## PERSETUJUAN UJIAN MUNAQASYAH

Skripsi dengan judul "*The Effect of Internet Based Teaching Media to Increase Students' Reading Comprehension of the Eleventh Grade at MAN 3 Makassar*", yang disusun oleh Saudari **Julia Wafiq Azizah**, NIM: 20400119001, telah diseminarkan dalam Ujian Kualifikasi Hasil Skripsi pada hari Senin, tanggal 4 Desember 2023 M, bertepatan dengan tanggal 20 Jumadil Awal 1445 H. Skripsi tersebut telah melalui proses perbaikan dan memenuhi syarat-syarat ilmiah serta disetujui untuk diajukan dalam *Ujian Munaqasyah*.

Demikian persetujuan ini diberikan untuk proses selanjutnya.

## ACKNOWLEDGMENTS

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

*Alhamdulillah Rabbil Alamin*, none of these things would happen if it is not the Almighty Allah *Subhanahu Wa Ta'ala* for showering the researcher with mercy, love, and ideas so that the researcher can complete writing of the thesis with the title “The Effect of Internet-Based Teaching Media to Increase Students’ Reading Comprehension of the Eleventh Grade at MAN 3 Makassar”. *Shalawat* and *shalam* are also conveyed to our noble Prophet Muhammad *Shallallahu ‘Alaihi Wasallam*, who had led us from *jahiliyah* to Islamic golden era.

The researcher would like to express gratitude and appreciation to the following people in particular for their invaluable advice, correction, suggestions, patience and support to the researcher during the writing of this thesis. Thanks to the researcher beloved parents **Muhammad Husain** and **Ummul Hairi**, her dearest siblings **Ismayanah** and **Aksaburrahman** for their love, prayers, and unconditional support in the researcher tough time in writing thesis. Also thanks to her aunts **Dra. Hj. Hatijah** and **Dra. Hj. Warnita** who does not only provide emotional support but also financial support during the researcher’s study period. This thesis could not have been finished without the help and support of those surrounding the researcher whether or not they are acknowledged in this acknowledgement. Therefore the researcher would like to thank:

1. **Prof. Dr. H. Hamdan Juhanis, M.A., Ph.D.**, as the Rector of Alauddin State Islamic University Makassar.
2. **Dr. H. A. Achruh AB. Pasinringi, M.Pd.I.**, as the Dean of the Faculty of Tarbiyah and Teacher Training, Alauddin State Islamic University Makassar.
3. **Dr. Sitti Nurpahmi, S.Pd., M.Pd.** and **Nur Aliyah Nur, S.Pd., M.Pd.**, as the Head and the Secretary of the English Education Department at Alauddin State Islamic University Makassar.
4. **Prof. Dr. Hj. Djuwairiah Ahmad, M.Pd., M.TESOL** and **Muhammad Syahrudin Nawir, S.Pd., M.Hum.**, as the researcher's consultants. Your guidance and kindness will always be remembered.
5. **Dr. Kaharuddin, S.IP., M.Hum.**, and **Annisa Shofa Tsuraya, S.Pd., M.Pd.**, as the examiners of this thesis, for their valuable constructive criticism and guidance.
6. All the lecturers of the Department of English Education at Alauddin State Islamic University Makassar, this thesis is finally completed with the knowledge you have shared with us.
7. All staffs in the department and the faculty who have assisted students in managing all formal affairs and needs including during the preparation of this thesis.
8. All the teachers and staffs at Madrasah Aliyah Negeri 3 Makassar, especially **Muh. Ansharuddin Y., S.Ag.**, as the Deputy Head of Public

Relations as well as the English teacher for his guidance while at the research location.

9. All the students of XI IPS 1 and XI IPS 2 at Madrasah Aliyah Negeri 3 Makassar who have participated well during the research.
10. To the researcher's friends in Class A of the English Education Department 2019, may our solidarity always be maintained forever.
11. To KKN Tanete 69, thank you for always being with me during the end period of college. May our friendship last forever.
12. To everyone and everything that has sparked joy in the researcher's life.
13. To me, myself; Julia Wafiq Azizah. Thank you, you have done well to survive this long. Whatever waits ahead after college; we got this.

The researcher is aware that there might be flaws in the drafting of this thesis, hence the remaining errors are the author's fault. Furthermore, suggestions and constructive criticism are highly appreciated. May Allah *Subhanahu Wa Ta'ala* grant success to all of our efforts. *Aamiin Allahumma Aamiin.*

Makassar, October 2023

The Researcher,

Julia Wafiq Azizah

---

The objective of this research is to find out the effect of Internet-Based Teaching Media, which is LINE Webtoon to increase students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.

The research design of this research was quasi-experimental design. The population was the eleventh grade students in social class consisting of 108 students. Purposive sampling was utilized to choose the sample. There were total 54 students from classes XI IPS 1 and XI IPS 2 as the sample. XI IPS 1 became the controlled class taught using reading textbook, while XI IPS 2 became the experimental class taught using Internet-Based Teaching Media that is LINE Webtoon. The instrument used to collect the data was reading test in the form of multiple choice. IBM Statistics 26 was used to analyzed the data.

Based on the result of independent sample T-test, the null hypothesis ( $H_0$ ) was rejected and the alternative hypothesis ( $H_1$ ) was accepted. It means that, the use of LINE Webtoon as an Internet-Based Teaching Media in teaching reading was effective because it increases the students' Reading Comprehension with the Sig. (2-tailed) was 0.00.

Based on the findings of the research, the researcher recommends that Internet-Based Teaching Media, particularly LINE Webtoon be used as a media in teaching and learning English, specifically to increase the students' Reading Comprehension. LINE Webtoon provides comic in a variety of genres such as drama, fantasy, thriller, action, comedy, etc., so the vocabulary found in comics is quite wide. It has the potential to expand students' vocabularies. By having a large knowledge of vocabulary, students will easily comprehend reading. LINE Webtoon also provides interesting pictures. It facilitates students comprehension of story's plot. With pictures, students can also guess the meaning of unknown words or sentences.

## CHAPTER I

### INTRODUCTION

This chapter discusses the research background that leads to research question, research objective, research significances, research scope, and operational definition of terms.

#### **A. *Background***

There are many languages in our world. Most countries have an official language and several regional languages within the country. English is one of the international languages in these circumstances. In Indonesia, the majority of students study English in school. Teaching English is an integral part of the Indonesian education system (Mappiasse et al., 2014). English bridges the gap between nations and gives everyone the opportunity to interact with a wide range of people. In English learning and teaching process, teachers and students should be proficient in four skills: speaking, reading, writing, and listening.

Out of the four skills required to become successful in the teaching and learning process, reading continues to be the most difficult. The majority of Indonesian students struggle to comprehend texts because they are either non-readers or lack language. Since reading has ingrained itself into daily lives and is a necessary skill for learning English as a second language, it is essential that students learn this skill. In the classroom and in daily life, reading is the most crucial collaborative skill. English is essential for searching information, acquiring knowledge, and is often used as the

language of instruction in higher education (Sultana, 2014). Reading is important for many reasons. Reading improves students' vocabulary, trains students' comprehension, improves students' language skills, and helps them understand the meaning of written texts.

Reading can help students become more proficient in language and reading comprehension as well as changing the way they think. What they read and what they need to know provide them with motivation and knowledge. Achieving the goal requires reading comprehension. Gilakjani (in Kintsch and van Dijk, 1977) said that making sense of a text is the process of reading comprehension. Understanding the text is the main objective; word and phrase meanings are not.

The statements above are reinforced by the word of Allah SWT in QS. al-Alaq (96): 1-5.

أَفْرَأُ بِاسْمِ رَبِّكَ الَّذِي خَلَقَ (١) خَلَقَ الْإِنْسَانَ مِنْ عَلَقٍ (٢) أَفْرَأُ وَرَبُّكَ الْأَكْرَمُ (٣)  
الَّذِي عَلَّمَ بِالْقَلَمِ (٤) عَلَّمَ الْإِنْسَانَ مَا لَمْ يَعْلَمْ (٥)

Meaning: *Read in the Name of your Lord who created; Created man from a clinging mass. Read, and your Lord is the most generous, who taught by the pen, taught man what he did not know.*

The verse above shows how the acquisition of knowledge and wisdom is related to writing and reading. People share their thoughts and insights with others by writing and learn from others by reading the writings. Through

reading, people think, reflect, and come up with new ideas that lead to more knowledge, wisdom, discovery, and invention.

Given that acquiring knowledge and gathering information is the primary goals of reading, readers can obtain information and knowledge about the subject they want to know more about through reading. Reading can be done for two main reasons: knowledge and enjoyment (Grellet, 1986, cited in Friska, Y., 2018). Teaching students to apply their prior knowledge to comprehend new material in a text is essential when it comes to reading comprehension. This could take the shape of an idea, even a straightforward one. Put another way, in order for students to comprehend the reading process more fully, they must be taught how to read (Choiringtyas, D., 2018). Students' motivation to study has an impact on their reading comprehension. Motivating students increases their interest in learning. According to Hamzah (2011, cited in Kasyulita, E., et al., 2016), the type of learning motivation for students learning to sustain behavioral change is internal and external encouragement.

Teachers have an important role in teaching reading. This implies that teachers need to be highly knowledgeable, utilize the best method, and have a thorough understanding of teaching and learning. Being knowledgeable about the usage of technology in the classroom is one of the things a teacher may do differently. The enthusiasm of students in learning English will unquestionably rise as a result. Teachers must be able to assist students in their reading learning in order to address their reading challenges. By

utilizing interesting techniques and media, teachers can maintain their students' interest in the material being taught. Maintaining students' interest in language learning can be achieved more successfully by using an excellent reading teaching technique (Fauziah, 2017).

Internet-based learning media is an essential part of the learning system. In other words, learning materials and learning processes are inextricably linked. It uses networks as a means of interaction, seeding, and facilitation and is a very strategic tool that can be seen, heard, read, or discussed. The process of teaching and learning cannot take place without learning media. At least one medium must be chosen and used in every teaching and learning process in order to transmit knowledge. Learning media and learning resources are closely related because learning media contain information that can be knowledge or serve as a tool for students to complete learning activities (reading, observing, trying, doing questions, answering questions, etc.). According to Soko (2017), it is anticipated that the process of a teacher giving a message to students will be more successful and efficient when media is used in the teaching and learning process. Teachers now have to use their imaginations to use technology and the internet to create far more engaging media.

