ACKNOWLEDGMENT

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

The researcher wishes to convey her profound gratitude to Allah *Subhanahu wa Ta'ala*. His abundant blessings, health, and opportunity enabled her to complete this thesis entitled "The Diagnostic Assessment of English Subject implemented in *Merdeka* Curriculum of the Eighth Grade at SMP IT Al-Fatih School."

Prayers and greetings to the great Prophet *Muhammad sallallahu alaihi wasallam*, who brought Islam from the dark age to the light age as it is today. Compiling this thesis was not only the result of the researcher's efforts; it would not have been possible without the support, advice, and appreciation of those around her. Therefore, the researcher would like to express her deep gratitude to her beloved parents, especially her father, **Ahmad**, for teaching her the meaning of patience and simplicity. He worked tirelessly daily to enable him to send his children to school, never ceasing to offer his prayers and encouragement. She also thanks the researcher's mother, **Kartini**, who also never ceased to offer her prayers, support, affection, and enthusiasm for always prioritizing education, until the researcher was finally able to complete her thesis properly.

1. **Prof. Dr. H. Hamdan Juhanis, M.A., Ph.D.**, as the Rector of Universitas Negeri Alauddin Makassar, and all his vices.
2. **Dr. Andi Achruh, M.Pd.I.**, as the Dean at the Faculty of Education and Teacher Training, Universitas Negeri Alauddin Makassar, and all his vices.

3. **Prof. Dr. Muhammad Yaumi Muhammad, M. Hum., M.A.**, as the first supervisor, who patiently guided and advised the researcher, providing input and advice during the thesis preparation process.
4. **Multazam AbuBakar, S.S., M. Hum**, as the second supervisor, provided guidance, suggestions, and support, and patiently supported the researcher in preparing of this thesis.
5. **Prof. Dr. Hj. Mardiana M. Hum.**, as the first examiner, who provided very useful input to the researcher in perfecting this thesis.
6. **Nur Aliyah Nur, M.Pd.**, as Secretary of the English Language Education Department, and also as the researcher's second examiner, who provided useful suggestions and support in perfecting this thesis.
7. Thanks to the researcher's sister, **Nurmala Dewi, drg.**, as the researcher's donor, who has always been supportive and appreciative of the little things the researcher offers. Thanks also to the researcher's twin sister, **Nurhamida Azhar**, who worked with the researcher at the Faculty of Tarbiyah and Teacher Training, and who was a true witness from morning to morning during the writing process of this thesis. She supported the researcher without words but encouraged her with actions. **Moh, Naufal Kholis**, the researcher's younger brother, also supported the researcher and prayed for the smooth running of this thesis.
8. Thanks to the researcher's friends Az-Zurayyah, especially those in Makassar: **Andi Amfatwa R, Andi Umrah Agus, Widi Amalia, Sulistiawati, Nurul Izzah P, Sarina, Nurul Mutmainah, Rezky Nur Khalija, Nurhasanah Ahmad**, and also to those whose names have not been mentioned one by one, who were always there in joy and sorrow,

encouraging and supporting the researcher, and also serving as true witnesses to the writing process of this thesis.

9. Thank to the **NGC (New Generation Club)** for being the researcher's home. The researcher also extends her special thanks to the administrators, whose names cannot be mentioned individually, who colored the researcher's days as a student at UIN Alauddin Makassar, provided her with entertainment, and supported her in writing this thesis.
10. Thanks to the researchers' classmates, **Aviatic**, who have been there by her side, encouraging each other, helping the author when she felt in trouble both in class and outside class, since the researcher was still a new student until now.
11. Thanks the researcher's fellow writers, and especially **Muh. Safri**, who helped the researcher wholeheartedly, supported, accompanied her for guidance, and helped with the process the writing this thesis.
11. Thanks to the reseacher herself for surviving until now, for being patient in the face of many trials that have come her way, thank you to the researcher for the simplicity that is embedded in her heart, for being able to lower her prestige a little, walk on her own two feet, learn to step aside from left to right from right to left until finally she can walk independently every day to continue attending lectures since she was in the early semester until the end.

ABSTRACT

Thesis Title	: "The Diagnostic Assessment of English Subject implemented in Merdeka Curriculum of the Eighth Grade at SMP IT Al-Fatih School."
Year	: 2025
Researcher	: Nurhumaida Azhar
Consultant I	: Prof. Dr. Muhammad Yaumi, M. Hum.
Consultant II	: Multazam Abubakar S.S., M.Hum.

The objectives of this research are to (1) analyze the implementation of diagnostic assessment; (2) identify the challenges faced by the teacher in its implementation; and (3) explore its impact on the learning process. Data were collected through interviews to gather in-depth information related to the research topic.

This research employs a descriptive qualitative method to examine the implementation of diagnostic assessment in the English Language subject within the *Merdeka* Curriculum in grade VIII of SMP IT Al-Fatih.

This research found that the English teacher in Class VIII of SMP IT Al-Fatih fully implemented diagnostic assessments within the *Merdeka* Curriculum, covering both cognitive and non-cognitive aspects. The teacher utilized the 262 method and Bloom's Taxonomy indicators to create questions and collaborated with a psychological institution for non-cognitive assessments. The assessment results were used to determine differentiated learning strategies based on students' comprehension levels. Despite challenges like limited time and varied student backgrounds, this assessment proved effective in helping teachers design adaptive learning, enhance student understanding, and foster English communication skills through various interactive programs and media.

