018):

1. Calculating the students' correct answer of questionnaire.

$$\text{Score} = \frac{\text{Correct answer}}{\text{Total number of items}} \times 100$$

2. Tabulating and classify the students' score into the following clarification.

The scores of the questionnaire were classified into seven levels as follows in Sugiyono (2018):

Table 3.1 : Score Classification

No.	Classification	Score
1.	Excellent	80-100
2.	Good	69-79
3.	Fair	58-68
4.	Poor	46-56
5.	Very Poor	35-45

This classification is provided to identify the level of students' experience after using Duolingo.

3. The mean score of the students' find out by means following the formula (Sugiyono, 2018):

$$\bar{X} = \frac{\sum X}{N}$$

\bar{X} = The mean of score

$\sum X$ = The sum of all scores

N = The number of students

4. Finding out the standard deviation by applying this formula (sugiyono, 2018):

$$SD = \sqrt{\frac{SS}{N}}, SS = \sum X^2 - \frac{(\sum X)^2}{N_1}$$

Where:

SD = Standard deviation

SS = The sum of square

N = Total Number of the subjects

$\sum X^2$ = The sum of all square; each score is squared and all the squares are added up

$(\sum X)^2$ = The square of the sum; all the scores are added up and the sum is square, total

5. The formula that was used in finding out the difference between students' scores.

CHAPTER IV

FINDINGS AND DISCUSSIONS

A. FINDINGS

1. The Effect of Using Duolingo on Students' Learning Vocabulary Experience

The findings of the research were based on the results of the data analysis. The vocabulary test was used to collect data. The test consisted of pre-test and post-test. The pre-test was given to find out the students' background knowledge on learning vocabulary experience before using Duolingo and the post-test was given to find out the increase of the students' learning vocabulary experience skill after giving the treatment.

- **Scoring and Classifying the Students' Pre-test and Post-test Scores in Experimental Class.**

Table 4.1: The Rate Percentage of Experimental Class in Pre-Test

No.	Classification	Score	Frequency	Percentage
1.	Excellent	80-100	0	0%
2.	Good	69-79	0	0%
3.	Fair	58-68	1	5%
4.	Poor	46-56	6	65%
5.	Very Poor	35-45	3	30%
Total			10	100%

Table 4.1 Shows that, the rate percentage and frequency of the student's experimental class in the pre-test, the students got neither excellent and nor good score, and 1 (5%) student got fair score, 13 (65%) students got poor score and 6 (30%) students got very poor score. It meant that, the students' scores before given treatment were low.

Table 4.2: The Rate Percentage of Experimental Class in Post-Test

No.	Classification	Score	Frequency	Percentage
1.	Excellent	80-100	1	5%
2.	Good	69-79	5	45%
3.	Fair	58-68	3	35%
4.	Poor	46-56	1	15%
5.	Very Poor	35-45	0	0%
Total			10	100%

Table 4.2 shows that, the post-test there was not student got excellent score, there were 10 (50%) student got good, 7 (35%) students got fair score, 3 (15%) students got poor score, and there was not student got very poor score. It meant that, the use of Duolingo was effective to improve students' learning vocabulary experience.

Based on the result above, it can be concluded that, the rate percentage in post-test was higher than the rate percentage in pre-test.

Table 4.3: The Rate Percentage of Control Class in Pre-Test

No.	Classification	Score	Frequency	Percentage
1.	Excellent	80-100	0	0%
2.	Good	69-79	0	0%
3.	Fair	58-68	2	20%
4.	Poor	46-56	5	50%
5.	Very Poor	35-45	3	30%
Total			10	100%

Table 4.3 shows that, the pre-test there none of the students 0% got in excellent and good score. There were 4 (20%) students got fair score, 10 (50%) students got poor score, and 6 (30%) students got very poor score. It meant that, the students' score before giving treatment was very low.