Media as part of education has a big impact on the learning process. Nowadays, especially students in Indonesia are unable to live without their smartphones. The utilization of digital media is maximized in this case. Online and digital content interests students. One type of media is comic

books. In the classroom, it can be used to teach reading comprehension. Today, teachers no longer need to bring printed comic books to school because they can use digital version of comics. LINE Webtoon is an application that provides a collection of comics in different languages like English and Indonesian. Liu (2004) stated that comics are a useful tool for enhancing reading comprehension. It helps students understand the text more easily.

The term 'webtoon' is a coined word combining 'web' and 'cartoon' and was first used in South Korea for webcomics (Cho, 2016). In the context of this article, 'web' refers to networks and 'cartoon' refers to all kinds of comic series offered to consumers over a network called 'internet' (Yeobyu, 2016, cited in Kiflaini, 2019). A webtoon can be interpreted as a type of e-comic, online comic, or digital comic that can be downloaded to smartphones, computers, and other electronic devices.

Based on the preliminary research that has been done on eleventh grade students of MAN 3 Makassar about the ability of Reading Comprehension and understanding the narrative text on 27<sup>th</sup> March 2023 until 8<sup>th</sup> April 2023 by observation and interview method. The result of the preliminary research shows that eleventh grade students of MAN 3 Makassar are lacking in vocabulary and make it hard to answer the teacher's question or expressing their opinion in English. This condition also affects the student's understanding whenever the teacher explain the material in

English and makes the students feel confused, stressed, and under pressure in learning process.

Moreover, this condition of learning process in eleventh grade of MAN 3 Makassar is very opposite from the targets and purposes of the syllabus which want the students to understand the structure of narrative text and be able to comprehend and articulate the moral lesson found in narrative texts, also students can also describe how narrative texts are structured. Prior to students reaching the goals and objectives of their English language education, the teacher must employ an efficient teaching strategy to increase the students' vocabulary. When all this time the teacher only uses reading textbook to teach student by writing in whiteboard, repeated the pronounce of the word, find the difficult word, and find the meaning through dictionary only put student on boredom of learning process and cause the lack of student's vocabulary.

This incompatibility with the student's condition and the targets of the syllabus encouraged researcher to use innovative media in English learning. The LINE Webtoon is used as a tool to increase students' Reading Comprehension. This innovation is proposed in this research to create a fun and fresh learning process for students, also to figure out the effectiveness of this media. By reading LINE Webtoon, which features a plethora of captivating tales across multiple genres, students are able to learn new vocabulary and increase their reading comprehension. This invention will assist students in comprehending the storyline of a narrative text, structure

of narrative text, and moral value so the targets and purposes of the syllabus can be achieved. Furthermore, expanding vocabulary motivates students to take an active role in their learning experience and boosts their desire to learn the material.

Several studies have shown that the use of English webtoons has a positive impact on reading comprehension. First, Shim (2020) that webtoons can boost students' interest in reading and are a useful tool for teaching English. In addition to reading the text, students can view engaging stories and vibrant illustrations. Next, Supitri (2019) showed that English cartoon webtoons are influencing students' interest in reading. Students will have more fun reading web comics.

Considering the background above, the researcher believes that a proper media to improve reading comprehension is webtoon that make the learning and teaching process can be more enjoyable, fascinating, also challenging, as well as to keep students engaged in class. As a result, the researcher is interested to find out how Internet-Based Teaching Media might improve students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.

#### **B. *Research Question***

Based on the background of the study, the researcher develops the research question of this study is how is the effect of Internet-Based Teaching Media on increasing students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.

### **C. Research Objective**

Based on the research question above, the objective of this study is to figure out the effect of Internet-Based Teaching Media on increasing students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.

### **D. Research Significances**

The result of this research is expected to provide significant contribution both theoretically and practically.

#### **1. Theoretical Significance**

Theoretically, this research is expected to be a reference and provide additional knowledge about the process of teaching and learning, particularly for reading comprehension. This research also will give significant contribution in improving reading comprehension by implementing Internet-Based Teaching Media.

#### **2. Practical Significances**

##### **a. Teacher**

For the teacher, this research gives information for them about teaching students' reading comprehension by applying Internet-Based Teaching Media. English teachers can expand the variety of media used to teach reading. English teachers can use the media to provide students with solutions, particularly in reading comprehension.

##### **b. Students**

For the students, they can acquire strategy from this research to better understand English learning, especially reading comprehension.

Internet-Based Teaching Media can help them to improve their reading comprehension in the classroom. Because of this, students are more motivated than ever to learn English, and they believe that it is not a difficult language.

c. Readers or Other Researchers

For readers or other researchers, the utilization of Internet-Based Teaching Media can assist researchers in determining how to effectively teach language toward media which is interesting and useful. It also contains information that can be the reference in boosting creativity in the learning process, particularly when teaching reading.

**E. *Research Scope***

The scope of this research is to teach reading comprehension in narrative text by using Internet-Based Teaching Media. The researcher chose LINE Webtoon as the media used in this research. Researcher point out that there are five levels of reading that students must learn and master: literal comprehension, inference comprehension, evaluative comprehension, reorganization comprehension, and appreciative comprehension.

**F. *Operational Definition of Terms***

In order to avoid misunderstandings regarding the concepts employed, the researcher must define the following terminology in order to avoid confusion, which are as follows:

1. Internet-Based Teaching Media

Internet-Based Teaching Media is one type of instructional resource that keeps up with advances in science and technology. An inventive teaching tool that can serve as a reference for fresh ideas on how to conduct an engaging and productive learning process is internet-based media (Sholekhah, 2021).

## 2. Reading Comprehension

Healy (2002) defined Reading Comprehension as an understanding of the written word, understanding what you read, and constructing the meaning of the text.

## **CHAPTER II**

### **LITERATURE REVIEW**

This chapter presented previous related research findings, pertinent ideas, theoretical framework, and hypothesis.

#### **A. *Previous Related Research Findings***

There are some findings that the researcher attaches related to this research as followed:

Erwinda, F. Y., Ashari, A., Wardani, E., & Kariad, M. T. (2021) carried out a study with the aim of determining whether using online reading resources as English teaching materials could considerably increase students' reading comprehension when they were receiving instruction online during the COVID-19 pandemic in 2020. Pre- and post-test results (quantitative) and interviews and observation (qualitative) were used to gather the data. The study's findings demonstrated that using reading materials from the internet for online English instruction could considerably increase students' comprehension of what they read. Additionally, the study demonstrated a notable improvement in the reading comprehension of the students. The experimental and controlled classes' Mann-Whitney test results serve as evidence for it.

The study was done by Novitasari (2023), the purpose of this study was to determine whether or not internet-based text material significantly affects seventh-grade SMP Wahidiyah students' reading comprehension when they scan and skim for information. The mean score before students were taught

using internet-based text material was 68.41, and the score after using internet-based text was 93.4, according to the results. At the significance level of 0.05, the t-score result was 17.59 and the t-table was 1.68. Additionally, the data shows that both the students' mean score and their score were raised. In light of the hypothesis and the analysis of the data, it can be said that the null hypothesis ( $H_0$ ) was rejected and the alternative hypothesis ( $H_a$ ) was accepted. This indicates that the seventh-grade students at SMP Wahidiyah had a significant impact on their reading comprehension skills when it came to scanning and skimming information from the internet.

Pahamzah, et al. (2020) carried out a study with the aim of determining how the eleventh grade students at Dwi Putra Bangsa Vocational School in Cimanggu Pandeglang Banten utilize the Quizizz application as a learning tool and what role smartphone games play in online learning. This study examines the educational generations that are currently teaching and the ways in which they have influenced the changes in education. The study's findings demonstrated that using Quizizz as a learning tool can encourage students to participate enthusiastically in class activities, allowing them to concentrate and make the most of their mobile devices as enjoyable learning tools. Students' reading comprehension skills in English language learning will benefit from the concept of maximum learning. Thus, it will enhance students' academic performance.

Pujiastuti (2019) carried out a study with the aim of determining how webtoon can improve students' understanding of narrative texts and the

author's goals. An English teacher participated in the study, and fifty students were split into two groups: an experimental class and a controlled class. This study's sample was chosen conveniently. A reading assessment and a closed-ended question are the two instruments utilized in this investigation. First, the difference is significant according to the first research question. Second, students enjoyed learning about narrative text reading material by employing the webtoon digital comic technique. They were motivated and faced new challenges to improve their reading skills.

Ningsih (2021) carried out a study with the aim of elucidating the impact of including webtoon cartoons in reading instruction on students' media responses and reading comprehension. The subjects of this study were 12<sup>th</sup> graders. The method of data gathering used in this study is a descriptive qualitative design. As a result, methods for gathering data included interview procedures, questionnaires, and observation. Data were gathered and analyzed during the teaching-learning process using interviews and observations. The data-driven findings indicated that the webtoon comic approach to reading instruction was effectively implemented and stimulated students' interest in reading text. The students' assignments indicated that most students could easily understand the texts, and the students' responses indicated their interest in learning to read the texts using digital media, i.e. webtoon cartoons.

The majority of those studies that the researcher has explained above have a related study with this research where it discussed about the

implementation of Internet-Based Teaching and Learning Media to improve Reading Comprehension. However, there are some differences between the previous research and this research such as this research was focused on the effect of using Internet-Based Teaching Media that is LINE Webtoon on students' Reading Comprehension in narrative text and pointed out five levels of reading comprehension: literal comprehension, inference comprehension, evaluative comprehension, reorganization comprehension, and appreciative comprehension. Therefore, this research was conducted at the eleventh grade students of MAN 3 Makassar.

## **B. *Pertinent Ideas***

### **1. Media**

Media is all forms and channels used to distribute messages or information. In general, media can be defined as a method of communication. Meanwhile, in educational terms, according to Ritakumari (2017), media is a kind of communication that conveys information for educational purposes in order to teach and learn. Furthermore, anything that can be utilized to elevate the learning process and stimulate students' abilities, skills, and thoughts is considered media for educational purposes (Mclain, 2019). These definitions lead to the conclusion that media are means of communication that aid in the process of education for students.

Media for educational purposes has a role to create innovation and creativity to support the education environment to continue to improve the learning process. For the teacher, media can help them to create innovative

learning media and create conducive nuance for students in the learning process (Bali et al, 2021). The purpose of media in education is to help from the introduction of a lesson to the evaluation of the lesson itself. For example, media can be used to provide concrete experience as a basis of thinking, reasoning, and problem solving (Ritakumari, 2017). This can be concluded that media in education and learning process has a positive impact to create innovation and development.