The implications suggest that the implementation of effective diagnostic assessments can be a crucial foundation for designing adaptive and student-centered learning strategies, as emphasized in the *Merdeka* Curriculum. By thoroughly understanding students' initial needs and abilities, the teacher can develop more targeted learning activities, improve the quality of the learning process and outcomes, and encourage active student participation. Therefore, strengthening the teachers' capacity in designing and following up on diagnostic assessments is vital to support the successful implementation of the *Merdeka* Curriculum across various educational institutions.

CHAPTER I

INTRODUCTION

A. Background

Assessment is defined as a process for gathering data regarding the degree of student learning achievements. The assessment process encompasses the collection of student work, the evaluation of their attitudes, and the measurement of their learning outcomes through both verbal and written methods. This evaluation is intended to encourage students and provide a societal certification of their achieved competencies. Therefore, assessment is a necessary component for effectively evaluating and improving learning.

Assessment is a way to determine whether the responses given by students are correct or still need improvement, which can determine the achievement of learning objectives as measured through questions. If there is a set of tasks or questions given to students, but there are no right or wrong answers, then it is not a test. From the description above, it can be concluded that tests are a measuring tool for obtaining information on student learning outcomes that require right or wrong answers. According to Adi Suryanto, a test is a structured tool or process employed to quantify a subset of an individual's behavior.¹

In the *Merdeka* curriculum, diagnostic assessments are employed by teachers as a method to gather data on student abilities and performance,

¹ Adi Suryanto, "Konsep Dasar Penilaian Dalam Pembelajaran," *Evaluasi Pembelajaran Di SD* 5, no. 1 (2012): 63.

which are derived from their learning outcomes, with the aim of identifying individual student learning needs.²

Teachers can use various methods to evaluate assessments, such as tests, observations, or interviews, to collect information about students' learning abilities and performance. By analyzing the results of diagnostic assessments, teachers can gain insights into students' strengths and weaknesses, which informs the creation of targeted learning strategies designed to meet their specific needs.³

By knowing students' initial ability levels, teachers can determine the right material and adjust the learning approach to suit students' needs. In this case, diagnostic assessment also plays an important role in ensuring that the material studied is effective and appropriate to students' abilities.⁴

The diagnostic assessment framework in the *Merdeka* curriculum extends beyond traditional academic evaluation to include the assessment of students' attitudes, values, and social competencies.

The Cognitive diagnostic assessment refers to a set of diagnostic procedures that are cognitively based to determine students' strengths and weaknesses in understanding lessons with the structure of knowledge and skills during the learning process.⁵ This is different from non-cognitive

assessments which aim to determine students' readiness both emotionally and psychologically to accept the learning that will be delivered.⁶

The 2013 Curriculum emphasizes the development of student competencies in three aspects, namely knowledge, skills, and attitudes. Diagnostic assessments tend to be more focused on measuring the achievement of these competencies. Assessments are also carried out continuously and integrated with the learning process. Whereas, the Assessment Report in the 2013 Curriculum is more detailed, covering cognitive, affective, and psychomotor aspects. This requires teachers to provide comprehensive feedback to students and parents.

The *Merdeka* Curriculum enables teachers to be more adaptable in their teaching and assessment strategies to accommodate student needs. that way, teachers can find out more about more personal and contextual diagnostic assessments. Diagnostic assessments in the *Merdeka* Curriculum often utilize digital technology to collect and analyze student data. The *Merdeka* Curriculum emphasizes learning differentiation, Diagnostic assessments serve to identify the diverse learning needs of students, enabling teachers to modify their instructional methods to ensure an optimal learning experience for each individual.⁷

The *Merdeka* Curriculum represents the most recent learning program within the Indonesian education system, intentionally structured to afford schools and teachers the flexibility to develop learning processes that are responsive to student needs. A significant component of its implementation is

⁶ Supriyadi et al., "Penyusunan Instrumen Asesmen Diagnostik Untuk Persiapan Kurikulum Merdeka."

⁷ Marnis Susanti, Thre Rahmadona, and Yanti Fitria, "Studi Literatur: Perbedaan Penilaian Kurikulum 2013 Dengan Kurikulum Merdeka," *Jurnal Basicedu* 7, no. 1 (2023): 339–50, <https://doi.org/10.31004/basicedu.v7i1.4444>.

diagnostic assessment, which is employed to ascertain students' learning needs at the outset or prior to the commencement of instruction.⁸

The diagnostic assessment is also the key to designing learning by the achievement of more personalized and effective learning goals, especially in English subjects. The *Merdeka* curriculum was a breakthrough in education to be able to encourage all students to participate actively in their learning, how they want to learn.

In the *Merdeka* Curriculum, diagnostic assessment is used as an instrument to identify individual student learning needs. As the results of the interview with the researcher and teacher stated, Al-Fatih School is a *school mover* in Makassar, This school has also implemented the *Merdeka* Curriculum and the diagnostic assessment starting in 2022. Thus, the phenomenon of researcher chose Al-Fatih School because the implementation of the *Merdeka* Curriculum is fairly good and consistent, thus providing effectiveness and challenges in implementing the curriculum. Al-Fatih is also a school that has good facilities, competent teachers, and students who have different socio-economic backgrounds or academic abilities. A central objective of the *Merdeka* Curriculum is the development of graduates capable of competing on a global scale. Within this framework, diagnostic assessments serve to assist teachers in determining and understanding students' initial levels of ability.⁹

This study has special strategies and techniques used by English teachers at Al-Fatih School to carry out diagnostic assessments. This study

⁸ Gusti Ayu Putu Trisna Wulandari Wulandari, Ida Bagus Putrayasa, and I Nengah Martha, "Efektivitas Asesmen Diagnostik Dalam Pembelajaran Berdiferensiasi Pada Pelajaran Bahasa Indonesia," *Nusantara: Jurnal Pendidikan Indonesia* 3, no. 3 (2023): 433–48, <https://doi.org/10.14421/njpi.2023.v3i3-5>.