Table 4.4: The Rate Percentage of Control Class in Post-Test

No.	Classification	Score	Frequency	Percentage
1.	Excellent	80-100	0	0%
2.	Good	69-79	0	0%
3.	Fair	58-68	4	40%
4.	Poor	46-56	4	40%
5.	Very Poor	35-45	2	20%
Total			10	100%

Table 4.4 shows that, the post-test there none of the students (0) % got in excellent and good score. There were 8 (40%) students in fair and poor got same score and, 4 (5%) student got very poor score. It meant that, the students score in post-test also was high a little than pre-test in control class.

From the table above, it can be concluded that the results of the students' written test showed the most percentage were in the good category in the experimental class.

- **Scoring the Students Questionnaire by Using Scale Likert and Classifying the Students' score by Using Interval Score.**

Table 4.5: Students' Duolingo Questionnaires Score

Interval	Score	Number of the Student	Percentage
70-100	High	7	35%
51-69	Average	11	55%
0-50	Low	2	10%

The table shows the distribution of frequency and percentage of final score after the researcher gave the students' questionnaires to measure their knowledge based on the aspects of using Duolingo. From the table, it can be concluded that the results of the students' Duolingo questionnaire score showed the most percentage were in the average category.

Table 4.6: The Normality Test of the Variables

One- Sample Kolmogorov-Smirnov Test		
		Unstandardized Residual
N	40	
Normal Parameters ^{a,b}	Mean	.0000000
	Std. Deviation	12.66487467
Most Extreme Difference	Absolute	.094
	Positive	.076
	Negative	-.094
Test Statistic		.094
Asymp. Sig. (2-tailed)		.200 ^{c,d}
a. Test distribution in Normal.		
b. Calculated from data.		
c. Lilliefors Significance Correction		
d. This is a lower bound of the true significance.		

Table 4.7: The Homogeneity Test of the Variables

ANOVA TABLE					
			Mean Square	F	Sig.
Duolingo	Between Groups	(Combined)	194.071	.942	.565
Students' Experience		Homogeneity	1493.812	7.248	.017
		Deviation from Homogeneity	137.561	.667	.814

	Within Groups	206.111		
	Total			

The test result of the homogeneity of both variables using the value of the residue indicates that the significant value is greater than 0.05. It can be concluded that data from variables with a normal distribution with a significant value of $0.200 > 0.05$ and data from variables with a homogeneity distribution with a significant value of $0.814 > 0.05$.

To know whether there is any effect of using Duolingo on students' learning vocabulary experience, both variables were analyzed by using independent sample t-test.

Table 4.8: The Independent Sample T-Test

Coefficient		
		Experience
Duolingo	Pearson Correlation	.650**
	Sig. (2-tailed)	.002
	N	20

From the table, the researcher found that the coefficient significant of using Duolingo on students' learning vocabulary experience was $0.002 < 0.5$. which means there is any effect of using duolingo. Therefore, for the first

hypothesis the null hypothesis (H0) is rejected and the research hypothesis (H1) is accepted.

Table 4.9: The Value of Coefficient Determination/Regression (SPSS)

Model Summary				
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.650 ^a	.422	.390	5.704
e. Predictors: (Constant), Using Duolingo				

Further, simple regression was done to analyze how far the contribution of using Duolingo in students' learning vocabulary experience. The variable entered is the independent variable which gives influence to the dependent variable. Then the result showed the coefficient determination was 0.390.

From the analysis above, the adjusted R Square shows 0.422, it is interpreted that using Duolingo influenced 42.2%. The result of this research showed that there was an effect of using Duolingo in students' learning vocabulary experience with a coefficient correlation of 0.650.

B. Discussion

Based on the finding above, it can be concluded that the influence of using Duolingo in students' learning vocabulary experience was significant. The result

of this research can be concluded that the effect of using Duolingo is significant at the level 0.1, the coefficient correlation was higher than the critical value of r-table $0.650 > 0.444$. It meant that the null hypothesis (H0) is rejected and the research hypothesis (H1) is accepted.

The coefficient determination (adjust R square) of using Duolingo in students' learning vocabulary experience is 30.9%. This proved that using Duolingo had a major contribution to the achievement of students' learning vocabulary experience. It can also be seen from the correlation value (R) of the two variables is high (0.650).