Moreover, the media has several advantageous in learning process such as (Rivai & Sudjana, 2013):

- a. Media help the student to be more focus and motivation in learning process.
- b. Students can accomplish their learning objectives more quickly and effectively with the aid of the media.
- c. There will be more innovation in the use of media in the process of learning and teaching. By increasing student motivation, this will help teachers to teach them in an efficient way.
- d. Media helps the students to have several experiences in the learning process such as observing the media, improving their ability, and increasing their critical thinking.

## **2. Internet-Based Teaching Media**

In general definition, the internet can be defined as a techno-social system to enable humans to interact based on technological networks, in other words, the standard way to access and transmit data online in the form of

websites and hyperlinks. The internet is helpful for the users to connect easily through personal computers and local phone numbers, exchange information in a fast period of time, and access diverse perspectives from around the world (Castro et al., 2021). Meanwhile, teaching media can be defined as valuable instructional tools that can help make learning more effective and interesting. The teaching media can be objects, pictures, or other things that can be helpful as instructional media to present and engage student involvement in the learning process (Harmer, 2007). Based on these definitions above it can be concluded that Internet-Based Teaching Media is a media used in the learning process through the internet in order to engage student involvement and activeness in the learning process.

Furthermore, Internet-Based Teaching Media that can be useful to improve student's ability in various media such as video conference, audio streaming, online real-time chat, website content. Also, as Internet-Based Teaching Media also can be used to retrieve and access information as the "world wide web" is a virtual library which contain various information related on the topic on learning process (Kamal, 2017). Based on the explanation of Grey (1999) there are four basic application of Internet-Based Teaching Media namely:

- a. Search for and receive, this application in learning process is based on activity to utilize the internet as a huge virtual library. Student are able to search for and retrieve information from unlimited source related to the learning material that be discussed in classroom.

- b. Publish and provide, this application in learning process does not involve the retrieval, but publishing information that involves the student's writing skill. Students can write short essays and publish on web pages as a common place to store information on the internet as a term of providing information.
- c. Talk to and reply, this application in the learning process is utilized by e-mail or chatroom to do conversation between students.
- d. Collaborate and learn, this application is involving other classes or other schools to collaborate in the learning process using the internet as teaching media such as online class rooms that help students to meet other students from different schools that might be thousands of miles apart.

Implementing Internet-Based Teaching Media in the classroom requires careful planning and an understanding of how to used media and resources effectively. Teachers must thus take step back and focus on some basic pedagogical requirements. According to Kamal (2017), the following guidelines are designed to help teachers implement Internet-Based Teaching Media into the classroom:

- a. Identify Learning Objectives

Determine the learning objectives to be achieved by using internet-based teaching media. Then, ensure that the use of it supports the achievement of the learning objectives.

- b. Select Appropriate Content

Select learning materials that can be enhanced with internet-based teaching media. Then, ensure that the selected content is relevant and appropriate to the learners' level of understanding.

c. Select the Right Type of Internet-Based Teaching Media

Determine the most appropriate type of internet-based teaching media to convey the information. This could be videos, images, animations, simulations, or a combination of several types. Then, ensure that the chosen media supports the learning objectives and learning style of the learners.

d. Integrate Internet-Based Teaching Media with the Learning Context

Insert internet-based teaching media in the learning context naturally. Then, ensure that the media is an integral part of the learning experience, not just an add-on.

e. Create Interactive Experiences

Create interactive activities that allow learners to actively engage. Examples include multiple choice, essay, true or false questions, and other interactive activities. Ensure, interactivity supports understanding of concepts and provides a meaningful learning experience.

f. Facilitate Discussion and Collaboration

Use internet-based teaching media as a stimulus for discussion and collaboration. Enable collaborative features such as discussion forums or joint projects linked to internet-based teaching media materials.

g. Test the Effectiveness of Internet-Based Teaching Media

Before using in a learning session, test the effectiveness of internet-based teaching media to ensure that it can be adapted to the audience and achieve the learning objectives. Also provide feedback from learners for further improvement.

#### h. Evaluation of Learning

During and after the use internet-based teaching media, evaluate learners' understanding. Then, use the data for further customization and improvement.

### 3. LINE Webtoon

**Figure 2.1 LINE Webtoon Logo**

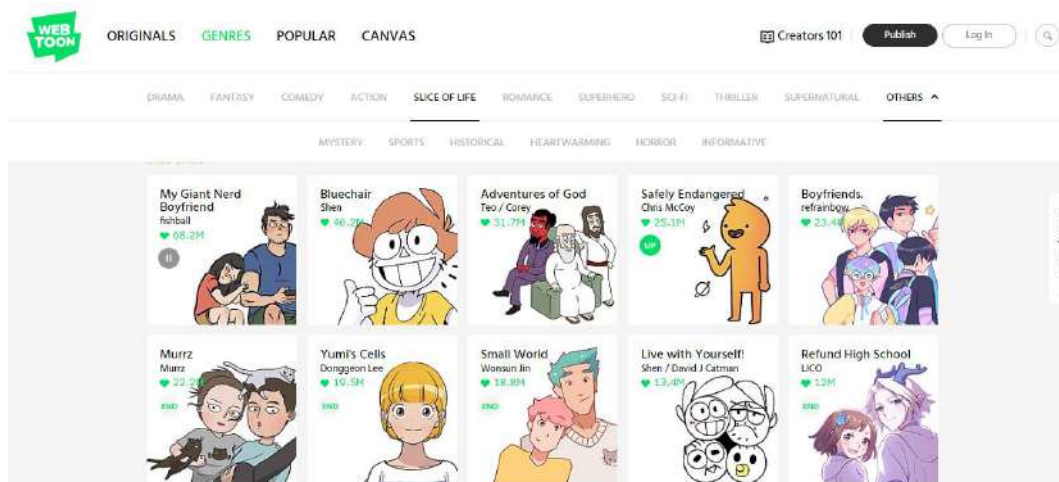

Webtoon is a word that combines web and cartoon (comic). LINE Webtoon refer to Korean webcomics or cartoons published online. This website in South Korea, Daum, launched webtoon service in 2003, and in 2004, it was followed by Naver. These services regularly release free webtoons. As digital comics became more popular, paper comics (manhwa) publications declined. The amount of works published on webtoons has reached the same amount as the amount published offline. LINE Webtoon or online comics are a popular form of entertainment for all ages. They enjoy reading with graphics and colors that capture their interest.

LINE Webtoon are also classified as a type of classroom education material. Furthermore, comics are widely acknowledged as a captivating and inspirational media. Arlin and Roth (1978) assert that comics are engaging and that students are more likely to focus on engaging material than on uninteresting stuff.

LINE Webtoon is one of the tools that teachers can use to make their lessons more engaging. In this case, LINE Webtoon is a free and readable application that is very easy to use. According to Darmawanti (2022), the stages of utilization LINE Webtoon application in reading learning are as follows:

- a. Teachers and students download the LINE Webtoon application from the App Store or Play Store, or they can also read the web version on *www.webtoons.com*.
- b. Teachers and students create their own accounts (sign in) or login if they already have an account with their email address or other available options.
- c. Teachers and students choose several genres that they are interested in so that the stories that appear on their homepage match their interests.
- d. Teachers can choose genres or titles that are appropriate for students' abilities and development.
- e. If students are allowed to choose the stories they want to read, the teacher should guide, direct, and control the students' work and behaviour.

**Figure 2.2 The Variations of Story Genres in LINE Webtoon**

LINE Webtoon include a wide range of stories such as slice of life, humor, action, mystery, thriller, adventure and romance. Therefore, LINE Webtoon is a medium that is fun for students and can cultivate their imagination at the same time. Therefore, students need media that inspire and engage their ideas so that they can more easily retain language. Therefore, media that make learning more fun are expected.

#### **4. Definition of Reading**

One of the most crucial language learning abilities is reading, along with writing, speaking, and listening. Reading is useful for language acquisition (Harmer, 2007). If students comprehend the majority of what they read, then their comprehension improves with increased reading. Reading is a vital life activity that keeps people's knowledge current. In many contexts, reading is a crucial ability, particularly in the classroom (Grabe, 2009). Students now have a lot of reading to do because everything is written down. For the purpose of comprehending the text's content, students should be proficient readers.

In addition, as Nunan (2003) stated reading is a fluid process where readers derive meaning from the text by fusing information from it with what they already know. This indicates that the reader's prior knowledge affects the reading process and determines whether or not they can understand what they are reading. Experts assert that while there are differences in reading comprehension, the fundamentals remain the same. Making connections between what you already know and the ideas on the page is the goal of reading (Klingner, 2007).

### **5. The Process of Reading**

As explained below, there are three different kinds of reading processes according to Hudson (2007) and Brown (2001).

#### **a. Bottom-Up Processing**

In bottom-up processing, readings are considered as phoneme units. Readers create meaning by reading each letter. This is done by identifying words passed from one person to the next. This process is extended by connecting clauses, subclauses, and sentences. Lastly, it is divided into phoneme units that have lexical meaning and contribute to the text's partial understanding. The method, which is mostly based on line processing, aids readers in identifying words and expanding their mental vocabulary. What matters is not how the reader interprets the book, but how they read it.

#### **b. Top-Down Processing**

At the beginning of the procedure, the reader makes some text predictions. The predictions are then verified or disproved by taking samples.

The steps involved in turning text into meaning are as follows. At the conclusion of the process, the reader makes some changes to the forecast. In actuality, top-down processing gives the reader's past reading comprehension priority.

c. Interactive Processing

The process through which the text's content interacts with the reader's existing knowledge is known as interactive processing. The top-down and bottom-up processing methods that were previously used are combined in this approach. As they read, the reader reveals prior knowledge of the details provided in the text. In light of this, in an interactive process, readers not only recognize words but also anticipate the information that is offered to construct meaning.

## **6. Types of Reading**

Brown (2004) identifies four distinct classifications of reading proficiency, each accompanied by a distinctive assessment procedure: perceptive reading, selective reading, interactive reading, and extensive reading.

a. Perceptive Reading

With this type of read performance, bottom-up processing is the main goal of the reading process. Learn to recognize words, punctuation marks, alphabetic symbols, lowercase and uppercase letters, and grapheme-phoneme correspondences. Perceptive reading assessment tasks include written responses, multiple choice, picture-based, and reading aloud exercises.

#### b. Selective Reading

With this type of read performance, read operations combine top-down and bottom-up processing techniques. Grammar rules and vocabulary are the main topics of this evaluation. Assessment tasks that are designed to measure selective reading include multiple choice, matching, editing, image-based, fill-in-the-blank, and matching tasks.