⁹ Haerazi et al., "Pelaksanaan Asesmen Diagnostik Mata Pelajaran Bahasa Inggris Tingkat SMP Negeri Dan SMA Negeri: Penguatan Implementasi Kurikulum Merdeka Di Kab. Lombok Tengah."

focuses on Eighth grade because it is the second year of junior high school education. It is a critical period where students experience an important transition from basic education. In Eighth grade, students experience significant cognitive and emotional development because they are around 13-14 years old. Thus, research in Eighth grade can provide information about students' academic readiness when they will enter ninth grade and face important exams that determine their graduation and continuation of their studies. This chapter examines the types of assessment tools used, the frequency of assessments, and what methods are used to analyze and interpret assessment results. This study can further explore how findings from diagnostic assessments are used by teachers to inform teaching practices and meet individual student needs.

Thus, the implementation of a *Merdeka* Curriculum related to diagnostic assessment at Al-Fatih School aims to provide insights that can influence the effectiveness of this approach in the context of the *Merdeka* Curriculum. These findings will contribute to a better understanding of how diagnostic assessments can improve English language learning and support student achievement based on the new curriculum.

B. Research Focus and Its Description

1. Research Focus

Situated within the context of the *Merdeka* Curriculum, this research centers on the implementation of diagnostic assessments in English language learning at Al-Fatih School. The core inquiry of this study is how teachers utilize diagnostic assessments to ascertain student learning needs and modify their pedagogical approaches accordingly. The aim of this research is to further

explore the nuances of this implementation at the specified educational institution.

In this research, the focus around related to 3 objectives. **Firstly**, to analyze how diagnostic assessment can be implemented properly by the objectives and achievements of the *Merdeka* curriculum, especially in English language learning. It can be explained that knowing the diagnostic assessment can help teachers with what strategies are needed in learning when conducting assessments, especially diagnostic assessments. **Second**, the study aims to identify the difficulties experienced by teachers during the implementation of diagnostic assessments in the learning process, including both cognitive and non-cognitive assessments. This research will provide solutions to the challenges faced by teachers, enabling them to carry out more effective assessments than before. **Third**, the third objective is regarding the impact of diagnostic assessments in the learning and teaching process, especially in English language learning, where the research aims to find out what impacts will be faced by diagnostic assessments have when the learning process takes place. That way, knowing these impacts, teachers can minimize the impacts that will hinder the assessment process when learning takes place.

2. The Summary of Research Focus and its Description

Table 1.1. Research Focus and Its Description

No	Research Focus	Focus Description
1.	The Diagnostic Assessment Of English Subject Implemented In <i>Merdeka</i> Curriculum at Al-Fatih School	1. The diagnostic assessment of English subjects implemented in the <i>Merdeka</i> Curriculum: The researcher has examined how diagnostic assessment is implemented in the context of the

		<p><i>Merdeka</i> Curriculum at Al-Fatih School. This involves an interview and documentation of practices carried out by the teacher in identifying students' strengths and weaknesses, especially in English. The researcher has collected data through the classroom, interviews with the teacher and students, and analysis of related documents such as lesson implementation plans (RPP) and assessment result reports.</p>
		<p>2. The challenges faced by teachers: The researcher has explored various obstacles and difficulties experienced by the teacher when conducting diagnostic assessments. This includes technical issues, such as the availability of tools and resources, as well as methodological and practical challenges faced by teachers, such as time constraints, thereby knowing the teacher's ability to design and implement assessments, as well as students' responses to assessments. Data has</p>

		<p>been collected through semi-structured interviews with the teacher during the learning process.</p>
		<p>3. The impacts of diagnostic assessments: The researcher has examined how the results of the diagnostic assessment affect the teaching and learning process in the classroom. In this case, it includes changes in teaching strategies by the teacher, increasing understanding of students, and adjusting the <i>Merdeka</i> Curriculum based on student needs identified through the assessment. The researcher has used classroom interviews with the teacher and students, and analysis of student learning outcomes to get a comprehensive picture.</p>

C. Research Questions

Drawing upon the preceding analysis, the researcher articulated the research question that this study seeks to address:

1. How is the diagnostic assessment of English subjects implemented in the *Merdeka* Curriculum of eighth grade at SMP IT Al-Fatih school?

2. What are the challenges faced by teachers in doing diagnostic assessments of English subjects implemented in the *Merdeka* Curriculum of eighth grade at SMP IT Al-Fatih school?
3. What are the impacts of diagnostic assessment on the teaching and learning process of English subjects implemented in the *Merdeka* Curriculum of eighth grade at SMP IT Al-Fatih school?

D. Previous Related Research Findings

The researcher has appended the following findings pertaining to this research:

Suarni conducted the research at Madrasah Aliyah Negeri Kota Sorong with the title "*The Implementation of Diagnostic Assessment of Merdeka Curriculum in English Language Subject*". The researcher aims to obtain relevant and valid data in diagnostic assessments related to the *Merdeka* Curriculum in English language subjects. The type of research used is qualitative research. Data collection was carried out using classroom observations, observations during the learning process in class with a focus on the use of diagnostic assessments by teachers and student responses as well as conducting interviews with English teachers to obtain their views on the implementation of diagnostic assessments and obstacles, encountered, and positive experiences. Challenges in implementing diagnostic assessments, such as limited resources and subjective assessment, still need to be handled proactively. The findings of this research lead to the recommendation that educational institutions should persist in encouraging and supporting the integration of diagnostic assessments within the *Merdeka* Curriculum. This study offers a more nuanced understanding of effective implementation

strategies for English language subjects (Phase F) at Madrasah Aliyah Negeri Sorong City and may serve as a valuable guide for other Madrasahs or schools intending to adopt comparable methodologies to elevate the quality of education and learning.¹⁰