There were several points that make using Duolingo was effective. They were: the student was able to memorize new vocabulary and train their critical think using Duolingo. The researcher increased students' motivation and confidence by giving them opportunity to demonstrate their mind in front of class. Using Duolingo made the students' comprehension clear because the students not only learned the abstract material through explanation, but also they could improve their other English competence, they were morphology and grammar.

Most of people believe that experience is a talent, but according to Nunan (2003) "experience is a teachable and learnable skill" for both native and non-native speakers. In foreign language teaching, basically, learners are exposed to

varied course books and literary texts (generally simplified graded readers or authentic literary texts) as well as other text resources which can help them build up prior knowledge and present model texts for their vocabulary.

Rayendriani (2019) examined the use of Duolingo, specifically at a community college. They found that the participants, who were 19 ESL students, improved their vocabulary after they had used Duolingo in their writing class. Other than that, Riddel (2020) mentions that participant who used Duolingo also have improved their level of vocabulary proficiency. It was found that 21 undergraduates had shown that there were fewer vocabulary errors after they had experienced Duolingo. This proves that using Duolingo has a positive impact on learning vocabulary experience.

The researcher can conclude from above findings and theory that using Duolingo is a media that is suitable to be applied in class or outside the classroom in learning vocabulary. The results of this study indicated that this using Duolingo had an effect in increase students' learning vocabulary experience. It was proved by the result of the data analysis after being with simple linear regression.

To sum up, based on the result of this study, which showed the students' scores were higher after the treatment in experimental class using Duolingo. The use of using Duolingo for teaching English was surely beneficial to increase

students' vocabulary experience. In summary, the researcher asserted that using Duolingo was important to affect students' learning vocabulary experience.

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

A. Conclusions

Based on the findings in the previous chapter, the researcher has a conclusion that there is a significant effect of using Duolingo on students' learning vocabulary experience where the contribution of using Duolingo was 42.2% and the coefficient correlation was high (0.650). Due to this fact, H_0 was rejected and H_1 was accepted. It means that there was an effect of using Duolingo in enhancing students' learning vocabulary experience. Using Duolingo affected to motivate students in doing general activities in vocabularies.

B. Suggestions

Considering the conclusion above, the researcher puts forward some suggestions as follows:

1. For the teacher

In teaching/learning activity, especially in vocabulary, the teacher or lecturer could use Duolingo as a learning method in order to students interested to learn English. Using this method possible to make students not only just memorizing vocabularies but they can get knowledge and make the students relax or enjoy during the learning process in the classroom.

2. For the Next Researcher

Since this study was contributing to enrich students' learning vocabulary experience, so the researcher should be innovative in teaching the students.

3. For the Students

Students should be able to identify the effects of using Duolingo in their learning vocabulary experience, and apply it in learning process. It can help them to be easier to increase their learning vocabulary experience.

APPENDIX**Vocabulary Test**

Name: _____

Class: _____

Choose A, B, C or D as the best answer!

1. Rina is _____ television with her brother.

- a. playing
- b. flying
- c. watching
- d. reading

2. Rio : Hi Rina, what are you doing?

Rina : I am _____ milk.

- a. eating
- b. playing
- c. writing
- d. drinking

3. Now my mother is _____ food in the kitchen.

- a. working
- b. cooking
- c. studying
- d. playing

4. Tina is _____ a book now.

- a. reading
- b. cooking
- c. drinking
- d. eating

5. I have a ball. I want to _____

- a. play guitar

- b. play football
 - c. play piano
 - d. play see-saw
6. My father is not _____ at the office right now.
- a. playing football
 - b. cooking
 - c. sleeping
 - d. working
7. Anna is _____ in the swimming pool now.
- a. drinking
 - b. reading
 - c. swimming
 - d. watching
8. I wear white _____ and black shoes to go to school.
- a. jeans
 - b. t-shirt
 - c. a cap
 - d. socks
9. I want to wear _____ in my head.
- a. boots
 - b. jeans
 - c. a cap
 - d. sandals
10. My sister looks taller when she wears _____.
- a. skirt
 - b. high heels
 - c. a cap
 - d. socks