#### c. Interactive Reading

This type of reading focuses on formal and semantic orientation, but on understanding meaning. Types of interactive reading assessment tasks, including gap-filling, impromptu reading and comprehension questions, short answers, editing, scanning, task sequencing, and communication.

#### d. Extensive Reading

The read process becomes a top-down process with this kind of read performance. Types of evaluation assignments for in-depth reading: scan the task, summarize and reply, take notes, and create an outline.

According Wright (1999), reading skills can be divided into four categories: scanning, intensive reading, extensive reading, and skimming.

#### a. Skimming

Skimming quickly scans a piece of text to see if it is general content. This gives people the freedom to decide what information to read and what to discard.

#### b. Scanning

Instead of reading everything come across, scanning entails reading to find specific information. For example, look up phone numbers in directories.

c. Intensive Reading

When reading intensively, the reader makes an effort to take in everything the author has to say. Example: read the instructions for the dosage of the medicine.

d. Extensive Reading

When reading lengthy texts in their entirety, readers must be able to comprehend each section and how it adds to the overall meaning. Example: reading newspaper articles, short stories and novels.

Perceptive reading, selective reading, interactive reading, extensive reading, intensive reading, scanning, and skimming are just a few of the various types of reading, as explained by Brown and Wright above. In this part, the researcher came to the conclusion that reading comprehension through LINE Webtoon is include in extensive reading types.

## **7. Definition of Reading Comprehension**

According to the Simple View of Reading framework, linguistic understanding and word decoding combine to provide reading comprehension. Additionally, reading comprehension is a task that calls for the coordination of several language and cognitive processes, including vocabulary, working memory, inference generation, word reading proficiency, comprehension monitoring, and prior knowledge (Gough & Tunmer, 1986).

The explanation of several major components in reading components is as follows (Recht & Leslie, 1988):

- a. Interference generation, the capacity to combine information from different texts or within one while using prior knowledge as a special indicator of reading comprehension.
- b. Vocabulary, the knowledge of word meanings to determine word in certain context with appropriate meaning.
- c. Prior knowledge, well connected memory as prior knowledge of the subject matter that facilitates pertinent comprehension and learning to support students' growth and inference-making skills.
- d. Affective aspects, student attitude and interest toward reading process to increase motivation and elevate reading comprehension.

Furthermore, reading comprehension can be described as the process by which a reader learns about a concept, comprehends it in light of its empirical context, and interprets it in light of his or her own needs and objectives (Khoiriyah, 2018). It means that reading comprehension gains meaning, understanding and enjoyment. To achieve reading comprehension, readers must adopt several strategies. According to May (2001), there exist seven distinct strategies for comprehending. A reader ought to:

- a. Assume the next few words.
- b. Verifying their prediction.
- c. Modifying their prediction if required.
- d. Addressing their own errors.

- e. Making substitutions that help us understand the author's intent better.
- f. Modifying the author's language to sound more like their own by adding and removing words.
- g. Using words or phrases to stand in for thought time.

According to Klingner et al. (2007), reading comprehension is a complex process involving numerous interrelated components. These elements include the reader's knowledge, prior knowledge, reading techniques, text, topic interest, and text type. These elements work together to comprehend written language. Readers find it challenging to read these exchanges because of the confusion they cause.

In addition, Saiful (2019) stated that students should receive ongoing instruction in reading comprehension at the literal, interpretive, and critical levels of comprehension. Additionally, reading comprehension skills and strategies are meant to support and enhance students' reading abilities (Saddleback, 2002).

## **8. Levels of Reading Comprehension**

There exist five distinct levels of reading comprehension. According to Pourkalhor & Kohan (2013), reading comprehension frequently varies depending on the reader's reading goals and the kind of reading that is done. The terms listed below are frequently used:

- a. Level One: Literal Comprehension

The ability to directly comprehend the meaning of an English text, including the vocabulary used, the location within the text, and the time and

place settings, is known as literal comprehension. Every text contains explicit information. This leads us to the conclusion that reading the entire text is sufficient to search for existing information at the level of literal understanding.

Answers to questions taken directly out of the text must be clear and concise in order to ensure literal comprehension. Literal comprehension is a fundamental ability because it forms the foundation for more complex comprehension.

b. Level Two: Inference Comprehension

An idea or conclusion that is derived from logic and evidence is known as an inference. The benefit of having conclusions is that they enable the reader to comprehend the meaning and intent of the text on a deeper level. To understand the text within the reading at this level, the reader must read between the lines. Understanding the facts is crucial, even if they aren't stated clearly in the reading material. Think about responses to inquiries that start with "why and how", because answers to such questions are required, or their implied meaning must be understood.

c. Level Three: Evaluative Comprehension

Readers must look beyond the text and consider their own opinions and beliefs regarding the text's message in order to demonstrate evaluative comprehension. It also requires a deeper understanding of the subject matter. This includes analyzing and weighing the author's intentions, opinions, language, and presentation style. This includes evaluating the adequacy of the

means used by the author to achieve his goals and drawing conclusions based on the facts and ideas contained in the events and reading material.

d. Level Four: Reorganization Comprehension

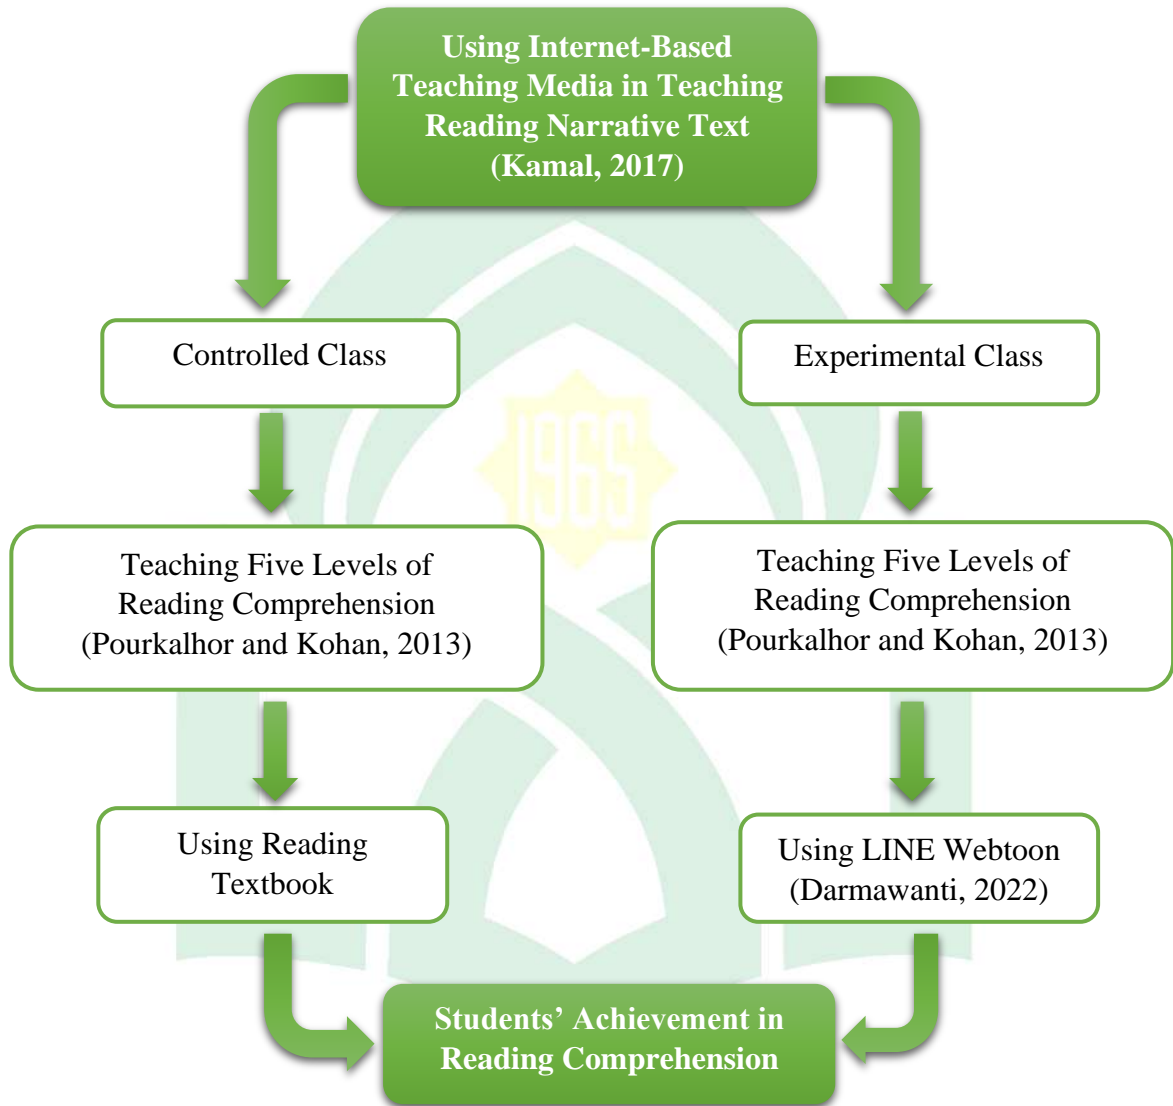

Readers at this level must be able to recognize and interpret implicit information in the material they are reading in addition to literal comprehension. As a result, depending on reader's comprehension, they should be able to understand the text's key themes a little better at this level. It takes some imagination and curiosity to understand reorganization. It also calls for the capacity for in-depth analysis, processing, evaluation, and perspective-building of events and circumstances.

e. Level Five: Appreciative Comprehension

From the clues mentioned in the text, the ability to understand the primary goal of this reading and the author's point of view is valued. To succeed at this level, students need to understand that the appreciation level answer is in their own head, not in the text, and that it is entirely their opinion.

Reaching a comprehensible level of reading comprehension means that the reader fully comprehends the literal meaning of what they read, carefully assesses the situation, and can use the ideas they collect to apply them to real-life events or similar situations.

### C. Theoretical Framework

**Figure 2.3 Theoretical Framework**

The theoretical framework describes how to conduct research procedures. The researcher was used Internet-Based Teaching Media in teaching students' Reading Comprehension of the eleventh grade at MAN 3 Makassar. Based on the framework provided, this stages was used the experimental method.

The first stage was for the researcher divide the population into two classes: the controlled class and the experimental class. The researcher forms or selects classes used purposive sampling method and decides how to give treatments to each class. At this point, the researcher used LINE Webtoon as an Internet-Based Teaching Media to provide the experimental class a new treatment, while the controlled class received treatment using reading textbook.