Yanche Aringka conducted the research entitled "*Diagnostic Assessment In Implementing Curriculum Merdeka On Senior High School*" This research, employing a descriptive methodology within a qualitative paradigm, was conducted to ascertain the implementation of diagnostic assessment within the Merdeka Curriculum at SMAN 1 Sitiung. The findings of this study underscore the pedagogical approaches utilized by educators in the execution of diagnostic assessment, which are congruent with established educational theories and contribute to the development of dynamic and supportive learning environments conducive to student growth and development. The research concludes that the implementation of diagnostic assessments plays a salient role in augmenting the effectiveness of the teaching and learning process within the *Merdeka* Curriculum framework in secondary educational institutions. Through the phases of preparation, implementation, and follow-up, educators are enabled to identify students' needs and potential with greater depth, facilitate enhanced interaction between teachers and students, and provide substantive guidance for their ongoing development.¹¹

Wulanndari conducted the research entitled "*Effectiveness of Diagnostic Assessment in Differentiated Learning in Indonesian Language Lesson*" In this

¹⁰ Suarni, "Implementasi Asesmen Diagnostik Dalam Kurikulum Merdeka Pada Mata Pelajaran Bahasa Inggris Kelas Xi/Fase F Di Madrasah Aliyah Negeri Kota Sorong," *Jurnal Keguruan Dan Ilmu Pendidikan (JKIP)* 1, no. 4 (2023): 263–70, <https://doi.org/10.61116/jkip.v1i4.188>.

¹¹ Yanche Aringka, "Diagnostic Assessment In Implementing Curriculum Merdeka On Senior High School," *JUPE: Jurnal Pendidikan Mandala* 8, no. 3 (2023): 913, <https://doi.org/10.58258/jupe.v8i3.5917>.

study, the researcher describes the division of Diagnostic assessments into two, namely non-cognitive diagnostic assessments and cognitive diagnostic assessments. This study is a qualitative descriptive research, namely a research method that describes the reality according to the data obtained to describe the effectiveness of diagnostic assessments in differentiated learning. In carrying out diagnostic assessments, teachers are required to develop effective assessment instruments. Teachers develop effective assessment instruments, such as tests, quizzes, or checklists. These instruments must meet necessary psychometric standards, such as validity and reliability, to provide accurate and consistent results. It can be concluded that the use of diagnostic assessment as part of knowing students' readiness, interests, Diagnostic assessments facilitate a deeper understanding of students' learning support requirements and inherent abilities, thereby enabling teachers to more readily select appropriate pedagogical approaches and conduct evaluations in a manner that is particularly relevant to Indonesian language learning. Furthermore, the application of diagnostic assessments has the potential to augment students' engagement and interest in the study of Indonesian.¹²

Based on the three researchs above, it can be concluded that the *Merdeka* Curriculum has an important role in increasing the effectiveness of the teaching and learning process, both in English and Indonesian subjects in the use of diagnostic assessments. The results of the two studies by Suarni¹³ and Aringka¹⁴, Through qualitative data from classroom observations and

¹² Wulandari, Putrayasa, and Martha, "Efektivitas Asesmen Diagnostik Dalam Pembelajaran Berdiferensiasi Pada Pelajaran Bahasa Indonesia."

¹³ Suarni, "Implementasi Asesmen Diagnostik Dalam Kurikulum Merdeka Pada Mata Pelajaran Bahasa Inggris Kelas Xi/Fase F Di Madrasah Aliyah Negeri Kota Sorong."

¹⁴ Aringka, "Diagnostic Assessment In Implementing Curriculum Merdeka On Senior High School."

teacher interviews, this study provides an in-depth and comprehensive understanding of how diagnostic assessments are implemented within the Merdeka Curriculum. Constraints such as limited resources and subjective assessments need to be addressed proactively. Wulandari discusses the importance of diagnostic assessment in differentiated learning, especially in Indonesian language subjects. The results of the research confirm that the use of diagnostic assessments can help teachers understand students' readiness, interests, and abilities, and make it easier to choose appropriate learning approaches. It can also increase students' interest in learning Indonesian.¹⁵

The three researchers above, there are **similarities** and **differences** related to this research with the title "The Diagnostic Assessment of English Subject Implemented In *Merdeka* Curriculum of The Eighth Grade at SMP IT Al-Fatih School" The similarities of the three studies above with this study are that they both focus on diagnostic assessment which focuses on the implementation and effectiveness of diagnostic assessment. The similarities between the three studies above are that they both use qualitative methods in research, especially observation, and interviews with teachers, the studies above are also carried out within the *Merdeka* curriculum framework to increase effectiveness in the teaching and learning process. The similarities of this study with the first study, namely "The implementation of diagnostic assessment of *Merdeka* Curriculum in English Language Subject," both focus on the implementation of diagnostic assessment that focuses on English subjects.

The difference between this research and the three researchers above is the place where the research was conducted; the first researcher conducted

¹⁵ Wulandari, Putrayasa, and Martha, "Efektivitas Asesmen Diagnostik Dalam Pembelajaran Berdiferensiasi Pada Pelajaran Bahasa Indonesia."

research at MAN Sorong City, the second researcher conducted research at SMA Negeri 1 Sitiung, and the third researcher focused on differentiation in Indonesian language learning. The difference between the three researchers above and this research is that the primary focus of the first study aligns with that of the current study but includes challenges and positive experiences in implementation, while the second study focuses on the pedagogical approach used by teachers, then the third study is to conduct research that focuses on the effectiveness of diagnostic assessments in differentiation learning, especially in Indonesian language subjects. Thus, this study specifically aims to obtain relevant and valid data in diagnostic assessments related to the *Merdeka* Curriculum in English language learning.

In totality, these three studies underscore the substantial role of diagnostic assessments in the enhancement of learning quality in both English and Indonesian within the framework of the *Merdeka* Curriculum. Through a more profound understanding of student needs, educators are better equipped to identify potential, facilitate improved interactions between teachers and students, and offer valuable guidance for their ongoing development.

E. Research Objective and Research Significances

1. Research objective

Based on the research question above, the aims of this research are as follows:

- a. To analyze the diagnostic assessment of English subjects implemented in the *Merdeka* Curriculum of eighth grade at SMP IT Al-Fatih school.
- b. To identify the challenges faced by teachers of diagnostic assessment of English subjects implemented in the *Merdeka* Curriculum of eight grade at SMP IT Al-Fatih school.

- c. To explore the impacts of diagnostic assessments diagnostic assessment of English subjects implemented in the *Merdeka* Curriculum of eight grade at SMP IT Al-Fatih school

2. Research Significance

a. Theoretical Significances

The researcher has been analyzed the implementation of diagnostic assessments in the context of English language Subjects at Al Fatih School. This research contributes novel insights or offers validation for established theories within the field of English education. Furthermore, the findings of this study may serve as a basis for the development of new theoretical frameworks or the modification of existing ones, particularly in relation to the application of diagnostic assessments to enhance interest in second language acquisition, specifically English, as implemented at Al-Fatih School

b. Practical Significances

The practical significances of this research are addressed to students and teachers.

1) Students

This research can help students by providing clearer and more precise information about their strengths and weaknesses in English. In this way, they can receive more structured guidance and learning materials can be adjusted according to student needs. Students can also learn about the importance of monitoring and reflecting on their learning progress. This can encourage students to be more proactive in managing their learning and identifying where they need to improve.

2) The teacher

The teacher can use the results of research related to this diagnostic assessment to adapt teaching methods and learning materials to suit student needs. therefore, research can improve teaching effectiveness and strengthen interactions between teachers and students. This research provides further understanding of the challenges faced in implementing diagnostic assessments, teachers can develop their professional skills, including the ability to design and implement assessments that are relevant and beneficial to both students and teachers.

3) Another Researcher

This research can increase understanding and provide deeper insights for other researchers interested in curriculum development or assessment in various educational contexts. The results of this research can be the basis for further research in the field of English language education or diagnostic assessment, opening the door to more in-depth and diverse studied.

CHAPTER II

REVIEW OF LITERATURE

A. The Assessment

1. Definition of Assessment

Assessment is needed in every learning in various curricula to measure learning success. Learning assessment is needed as a basis for evaluating the development of educational units effective assessment serves as a motivator for student learning and facilitates the attainment of maximum learning outcomes by enabling students to leverage their full potential. The quality of sound learning is manifest in the quality of its assessment practices, and reciprocally, the quality of assessment provides insight into the quality of the associated learning.¹⁶

One term that is often used to accommodate assessment and evaluation activities is assessment. The use of the term assessment is to accommodate both activities, which is not too wrong because the concept of assessment and evaluation contains elements of concluding. According to David et. al., "Assessment is the process of collecting, interpreting, and synthesizing information to aid in decision making. Assessment is synonymous with measurement plus observation. It concerns drawing inferences from these data sources. The primary purpose of assessment is to increase student learning and development rather than simply to grade or rank student performance."

Assessment constitutes an activity focused on the collection of information pertaining to student learning outcomes, derived from diverse forms of

¹⁶ David Darwin, Endry Boeriswati, and Fathiaty Murtadho, "Asesmen Pembelajaran Bahasa Dalam Kurikulum Merdeka Belajar Pada Siswa Sma," *Lingua Rima: Jurnal Pendidikan Bahasa Dan Sastra Indonesia* 12, no. 2 (2023): 25, <https://doi.org/10.31000/lgrm.v12i2.8639>.

evaluation, and the subsequent processing of this information to ascertain student learning achievement and developmental progress. Various types of bills used in assessment include quizzes, daily tests, individual assignments, group assignments, end-of-semester tests, work reports, and so on. For example, the teacher gives students an assignment to compose a work that must be submitted on a specified date. After the students submit the composition, the teacher checks it and gives feedback to the students to revise. The results of the examination are returned to the students to be revised. The students then correct their compositions according to the teacher's input. After revising their compositions, the students submit their compositions back to the teacher to be assessed. From activities like these, teachers can assess the results and development of student learning.¹⁷

2. Types of Assessment in *Merdeka* Curriculum

In general, assessments in the *Merdeka* Curriculum consist of three types, namely diagnostic assessments, formative assessments, and summative assessments.

a) Diagnostic Assessment

Diagnostic assessments are designed to pinpoint what students know and can do, as well as where they need support. Educators use this information to tailor their teaching methods to meet individual student learning requirements. Factors like family background, learning preparedness, motivation, and interests can also be valuable insights for teachers when creating personalized learning plans.¹⁸ Diagnostic assessments are also

¹⁷ Drs Adi Suryanto, "Modul Konsep Dasar Penilaian Dalam Pembelajaran," 2020, 1–42.