The second stage was that the researcher taught about narrative texts that focus on five levels of reading comprehension: literal comprehension, inference comprehension, evaluative comprehension, reorganization comprehension, and appreciative comprehension. At this stage, the researcher provided the same material for both classes. The researcher taught the narrative text material for both the controlled class and the experimental class.

In the third stage, the researcher started implementing Internet-Based Teaching Media, which is LINE Webtoon. Gay (2019) stated that a common misconception is that a controlled class always receives no treatment, but a group with no treatment would rarely provide a fair comparison. However, the researcher used LINE Webtoon as Internet-Based Teaching Media into experimental class and the reading textbook into controlled class with the same treatment, those giving pre- and post-test.

Finally, the researcher saw how the effect of Internet-Based Teaching Media that is LINE Webtoon on increasing students' Reading Comprehension

by comparing the students' achievement in pre- and post tests. At this stage, the researcher measured students' ability in reading and see which one is more better for students, whether LINE Webtoon or the reading textbook.

#### **D. Hypothesis**

The study's hypothesis is not its final answer. It is an alternative answer that requires confirmation. In order to validate a hypothesis, empirical research must be conducted first. The research's hypotheses are:

1. Null Hypothesis ( $H_0$ ) : There is no significant effect of using Internet-Based Teaching Media on students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.
2. Alternative Hypothesis ( $H_1$ ) : There is a significant effect of using Internet-Based Teaching Media on students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.

## **CHAPTER III**

### **RESEARCH METHOD**

This chapter presented research method, which includes research design, population and sample, research instrument, data collecting procedures, and data analysis technique.

#### **A. *Research Design***

This research took a quantitative method with a quasi experimental design. According to Wiersma and Jurs (2009), quasi-experimental design is an approximation of an actual experiment utilizing non-randomly determined class. A quasi-experimental design was used in this research to evaluate the causes and effects of two variables that were reflected in both controlled and experimental classes (Mills & Gay, 2019). This research used two classes of eleventh grade students from MAN 3 Makassar to compare the pre-test and post-test results of the two classes to determine the effectiveness of LINE Webtoon. The effectiveness could be shown in the students' mean scores of the experimental class in the post-test after treatment, as well as the computation of the classes' acquired scores.

#### **B. *Population and Sample***

##### **1. *Population***

Population is understood to mean the entire study object. Gay (2019) stated that the target population includes the individuals that researchers wish to generalize ideally, while the available population includes the individuals that researchers has realistically chosen. The population of this

study was the eleventh grade students at MAN 3 Makassar, specifically 2023/2024 academic year social class students. The totals of eleventh grade students in social class are 108 students.

**Table 3.1 The Population of Research**

No.	Class	Total
1.	XI IPS 1	27
2.	XI IPS 2	27
3.	XI IPS 3	28
4.	XI IPS 4	26
Total		108

## 2. Sample

Purposive sampling was utilized to choose the sample in this research. It is used by researcher to obtain sample classes that match the specified criteria. The criteria determined to obtain the sample class in this study are:

- a. Two classes with the highest English learning results in the 1st midterm exam for the 2023/2024 academic year.
- b. Both classes were more active and responsive in the learning process.
- c. The class with the lower pre-test result becomes experimental class.
- d. The class with the higher pre-test result becomes controlled class.

Based on the criteria, the researcher chose XI IPS 1 and XI IPS 2 as sample classes. Then, by looking at the results of the pre-test, the researcher determined XI IPS 1 which had lower pre-test result as the experimental class and XI IPS 2 which had higher pre-test result as the controlled class. So there were a total of 54 students as sample.

### **C. *Research Instrument***

According to Gay (2019), research instrument is the tools used to collecting and analysing data in research. A reading test was used in this study and administered as a pre-test and a post-test. These tests were administered to both classes before and after treatment, with the experimental class using Internet-Based Teaching Media that is LINE Webtoon and the controlled class using reading textbook. Ary et al. (2010) define a test as a set of stimuli given to an individual with the goal of eliciting a response that can be assigned a numerical score. The format of the test used was multiple choice question.

### **D. *Data Collecting Procedures***

Procedures for gathering data describe how the researcher collects the data. To collect data from the sample, the researcher took the following steps:

1. Pre-Test

The purpose of the pre-test was to evaluate students' beginning reading abilities and difficulties in narrative text before the treatment. The pre-test was administered to the controlled class on Wednesday, 30 August 2023. Meanwhile, the pre-test in the experimental class was held on Thursday, 31 August 2023. The pre-test format was multiple choice, with 40 questions overall. The pre-test questions were adapted from the internet. The pre-test had an allotted period of 80 minutes. After students completed the pre-test, the researcher graded students' answer and assessed their percentage to determine their reading comprehension.

## 2. Treatment

The treatment was carried out after students did the pre-test. In this research, treatment was administered in six meetings in each class, with experimental class and controlled class. In one meeting, treatment was given within 120 minutes. During treatment, the experimental class was taught narrative text material using Internet-Based Teaching Media that is LINE Webtoon to increase their reading comprehension. Meanwhile, the controlled class was taught using reading textbook. The treatment at each meeting in each class has been regulated in the lesson plan (See Appendix I, page 74-85). The table below shows the timeline of research implementation:

**Table 3.2 The Timeline of Research Implementation**

<b>Number of Meeting</b>	<b>Controlled Class</b>	<b>Experimental Class</b>
Meeting I	Wednesday, 6 September 2023	Thursday, 7 September 2023
Meeting II	Wednesday, 13 September 2023	Thursday, 14 September 2023
Meeting III	Wednesday, 20 September 2023	Thursday, 21 September 2023
Meeting IV	Wednesday, 4 October 2023	Thursday, 5 October 2023
Meeting V	Wednesday, 11 October 2023	Thursday, 12 October 2023
Meeting VI	Wednesday, 18 October 2023	Thursday, 19 October 2023

## 3. Post-Test

Students were given a post-test after the treatment to see if their comprehension of the narrative text had changed or improved. The post-test was given to the controlled class on Wednesday, 25 October 2023. Meanwhile, the post-test in the experimental class was held on Thursday, 26 October 2023.

The post-test questions, like the pre-test, were multiple choice, with a total of 40 questions. The test was scheduled to take 80 minutes to complete. The researcher graded students' answers after they finished the post-test. The data of the tests was then examined with IBM SPSS Statistics 26 to see whether the treatment had an effect on students' Reading Comprehension of narrative text.

#### **E. Data Analysis Technique**

The data collected in this research represented the results of students' tests, which were quantitatively analyzed. Creswell (2014) defines quantitative data analysis as a systematic method of gathering and analyzing measurable and verifiable data. It includes a statistical technique for evaluating or interpreting quantitative data.

In this study, quantitative analysis was carried out using data obtained from the results of the pre-test and post-test. The researcher used the formula below to score the correct answers of the students:

$$NA = \frac{\text{Students' Correct Answer}}{\text{Total Number of Item}} \times 100$$

Following that, the researcher classified the score of the students' answers using the assessment guidelines below:

**Table 3.3 The Classification of Reading Score**

<b>Classification</b>	<b>Score</b>
Very Good	81-100
Good	61-80
Fair	41-60
Poor	21-40

Very Poor	0-20
-----------	------

(Brown, 2004)

After classified the score, the researcher was percentaged the students' score classification with the formula:

$$P = \frac{\text{Frequencies}}{\text{Number of Students}} \times 100$$

Finally, the researcher used IBM SPSS Statistics 26 to aid with data analysis. The researcher used the T-test formula to determine the significant difference in students' reading comprehension.

## **CHAPTER IV**

### **FINDINGS AND DISCUSSION**

This chapter discusses the study findings, which are offered in the form of data descriptions, as well as the commentary, which discloses the argument and additional interpretation of the findings. In this chapter, the researcher analyzed and discussed data from pre- and post-tests in experimental and controlled classes.

#### **A. Findings**

##### **1. The Planning of the Research**

Before conducting research on students reading comprehension at MAN 3 Makassar, the researcher prepared some plans. After gaining permission to conduct study, the researcher discussed with the English teacher at MAN 3 Makassar about the class that would be the source of research data. The researcher chose the XI IPS 1 and XI IPS 2 courses as the research sample after careful evaluation. Following that, the researcher selected the material to be provided, that is narrative text. In this regard, the researcher inquired of the teacher about the syllabus of narrative text material. Then, the researcher made lesson plans based on the syllabus used at school and created them by using the media to be researched, namely LINE Webtoon which is included in Internet-Based Teaching Media. The researcher made lesson plans for 6 meetings in each class and discussed the lesson plans with the teacher before running in the classroom. In addition, researcher also prepared questions that would be used for pre-test and post-test. The

researcher made the questions by adopting the model of questions tested at school on narrative text material. The researcher asked the teacher for the school exam questions and made it a guideline in making pre- and post-test questions. In addition, researcher also varied the questions by adapting narrative text questions on the internet. The researcher made the questions in the form of multiple choice with 40 numbers.

## **2. The Implementation of the Research**

### **a. Pre-Test**

The researcher administered the pre-test to assess students' initial reading abilities and challenges, particularly on narrative text material. The researcher offered students 80 minutes to complete the test. On Wednesday, August 30, 2023, a pre-test in class XI IPS 2 was held. Students were serious and focused while working on the pre-test. Although some students still ask their pals, the researcher persuades them to do it on their own. The researcher also advised students that if they had a question, they should ask the researcher rather than their pals. However, the overall environment during the pre-test in class XI IPS 2 can be described as conducive.

Meanwhile, the pre-test for class XI IPS 1 was held on Thursday, August 31, 2023. As before, researcher given a time limit of 80 minutes for students to finish the questions. Unlike in the prior class, students did not appear to be serious in working on the test assigned. Some students seemed uninterested after seeing the question, which presented a fairly long narrative text, thus they completed it carelessly. Some others didn't even read the

questions and filled out the answer sheet right away. The researcher has tried to encourage students to take the test seriously and work with their respective abilities, but from the beginning the students appeared discouraged to do the pre-test.

After administering the pre-test in both classes, the researcher examined the students' answer. The average pre-test score for the XI IPS 1 class was 38.88, while the XI IPS 2 class was 60.55. Based on these findings, researcher can conclude that one aspect, student motivation in the classroom, has an impact on the pre-test results. From this data, the researcher also determined the division of classes for research, where the class with lower scores became the experimental class and was taught using Internet-Based Teaching Media, namely LINE Webtoon, while the class with higher scores became the controlled class and was taught using reading textbook media.