¹⁸ Kemendikbudristek, "Tahapan Implementasi Kurikulum Merdeka Di Satuan Pendidikan,," *Kemendikbudristek*, 2022, 1–16, <https://kurikulum.kemdikbud.go.id/wp-content/uploads/2022/07/Tahapan-Implementasi-Kurikulum-Merdeka.pdf>.

divided into two types, namely cognitive diagnostic assessments and non-cognitive diagnostic assessments. In the *Merdeka* Curriculum, a key assessment method is Diagnostic Assessment. This type of assessment is specifically conducted to understand each student's skills, strong points, and areas where they need improvement. The goal is to use this information to create learning experiences that are tailored to their individual abilities and current understanding. Diagnostic assessment is already being used to help educators identify these strengths and weaknesses in students' learning.¹⁹

b) Formative Assessment

Formative assessment is used to track and enhance learning as it happens and to check if learning goals are being met. Through this ongoing assessment, educators can understand students' learning needs, identify any hurdles or difficulties they or the students are facing, and gather information about student progress. This information serves as valuable feedback for both students and teachers. Formative assessment is an integral part of a complete assessment approach, conducted by teachers during regular lessons to gauge the effectiveness of their teaching and the students' learning. Formative assessment can be used by teachers as feedback that aims to evaluate the learning process to be better in the future. According to Darwin et al., (2023), Formative assessment can be carried out in writing or orally, either formally or informally, using test or non-test instruments. One of the formative assessments that uses tests is a quiz.²⁰

¹⁹ Fitri Sagita Mawaddah and Fakultas Keguruan dan, "Assesmen Dalam Kurikulum Merdeka Belajar," *Jurnal Literasi Dan Pembelajaran Indonesia* 3, no. 1 (2023): 8–13.

²⁰ Darwin, Boeriswati, and Murtadho, "Asesmen Pembelajaran Bahasa Dalam Kurikulum Merdeka Belajar Pada Siswa Sma."

c) Summative Assessment

Summative assessment in elementary and secondary education focuses on evaluating how well students have met learning objectives and outcomes. The results of this assessment are used to make decisions about grade promotion and graduation. Student performance is judged against predetermined achievement standards. In the context of language learning within the *Merdeka* Curriculum for High School students, summative assessment aligns with the stated Learning Objectives. However, the purpose of summative assessment differs in early childhood education. There, it's used to understand a child's developmental progress and is not a factor in promotion or graduation. As highlighted by Darwin et al. (2023), summative assessment typically takes the form of a learning outcome report, which details academic achievements and may also include information about a child's growth and development.²¹

3. Theory of Assessment

Assessment is a data-gathering process used to determine the degree, manner, and specific areas in which educational goals have been reached. It also identifies what hasn't been achieved and the reasons why. Expanding on this, Cronbach and Stufflebeam define assessment not only as measuring the achievement of objectives but also as a process that informs decision-making. According to Anas Sudijono in "Introduction to Educational Evaluation," assessment involves evaluating something, which means making judgments based on established criteria, such as good or bad, healthy or sick, smart or not smart, and so forth. Furthermore, emphasizes that the term assessment has a broader meaning than the term measurement because measurement is only a

²¹ Darwin, Boeriswati, and Murtadho.

step or action that needs to be taken in the context of implementing an evaluation.²²

According to Yunita et al., (2023), assessment and measurement of learning outcomes based on psychological analysis is one of the processes to evaluate students' ability to understand the material that has been taught by educators. This process is carried out using assessment instruments that have been designed systematically and in such a way. Assessment and measurement are designed to find out how far students understand the material that has been taught. Assessment and measurement of learning outcomes in students are very important to assess the achievement of graduate competencies and determine the success of learning for students. Measurement and assessment of learning also assist teachers in determining the right learning methods and providing feedback to students about their learning progress.²³

B. The Diagnostic Assessment

1. Definition of Diagnostic Assessment

The Diagnostic assessment in learning is an approach that aims to identify students' strengths, weaknesses, needs, and understanding at the beginning or during the learning process. Diagnostic assessment aims to identify specific areas where students are struggling with particular topics or learning content. Having a diagnostic assessment can help teachers find out what causes these weaknesses. After carrying out a diagnostic assessment, the

²² Ahmad Kholiq, "Pengaruh Nilai Tugas Terhadap Kedisiplinan Belajar Akidah Akhlak Siswa Kelas V MI Terpadu Nurul Islam Semarang Tahun Ajaran 2013-2014," *Walisongo Repository* 3, no. 4083 (2014): 9–37, <https://eprints.walisongo.ac.id/id/eprint/4083>.

²³ Yunita Eka Nur Prastiwi et al., "Penilaian Dan Pengukuran Hasil Belajar Pada Peserta Didik Berbasis Analisis Psikologi," *Bersatu: Jurnal Pendidikan Bhineka Tunggal Ika* 1, no. 4 (2023): 218–31, <https://journal.politeknik-pratama.ac.id/index.php/bersatu/article/view/293>.

teacher can use the diagnostic results as a tool or basis for providing follow-up, which is special treatment, or by the student's weaknesses.

Diagnostic assessments are typically used at the beginning of a learning period to understand students' foundational skills and prior knowledge. The goal is to quickly get an overview of the abilities of all students in a class and to gauge their current level of understanding. This information enables teachers to tailor learning materials to match the students' diverse needs. There are two main types of diagnostic assessments: cognitive and non-cognitive.²⁴

As stated in QS Al-Baqarah: 286

لَا يُكَلِّفُ اللَّهُ نَفْسًا إِلَّا وُسْعَهَا لَهَا مَا كَسَبَتْ وَعَلَيْهَا مَا اكْتَسَبَتْ

"Allah does not burden a person but according to his ability."