#### **b. Treatment**

Researcher carried out treatment following the completion of the pre-test. The experimental and controlled classes were treated as described below:

##### 1) Treatment on Experimental Class

The first meeting started on Thursday, September 7, 2023. The researcher began the learning process by greeting the students, praying, and checking attendance. The researcher then informed what material would be learned and motivated the students about the purpose and benefits of learning the material. The researcher also informed the learning strategy, allowing for a more guided learning process. Following that, the researcher displayed the

barcode on the whiteboard using the projector so that students could more easily access the story on LINE Webtoon entitled "Cherry Blossoms". This is a romance webtoon about a man who regrets not communicating his feelings to the person he likes. The researcher chose this title to read and discuss at the first meeting in order to pique students' interest and instill the notion that stories on LINE Webtoon are entertaining and tailored to their preferences. Furthermore, this webtoon contains only 7 episodes that may be read in a single meeting. The researcher asked students to read and comprehend the story. The researcher then provided worksheets to students to test their understanding of the stories they had read. After the students have finished working on the worksheet, the researcher and students will discuss it. The researcher asked some students to explain how they understood the story, and then asked other students to comment on any differences in understanding. During this session, the researcher was in responsibility of ensuring that students understood the story they had read. Following the discussion session, the researcher and the students made conclusions from their first meeting. The researcher also praised the students for their active participation in the learning process. Before the meeting ended, the researcher assigned students to read the story "Annie Green Hates Girls" at home. This was done because the story contains a large number of episodes, which is 43 episodes. The researcher asked students to read half of the story at home before continuing at the next meeting.

The second meeting started on Thursday, September 14, 2023. The researcher began the meeting with the same steps as the previous one. In this meeting, the researcher divided the students in the class into 5 groups. After students had formed their groups, the researcher instructed them to continue reading the story "Annie Green Hates Girls". Students conducted in the group read the story. After reading the story, the researcher distributed worksheets to each group. In this meeting, they discussed some questions regarding generic structure of the story. This type of assignment allowed the researcher to assess students' comprehension of the reading in general. Students discussed with one another while working on the worksheets provided, explaining their distinctive perspectives on their comprehension of the stories read. After the students finished working on the worksheet, the researcher led a discussion. During the discussion, the researcher requested one of the people in responsible for each group to share the findings of their discussion. The researcher acted as a moderator, organizing the discussion. If there were any disagreements among the group, they were free to argue. After the discussion session ended, the researcher and the students concluded the learning at this meeting.

## 2) Treatment on Controlled Class

The first meeting began on Wednesday, September 6, 2023. The researcher started the learning by saying greetings, praying, and checking attendance while asking how the students were doing. The researcher then informed what material would be learned and motivated the students about

the purpose and benefits of learning the material. The researcher also informed the learning strategy so that the learning process could be more directed. After that, the researcher started the learning by asking students to open their textbook. In this first meeting, they read a story entitled "The Big Family in the Little House". Before starting to read the story, the researcher asked the learners to pay attention to the illustrations available regarding the title. The researcher then asked some questions to the learners related to the illustration and the learners answered the questions asked. Next, the researcher asked learners to read and understand the story "The Big Family in the Little House". After the students finished reading, the researcher distributed worksheets to the learners. Learners worked on the worksheets individually and answered the questions according to their own understanding. After all students had finished working on the worksheet, the researcher and students discussed the results of the work. The researcher asked some students to explain their understanding of the story, then asked other students to comment if there were differences in understanding. After the discussion session was over, the researcher together with the students drew conclusions from the first meeting. The researcher also appreciates students who play an active role in learning.

The second meeting began on Wednesday, September 13, 2023. The researcher started the meeting with the same steps as in the previous meeting. After that, the researcher asked students to open their textbook. In this meeting, they read a story entitled "The Wolf and the Dog". Before starting to

read the story, the researcher asked the learners to pay attention to the illustrations available regarding the title. The researcher then asked some questions to the learners related to the illustration and the learners answered the questions asked. Next, the researcher divided the students in the class into 5 groups. After gathering with their respective groups, the researcher asked learners to read and understand the story "The Wolf and the Dog". After the students finished reading, the researcher distributed worksheets to each group. Then, learners in the group worked together on the worksheet. They seriously discussed, expressed their understanding of the story to answer the questions on the worksheet well. After all groups finished working on the worksheet, the researcher and students discussed the results of the work. The researcher asked representatives of each group to present their work. Then the researcher also invited other students to comment or even give appreciation to each other. After the discussion session was over, the researcher together with the students drew conclusions from this meeting.

### **c. Post-Test**

The post-test was carried out by researcher to evaluate students' ability to read specifically narrative text material after being given treatment for 6 meetings. The researcher gave a time limit of 80 minutes for students to work on the questions. Before students started working on the questions, the researcher had given clear instructions. The post-test in the control class was held on Wednesday, October 25, 2023. Unlike when doing the pre-test, the atmosphere can be said to be not conducive. This happened because students

realized that the questions tested were identical to the pre-test questions. This made students talk to their classmates and try to compare their answers. The researcher has tried to give a warning and ask students to work on their own. However, students continued to give each other hints and exchange answers in a hidden manner to get better results.

Meanwhile, the post-test in the experimental class was held on Thursday, October 26, 2023. Just like before, researcher set a time limit of 80 minutes for students to complete the questions. The atmosphere in the experimental class can be said to be more conducive than the control class. It was also different from when doing the pre-test, where students seemed not eager to read the questions given. When doing the post-test, the classroom was calm and students seemed to focus on reading the question sheet. There was no noise or noise that could disturb the concentration of other students. There were also no attempts to ask and give each other answers.

After the post-test was carried out in both classes, the researcher examined the students' work. It was found that the average post-test score of XI IPS 1 class as the experimental class was 91.75 and XI IPS 2 class as the controlled class was 78.70. Seen from the data, there is an increase in scores in both classes. However, there was a drastic increase in the experimental class. The researcher concluded that this happened because of differences in student motivation when doing the pre- and post-test. From the results of the researcher's discussion with the English teacher as well, it is known that actually the two classes have abilities that can be said to be equal. However,

there are several factors, one of which such as motivation can affect the test results they get.

### **3. The Evaluation of the Research**

Evaluation is carried out to measure the extent of students success in the learning process. In this research, a post-test was given to students to measure how the effect of LINE Webtoon as Internet-Based Teaching Media in improving students' reading comprehension. After post-test implemented, the data obtained is then processed and interpreted in order to conclude the level of success of the treatment provided.

#### **a. The Data of Experimental and Controlled Classes**

The pre-test was administered prior to treatment to determine the students' initial skill in reading comprehension of narrative text. Meanwhile, after the students had treatment, the-post test was administered to determine the progress of the students' Reading Comprehension in narrative text. In this case, the experimental class taught utilizing LINE Webtoon as Internet-Based Teaching Media, whereas the controlled class taught utilizing reading textbook. Each class included 27 students, so the total number of students was 54 students. The test was multiple choice question consisted of 40 items about narrative text. The result of pre- and post-tests of both classes can be seen on table 4.1 and 4.2 as follows:

**Table 4.1 The Result of Experimental Class**

<b>No.</b>	<b>Students Number</b>	<b>Scores</b>	
		<b>Pre Test</b>	<b>Post Test</b>
1.	Student 001	35	90

2.	Student 002	30	82.5
3.	Student 003	25	80
4.	Student 004	32.5	87.5
5.	Student 005	47.5	97.5
6.	Student 006	42.5	97.5
7.	Student 007	47.5	97.5
8.	Student 008	35	92.5
9.	Student 009	35	92.5
10.	Student 010	42.5	97.5
11.	Student 011	30	82.5
12.	Student 012	50	97.5
13.	Student 013	42.5	97.5
14.	Student 014	40	95
15.	Student 015	<b>20</b>	<b>77.5</b>
16.	Student 016	<b>80</b>	<b>100</b>
17.	Student 017	37.5	95
18.	Student 018	32.5	85
19.	Student 019	45	97.5
20.	Student 020	27.5	80
21.	Student 021	<b>20</b>	<b>77.5</b>
22.	Student 022	47.5	97.5
23.	Student 023	52.5	97.5
24.	Student 024	37.5	95
25.	Student 025	40	97.5
26.	Student 026	40	97.5
27.	Student 027	35	92.5

As stated above, the table shows the students' individual scores of pre- and post-tests in experimental class. The maximum score in pre-test was achieved by student 016 with 80 total score and the minimum score was achieved by students 015 and 021 with 20 total score. Meanwhile, the maximum score in post-test was achieved by student 016 with 100 total score and the minimum score was achieved by students 015 and 021 with 77.5 total score.

**Table 4.2 The Result of Controlled Class**

No.	Students Number	Scores	
		Pre Test	Post Test
1.	Student 001	67.5	92.5
2.	Student 002	72.5	95
3.	Student 003	70	95
4.	Student 004	72.5	<b>100</b>
5.	Student 005	<b>82.5</b>	<b>100</b>
6.	Student 006	70	95
7.	Student 007	57.5	67.5
8.	Student 008	37.5	50
9.	Student 009	77.5	<b>100</b>
10.	Student 010	<b>82.5</b>	<b>100</b>
11.	Student 011	72.5	97.5
12.	Student 012	75	<b>100</b>
13.	Student 013	67.5	90
14.	Student 014	40	55
15.	Student 015	70	92.5
16.	Student 016	70	92.5
17.	Student 017	62.5	87.5
18.	Student 018	52.5	55
19.	Student 019	55	57.5
20.	Student 020	55	57.5
21.	Student 021	37.5	55
22.	Student 022	57.5	65
23.	Student 023	62.5	77.5
24.	Student 024	62.5	70
25.	Student 025	62.5	87.5
26.	Student 026	<b>10</b>	<b>45</b>
27.	Student 027	32.5	<b>45</b>

As stated above, the table shows the students' individual scores of pre- and post-tests in controlled class. The maximum score in pre-test was achieved by students 005 and 010 with 82.5 total score and the minimum score was achieved by student 026 with 10 total score. Meanwhile, the maximum score in post-test was achieved by students 004, 005, 009, 010 and 012 with 100

total score and the minimum score was achieved by students 026 and 027 with 45 total score.

**b. Classification of Students' Scores**

1) Classification of Experimental Class Score

Tables 4.3 and 4.4 showed the classification of reading comprehension of the eleventh grade students at MAN 3 Makassar in pre- and post-tests scores in the experimental class.