This indicates which means that each individual has the same abilities and capacities in facing challenges and learning. The Qur'an teaches that every individual is given different potential and abilities by Allah. where the intended meaning is that in the view of the Qur'an, every individual is gifted by Allah with unique abilities and potential. Therefore, there are no two individuals created by Allah who have the ability and potential which is identical. Thus, the Qur'an teaches that every individual has abilities and potential are different, so from these differences, humans should respect and respect each other. This is also diversity, a gift from God that creates a life rich and full of opportunities for every individual to develop according to their potential.²⁵

²⁴ Wa Ode Arini Maut, "Asesmen Diagnostik Dalam Implementasi Kurikulum Merdeka (IKM) Di SD Negeri 1 Tongkuno Kecamatan Tongkuno Kabupaten Muna Sulawesi Tenggara," *Dikmas: Jurnal Pendidikan Masyarakat Dan Pengabdian* 02, no. 4 (2022): 2022, <https://ejurnal.pps.ung.ac.id/index.php/dikmas/article/view/1878>.

²⁵ Tanuri Abu Fatih, Husnul Khotimah, and Mujiono Mujiono, "Diagnosis Kesulitan Belajar Dalam Perspektif Al-Qur'an," *Journal on Education* 6, no. 2 (2024): 10885–98, <https://doi.org/10.31004/joe.v6i2.4645>.

The Diagnostic assessment can be divided into two parts, namely, non-cognitive assessment and cognitive assessment. These two types of diagnostic assessments have their respective purposes. non-cognitive diagnostic assessments are carried out to explore knowledge about psychological well-being and social-emotional towards students, as well as knowledge about activities that take place at home during the study, knowledge about students' family conditions, knowledge about social situations, background, as well as knowledge of students' learning styles and interests. Meanwhile, cognitive diagnostic assessments aim to adjust the level of learning according to students' abilities.²⁶

2. Types of Diagnostic Assessment

The Diagnostic assessments are divided into two types cognitive and non-cognitive diagnostic assessments, each of which has a learning objective. there are;

a) Cognitive Assessment

The Cognitive assessment is an evaluation method that can be used to measure a student's intellectual abilities or academic understanding. Cognitive assessment focuses on aspects related to knowledge and mental skills, such as critical thinking, problem-solving, and understanding concepts.

The Cognitive assessment covers various aspects such as knowledge, where students are tested to what extent they know the facts, concepts, and information being taught, usually through multiple choice or short-form tests. Comprehension is another aspect, which measures a student's ability to

²⁶ Wiji Antika, Budi Sasomo, and Arum Dwi Rahmawati, "Analisis Asesmen Diagnostik Pada Model Pembelajaran Project Based Learning Di Kurikulum Merdeka SMPN 3 Sine," *Pedagogy* 8, no. 1 (2023): 253.

understand and interpret information, which can be tested through open-ended questions or by explaining concepts in their own words.

The application aspect of cognitive assessment measures Students' capacity to utilize their existing knowledge in novel situations or different situations, such as through case study questions or project assignments. Analysis in cognitive assessment aims to measure students' ability to break down information into parts in understanding the structure and relationships between these parts, by comparing and contrasting two concepts or analyzing data. Cognitive assessment evaluation is to help teachers measure students' ability to make judgments based on certain criteria, such as assessing the validity of arguments or evaluating the quality of work

The Cognitive assessment can be conducted through a variety of methods, including written tests, quizzes, project assignments, and presentations. The results of the cognitive assessment are also used to determine the extent to which students have mastered the material taught and to design learning interventions needed to improve students' understanding and skills.²⁷

b) Non-Cognitive Assessment

Non-cognitive assessment is an evaluation process that can assess aspects of students' attitudes, values, and non-academic characteristics. Non-cognitive assessment focuses on the emotional, social, and psychological dimensions of student learning, which are not directly related to intellectual knowledge and skills. The aspects assessed in the non-cognitive assessment are; *Firstly*, students' motivation, interest, and involvement in the learning process. *Secondly*, students' ability to interact well with other people, work in

²⁷ Antika, Sasomo, and Rahmawati.

groups and communicate effectively. *Third*, students' ability to organize themselves, take initiative, and solve problems independently. *Fourth*, students' ability to recognize, manage, and express emotions well and productively. *Fifth*, students' ability to influence others, take responsibility, and be able to lead in certain situations. Students' understanding of values such as integrity, honesty, empathy, and social responsibility. *Sixth*, the student's ability to overcome failures or challenges and bounce back with high motivation.

Non-cognitive assessment is also often carried out through teacher observation, interviews with students or parents, or student self-assessment. Thus, information from this assessment can help teachers and schools to better understand student development and readiness in non-academic aspects, so they can design learning approaches that support students' overall holistic development.

Unlike cognitive diagnostic assessments that focus on academic abilities, non-cognitive diagnostic assessments are conducted at the start of learning to understand students' psychological and social-emotional state, their home learning environment, family and social circumstances, as well as their individual learning styles, personalities, and interests. These assessments typically use non-test methods, such as surveys, direct questioning, and other qualitative approaches.²⁸

3. Procedure of Diagnostic Assessment

The Diagnostic assessment requires steps or stages that will make it easier for teachers to determine students' deficiencies or abilities in the

²⁸ Kadek Dedy Herawan, "Pelaksanaan Aasesmen Diagnostik Non-Kognitif Dalam Rangka Mememetakan Kebutuhan Belajar Peserta Didik Dalam Pembelajaran Bahasa Bali Kelas X Tsm Smk Pgri 6 Denpasar Tahun Ajaran 2023/2024," *Kalangwan Jurnal Pendidikan Agama, Bahasa Dan Sastra* 14, no. 1 (2024): 11–21, <https://doi.org/10.25078/kalangwan.v14i1.3522>.

learning process and learning outcomes. The diagnostic assessment steps are:

29

- a) Review prior learning data: Examine students' previous year's report cards to gain insight into their past academic performance.
- b) Understand incoming student abilities: Determine the current skill levels of the students who will be taught.
- c) Develop assessment tools: Create methods to evaluate students' abilities, such as written tests and observational techniques.
- d) Gather comprehensive student information: Explore various aspects of students' backgrounds, including family context, motivation, interests, learning resources, and other relevant factors specific to the students or school.
- e) Conduct and analyze assessments: Administer the designed assessments and process the collected data.
- f) Apply diagnostic findings to instruction: Use the assessment results as data to inform the creation of learning plans that are tailored to the students' abilities and individual characteristics.