**Table 4.3 The Experimental Class Score Percentage on the Pre-Test**

No	Range of Scores	Classifications	Frequencies	Percentages
1.	81-100	Very Good	0	0%
2.	61-80	Good	1	3.7%
3.	41-60	Fair	9	33.3%
4.	21-40	Poor	15	55.5 %
5.	0-20	Very Poor	2	7.5%
Total			27	100%

Based on the data in the table 4.3 there are some classifications according to the students score of pre test in the experimental class. The table above shows that there was no students categorized very good, 1 (3.7%) student categorized good, 9 (33.3%) students categorized fair, 15 (55.5%) students categorized poor, and 2 (7.5%) students categorized very poor.

**Table 4.4 The Experimental Class Score Percentage on the Post-Test**

No	Range of Scores	Classifications	Frequencies	Percentages
1.	81-100	Very Good	23	85%
2.	61-80	Good	4	15%

3.	41-60	Fair	0	0%
4.	21-40	Poor	0	0%
5.	0-20	Very Poor	0	0%
Total			27	100%

Based on the data in the table 4.4 there are some classifications according to the students score of post test in the experimental class. The table above shows that there were 23 (85%) students categorized very good, 4 (15%) students categorized good, and there is no students categorized fair, poor, or very poor.

## 2) Classification of Controlled Class Score

Tables 4.5 and 4.6 showed the classification of reading comprehension of the eleventh grade students at MAN 3 Makassar in pre- and post tests scores in the controlled class.

**Table 4.5 The Controlled Class Score Percentage on the Pre-Test**

No	Range of Scores	Classifications	Frequencies	Percentages
1.	81-100	Very Good	2	7.5%
2.	61-80	Good	15	55.5%
3.	41-60	Fair	5	18.5%
4.	21-40	Poor	4	14.8%
5.	0-20	Very Poor	1	3.7%
Total			27	100%

Based on the data in the table 4.5 there are some classifications according to the students score of pre test in the controlled class. There were 2 (7.5%) students categorized very good, 15 (55.5%) students categorized

good, 5 (18.5%) students categorized fair, 4 (14.8%) students categorized poor, and 1 (3.7%) student categorized very poor.

**Table 4.6 The Controlled Class Score Percentage on the Post-Test**

No	Range of Scores	Classifications	Frequencies	Percentages
1.	81-100	Very Good	15	55.5%
2.	61-80	Good	4	14.8%
3.	41-60	Fair	8	29.7%
4.	21-40	Poor	0	0%
5.	0-20	Very Poor	0	0%
Total			27	100%

Based on the data in the table 4.6 there are some classifications according to the students score of post test in the controlled class. There were 15 (55.5%) students categorized very good, 4 (14.8%) students categorized good, 8 (29.7%) students categorized fair, and there is no students categorized poor or very poor.

### **c. Data Analysis Result**

There were some tests used to analyze pre- and post-tests data from the experimental and controlled classes. The data was analyzed using IBM SPSS Statistics 26. Some of the tests carried out are as follows:

#### 1) Descriptive Statistics Test

After computing the outcomes of the students' scores, the table below shows the value of mean and standard deviation for both classes:

**Table 4.7 The Result of the Descriptive Statistics Test**

Descriptive Statistics					
	N	Minimum	Maximum	Mean	Std. Deviation
Pre-Test Experiment	27	20.0	80.0	38.889	11.8349
Post-Test Experiment	27	77.5	100.0	91.759	7.2991
Pre-Test Control	27	10.0	82.5	60.556	16.7896
Post-Test Control	27	45.0	100.0	78.704	19.9443
Valid N (listwise)	27				

According to the table above, it shown that the experimental class' pre-test mean score was 38.88 with standard deviation was 11.83, whereas the controlled class' pre-test mean score was 60.55 with standard deviation was 16.78. In the post-test, the experimental class' mean score was 91.75 with standard deviation was 7.29, whereas the controlled class' mean score was 78.70 with standard deviation was 19.94.

## 2) Hypothesis Test

The hypothesis testing of this research as follows:

- a) Null Hypothesis ( $H_0$ ) = There is no significant effect of using Internet-Based Teaching Media on students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.
- b) Alternative Hypothesis ( $H_1$ ) = There is a significant effect of using Internet-Based Teaching Media on students' Reading Comprehension of the eleventh grade at MAN 3 Makassar.

The hypothesis testing of this research followed the rules as follows:

- a) If the significant value is less than 0.05, the null hypothesis ( $H_0$ ) is rejected and alternative hypothesis ( $H_1$ ) is accepted.

b) If the significant value is more than 0.05, the alternative hypothesis ( $H_1$ ) is rejected and the null hypothesis ( $H_0$ ) is accepted.

To determine whether there was a significant difference in students' Reading Comprehension on narrative text taught using Internet-Based Teaching Media that is LINE Webtoon versus those taught using reading textbook, the calculating result should show whether the null hypothesis ( $H_0$ ) is rejected while the alternative hypothesis ( $H_1$ ) is accepted.

To test the hypothesis, an independent sample T-test was performed using IBM SPSS Statistics 26. The purpose was to know whether there is a significant effect on students' taught using Internet-Based Teaching Media that is LINE Webtoon. The result of the T-test can be seen on the table below:

**Table 4.8 The Result of Independent Sample T-test**

Independent Samples Test										
		Levene's Test for Equality of Variances		t-test for Equality of Means						
		F	Sig.	T	df	Sig. (2-tailed)	Mean Difference	Std. Error Difference	95% Confidence Interval of the Difference	
									Lower	Upper
Research Result	Equal variances assumed	54.155	.000	3.194	52	.002	13.0556	4.0872	4.8539	21.2572

Equal variances not assumed			3.1 94	32.8 42	.003	13.055 6	4.0872	4.73 85	21.37 26
--------------------------------------	--	--	-----------	------------	------	-------------	--------	------------	-------------

Based on the Independent Sample T-test output above, the Sig. (2-tailed) was 0.00. It means that the null hypothesis ( $H_0$ ) is rejected and the alternative hypothesis ( $H_1$ ) is accepted because the significance value was less than 0.05 ( $0.00 < 0.05$ ). Therefore, it can be concluded that there was a significance difference between experimental and controlled class, where there is an influence on class taught using Internet-Based Teaching Media that is LINE Webtoon in their reading comprehension.

## **B. Discussion**

### **1. The Planning of the Research**

Based on the findings, it was concluded that the lesson plan used in this study was developed from the school syllabus, as well as the one-sheet lesson plan. This one-sheet lesson plan is regulated in the circular letter of the Minister of Education and Culture No. 14 of 2019 regarding simplification of the lesson plan, where the policy directives grant teachers the freedom to select, design, implement, and refine a lesson plan format that includes three essential elements: learning objectives, learning activities, and learning assessment (Kemendikbud, 2019).

Teachers often spend a lot of time creating lesson plans, time that could be better spent organizing and assessing the actual learning process. Therefore,

since they are regarded as effective, efficient, and student-oriented, identifying these three essential elements is highly beneficial when creating lesson plans. In this case, the lesson plan is based on Putri (2023) with the following components based on regulation No. 14 of 2019: school identity, subject identity, class/semester, theme/sub-theme, time allocation, basic competencies, learning objectives, learning media, learning resources, learning steps, and assessment of learning outcomes.

The learning steps was based on the syllabus. Syllabus is a formalized planning process that consists of the learning objective, learning materials, learning activities, teaching strategies, and assessment (Yana, 2016). In this case, the researcher asked the teacher about the narrative text syllabus. Next, using the media to be researched which is LINE Webtoon. Before getting into the classroom, the researcher discussed the lesson plans with the teacher and prepared lesson plans for each of the six meetings in the class. Furthermore, the researcher prepared the questions for the pre-tests and post-tests. Align with Arikunto (2010) who stated test as a collection of questions, tasks, or other tools intended to assess a person's or a group's knowledge, intelligence, skills, or attitudes. The pre-test was administered by the researcher prior to the application of treatment in the teaching and learning process, and the post-test was administered following the given treatment. Pre-test and post-test results were compared to see how much the students had improved. The participants answered 40 questions from the researcher, all of which were predicated on the provided data.

## **2. The Implementation of the Research**

### **a. Pre-Test**

The researcher performed the pre-test to examine students' first reading abilities and challenges, particularly with narrative text material. In line with Bukhari (2019) that this test provides an understanding of students' various capacities, which helps teachers get to know their students and modify differentiated teaching methods in accordance with students' requirements. The researcher gave students 80 minutes to finish the test. On Wednesday, August 30, 2023, a pre-test for class XI IPS 2 was held. The researcher also cautioned students that if they had any question, they should ask the researcher rather than their friends.

Meanwhile, the pre-test for class XI IPS 1 was conducted on Thursday, August 31, 2023. As before, the researcher set a time limit of 80 minutes for students to complete the test. Unlike in the prior class, students did not appear to be taking the assigned test seriously. After administering the pre-test in both classes, the researcher examined the students' answer.

### **b. Treatment**

#### **1) Treatment on Experimental Class**

Thursday, September 7, 2023, marked the start of the first meeting. The researcher greeted the students, said a prayer, and verified their attendance before starting the learning process. The researcher then used the projector to display the barcode on the whiteboard so that students could more easily access the LINE Webtoon story "Cherry Blossoms".

To stimulate students' curiosity and establish the belief that stories on LINE Webtoon are enjoyable and customized to their tastes, the researcher selected this title for them to read and discuss during the first meeting. According to Rozimela (2014), the genre of the comic's story can boost students' motivation to read and get past their challenges. Students were instructed to read and understand the story by the researcher. The selection of the LINE Webtoon story "Cherry Blossoms" aligns with the uses and gratifications theory, as proposed by Rozimela (2014), which suggests that individuals actively select and consume media content based on their specific needs and desires. By choosing a story tailored to students' tastes, the researcher aimed to enhance their motivation to engage with the material, thereby promoting active learning and overcoming reading challenges through personalized content selection.

After that, the students were given worksheets by the researcher to gauge how well they understood the stories they had read. The researcher and students will talk about the worksheet once they have completed it. The researcher's job was to make sure the students comprehended the story they had read during this session. The researcher and the students came to some conclusions from their initial meeting after the discussion session. The researcher gave the students a reading assignment to read "Annie Green Hates Girls" at home before the meeting ended. The researcher requested that students read part of the narrative at home before moving on to the next meeting. By providing worksheets, the researcher aimed to scaffold students'

learning process and facilitate the consolidation of their understanding through active engagement with the text. As stated by Muspida et al (2023) regarding the constructivism approach, they say that students are actively involved in the entire process of developing their personal knowledge. This approach emphasizes that students do not just receive information passively, but are actively involved in building and designing their own understanding through intensive interaction with learning materials.

## 2) Treatment on Controlled Class

The first meeting began on Wednesday, September 6, 2023. The researcher greeted the students, said a prayer, took their attendance, and inquired about their progress before beginning the lesson. The researcher then instructed the students to open their textbooks to begin the learning process. They read the story "The Big Family in the Little House" during their first meeting. The researcher then instructed students to read and comprehend the tale "The Big Family in the Little House." The researcher gave the students worksheets to complete after they had finished reading. The researcher and the students talked about the worksheet's outcomes once every student had completed it. Subsequently, the investigator requested that the pupils unfold their textbook. They read the story "The Wolf and the Dog" during this meeting. By providing structured reading materials and engaging in discussions about the content, the researcher aimed to activate students' prior knowledge and facilitate the construction of new knowledge frameworks. As the cognitive theory outlined by Ningrum (2022), stating that

active interaction undertaken by learners with the learning material can enhance both motivation and comprehension in the learning process.

The researcher instructed the students to focus on the available illustrations related to the title before beginning to read the story. The researcher instructed students to read and comprehend the tale "The Wolf and the Dog" after they had gathered with their respective groups. Worksheets were given to each group by the researcher after the students had completed their reading. The researcher and the students had a discussion about the work's outcomes once each group had completed completing the worksheet. Representatives from each group were asked to present their work by the researcher. Following the discussion, the researcher and the students came to some conclusions about this meeting. Apart from that, the use of audio-visual media can also make it easier for students to process information because it can reduce the germane load on them so that students tend to be able to increase their mastery of concepts in learning (Latifah et al., 2016). By instructing students to focus on illustrations related to the story, the researcher aimed to provide additional contextual support and aid comprehension, thereby improving students' overall understanding of the text.

### **c. Post-Test**

The post-test was carried out by researcher to evaluate students' ability to read specifically narrative text material after being given treatment for 6 meetings. The researcher gave a time limit of 80 minutes for students to

work on the questions. Before students started working on the questions, the researcher had given clear instructions. The post-test in the control class was held on Wednesday, October 25, 2023. Meanwhile, the post-test in the experimental class was held on Thursday, October 26, 2023. By administering the post-test after six treatment sessions, the researcher aimed to measure the effectiveness of the given treatment in improving students' reading comprehension skills. However, based on statements from Prilliza et al. (2020) the success of post-test effectiveness is influenced by the students' own pretest scores. This is related to the student's desire or motivation to improve the results they obtain.

The atmosphere in the experimental class can be said to be more conducive than the control class. It was also different from when doing the pre-test, where students seemed not eager to read the questions given. When doing the post-test, the classroom was calm and students seemed to focus on reading the question sheet. Cahyaningtias and Ridwan (2022) stated that in the post-test session students experienced a significant increase compared to the pre-test. This is because after the pre-test session took place, students received a positive response to the application of learning media during the learning process. After the post-test was carried out in both classes, the researcher examined the students' work. It was found that the average post-test score of XI IPS 1 class as the experimental class was 91. The researcher concluded that this happened because of differences in student motivation when doing the pre-test and post-test.

### **3. The Evaluation of the Research**

The objective of this research was to figure out the effect of Internet-Based Teaching Media namely LINE Webtoon on increasing students' Reading Comprehension of the eleventh grade at MAN 3 Makassar. According to the research findings, the class that received treatment using Internet-Based Teaching Media namely LINE Webtoon achieved significant improvements in their reading comprehension.

The test results demonstrate the significant improvement; in the post-test, the mean score rose from 38.88 in the pre-test to 91.75. The independent sample T-test was used to test the hypothesis, and the findings are consistent with this. The significance value in this instance was 0.00, which is less than 0.05. As a result, the alternative hypothesis ( $H_1$ ) is accepted and shows that students who were taught utilizing LINE Webtoon as Internet-Based Teaching Media differed significantly from students who were taught using a reading textbook in their reading comprehension.

In this day and age, practically everyone owns a smartphone. Some schools do not forbid students from taking their smartphones to school. This might have a beneficial or bad impact on class activity depends on how that is used. On the other hand, most studies indicate that students's academic performance would suffer from excessive smartphone use (Sunday et al., 2021). This happens because one of the advantages of smartphones is as a means of entertainment. Students who are bored at school will turn to their smartphones for pleasure (Leung, 2019) such as playing games, viewing

videos on the internet, or scrolling social media. Therefore, teachers should establish regulations regarding the use of smartphones in the classroom. Rather than just being used as a means of entertainment, the use of smartphones at school can be used as a means of learning.

LINE Webtoon as one of the Internet-Based Teaching Media is an application that may be used as a media to learn English. It is also conveniently accessible via smartphone. It also provides various stories in the form of online comics, therefore it may be used as a reading learning media, particularly for narrative text material, because it contains the same aspects, such as presenting fiction stories. There are various genres presented such as drama, fantasy, comedy, action, slice of life, horror, etc. The range of genres given allows students to select stories that they enjoy, thereby increasing students' enthusiasm in reading.

When students' interest in reading has emerged, they will attempt to comprehend the plot of the story they read. As in this research, students were instructed to write down all the words that they did not comprehend. Then, they looked for the meaning of the words they had written. By increasing students' knowledge of difficult words that they previously did not understand, will make it easier for them to comprehend the stories they read (Irmawati et al., 2021).

Apart from being an Internet-Based Teaching Media, LINE Webtoon is also considered as visual media because it not only provide stories but also accompanied by interesting pictures. The use of pictures is one of the factors

that prevents students from becoming bored during the learning process (Norhaida, 2020). Even if there are words that students do not understand when reading stories on LINE Webtoon, the pictures presented help students understand the outline of the story (Khotimah et al., 2022). Aside from that, students can use the pictures on LINE Webtoon to guess or interpret words they do not understand.

Moreover, the result of this research is in line with the previous research finding. The digital comic webtoon, according to Pujiastuti (2019), was useful and effective in teaching students to read narrative text. The usage of webtoon made students enjoy reading. Students were motivated and faced new challenges in their reading learning. Ningsih (2021) also mentioned that webtoon comic is effective for teaching reading in senior high school because it allows students to easily read and comprehend language. Students could understand the material better and faster if they saw the pictures.

To conclude, the results of this research indicate that the use of Internet-Based Teaching Media namely LINE Webtoon to improve students' Reading Comprehension of eleventh grade students at MAN 3 Makassar was more effective than reading textbook. This is seen by the increase in scores from the experimental class, where the mean score of pre-test was 38.88 increased to 91.75. Apart from that, it can be demonstrated by examining the independent sample T-test result, which reveal that the alternative hypothesis ( $H_1$ ) was accepted because the sig. value was 0.00, which is below 0.05. So it can be

concluded that the use of Internet-Based Teaching Media namely LINE Webtoon is effective in increasing students' Reading Comprehension

## CHAPTER V

### CONCLUSION AND RECOMMENDATIONS

This chapter presented the research's conclusion as well as recommendations. Based on the findings of this research, suggestion and recommendations were made.

#### **A. Conclusion**

It comes to the conclusion based on the research results and discussion in the preceding chapter that eleventh grade students who were taught using Internet-Based Teaching Media that is LINE Webtoon had significantly different reading comprehension scores with those taught using reading textbook at MAN 3 Makassar in academic year 2023/2024. As a result, Internet-Based Teaching Media namely LINE Webtoon proved an effective media for increasing students' Reading Comprehension.

The effectiveness of it has been proven from the scores of pre- and post tests of the experimental class, where before receiving treatment with Internet-Based Teaching Media namely LINE Webtoon the pre-test mean score was 38.88 which is classified poor. Then, after given treatment the post-test mean score became very good with a score of 91.75.

Apart from that, the result of the independent sample T-test test also show that the alternative hypothesis ( $H_1$ ) was accepted because the significant value was 0.00 which is lower than 0.05 ( $0.00 < 0.05$ ). Thus, it can be concluded that using Internet-Based Teaching Media which is LINE Webtoon instead of

reading textbook increases students' Reading Comprehension in narrative text.

## **B. Recommendations**

According to the research findings, Internet-Based Teaching Media which is LINE Webtoon was successful in increasing students' Reading Comprehension. As a result, the researcher would like to give some recommendations to people who are closely related or interested in this field. For the teacher, to be successful in teaching English, teachers must create a positive classroom environment in which students feel comfortable and are not bored. Innovative instructional media can help with English teaching and learning. LINE Webtoon as Internet-Based Teaching Media, which was employed in this research, is one of the media that teachers can use. It has been demonstrated that using Internet-Based Teaching Media that is LINE Webtoon can assist students increase their reading comprehension.

For the students, students must have awareness to grow their interest in reading because the more they read, the more vocabulary they know. Students will easily comprehend English reading if they have extensive vocabulary knowledge. LINE Webtoon as Internet-Based Teaching Media can be one of the media that they can use to learn English. It can be accessed via smartphone anywhere and anytime.

For the future researcher, the researcher assessed students' Reading Comprehension utilizing LINE Webtoon as Internet-Based Teaching Media in this research. Since this research has limitations, it is advised that future

researchers look into related topics in greater detail. They should particularly use LINE Webtoon or other Internet-Based Teaching Media to investigate English language proficiency in areas like speaking and listening at various levels.

## CURRICULUM VITAE

Julia Wafiq Azizah was born in Bontang, East Kalimantan on July 1<sup>st</sup>, 2001. The author is the second daughter of Muhammad Husain and Ummul Hairi. She began her education at SDN 009 Bontang Selatan in 2007 – 2013. After that she continued her education at SMPN 2 Bontang in 2013 – 2016. Then, the author continued her education at SMAN 2 Bontang in 2016 – 2019. In the same year that she graduated, she was accepted as a student at Alauddin State Islamic University Makassar, Faculty of Tarbiyah and Teacher Training, English Education Department. When she was a student, she joined the United English Forum (UEF) community and became a member of the Department of Student Association (HMJ) organization. With full perseverance and motivation to always learn and try, the author has successfully written this thesis under the title *"The Effect of Internet-Based Teaching Media to Increase Students' Reading Comprehension of the Eleventh Grade at MAN 3 Makassar"*. Hopefully, the writing of this thesis is able to make a positive contribution to the world of education.