4. Principle of Diagnostic Assessment

Applying assessment to learning must be based on assessment principles. The assessment principles in the *Merdeka Curriculum* are:

- a) Assessment is an essential and integrated component of learning. It functions as both a learning tool and a method for providing comprehensive information, acting as feedback for teachers, students, and parents/guardians. This feedback is crucial for guiding the development of learning strategies in subsequent stages.

²⁹ Adek CeraH Kurnia Azis and Siti Khodijah Lubis, "Asesmen Diagnostik Sebagai Penilaian Pembelajaran Dalam Kurikulum Merdeka Di Sekolah Dasar," *Pena Anda: Jurnal Pendidikan Sekolah Dasar* 1, no. 2 (2023): 20–29, <https://doi.org/10.33830/penaanda.v1i2.6202>.

- b) Design an assessment that is adapted to the assessment function, by giving freedom in determining the technique and when the assessment is carried out.
- c) Design fair, proportional, valid, and reliable assessments that aim to provide an overview of learning progress and provide decisions regarding action further.
- d) The results of the assessment can be used as reflection material for: students, educators, and parents/guardians to optimize the quality of learning.

There are several principles in diagnostic assessment, namely: 1) diagnosis is a decision-making process regarding students both individually and in groups to achieve their learning goals and achievements, 2) the application of diagnosis as a whole and proportionally by referring to several factors that cause students to experience problems in learning, 3) diagnosis and remediation cannot be separated because they go hand in hand.³⁰

5. Theory of Diagnostic Assessment

Diagnostic assessment is a targeted evaluation designed to pinpoint what students know and can do, as well as areas where they need support. The goal of this assessment is to provide educators with the information needed to tailor instruction to individual student abilities and current learning levels. In practice, diagnostic assessment has been utilized to effectively identify students' strengths and weaknesses in their learning. Sagita et. al. (2023), Under certain conditions, information about students' family background, school readiness, learning motivation, and interests can be used as input for learning planning. In-class assessment is an assessment carried out by the

³⁰ Adek Cerah Kurnia Azis and Siti Khodijah Lubis.

teacher, which includes assessment activities to obtain qualitative and quantitative grades.³¹ Classroom assessments are primarily conducted to gather data on student learning progress. This information serves as a diagnostic tool and provides valuable input for guiding students and determining necessary follow-up actions by teachers to enhance student competency. In this way, assessment in class is carried out continuously. This means that an assessment activity can be carried out after students have learned a competency. Reporting is carried out using information that has been obtained through assessments of each student's abilities and competencies.³²

In the *Merdeka* Curriculum, Diagnostic Assessment is a focused element designed to identify and understand the unique characteristics, competencies, strengths, weaknesses, and learning preferences of students. This type of assessment is categorized into two main areas: cognitive and non-cognitive. Cognitive diagnostic assessment specifically aims to reveal students' strong and weak points related to how they understand and process information. So, the diagnostic assessment is important for evaluating students before beginning the materials to identify student needs in the English subject.³³

The diagnostic assessments need to be studied as an assessment of learning in the *Merdeka* Curriculum in schools, both in terms of principles and procedures for implementing diagnostic assessments. The purpose of this initiative is to enhance teachers' knowledge and understanding of how to prepare and implement diagnostic assessments effectively in their classrooms.

³¹ Sagita Mawaddah and Keguruan dan, "Assesmen Dalam Kurikulum Merdeka Belajar."

³² Wulandari, Putrayasa, and Martha, "Efektivitas Asesmen Diagnostik Dalam Pembelajaran Berdiferensiasi Pada Pelajaran Bahasa Indonesia."

³³ Aringka, "Diagnostic Assessment In Implementing Curriculum Merdeka On Senior High School."

The goal is to ensure that these assessments are carried out properly to achieve their intended aims. Ultimately, utilizing diagnostic assessments helps teachers gain insight into students' individual learning needs, enabling them to create engaging and effective learning experiences that facilitate student understanding of the material as expected.³⁴

C. The Implementation of Curriculum

1. Definition of Curriculum

At first, the term curriculum was used in the world of sports in ancient Greece, originating from the words *curir* (runner) and *curere* (place to race). at that time the curriculum was interpreted as the distance that a runner needed to cover. People also call it a place to race or a place to run. Then the curriculum is applied to education into several subjects that students need to take from the beginning to the end of the program to achieve the required learning outcomes.

Learning methods in the curriculum include teaching strategies and learning activities designed to help students understand and master the material. As for assessment and evaluation in the curriculum, it includes formative assessments carried out during the learning process and summative assessments carried out at the end of the learning period to assess student achievement. The curriculum is a plan and arrangement regarding objectives, content, learning materials, and methods used for learning activities to achieve certain educational goals. The curriculum includes all learning experiences designed by the school so that it can help students achieve the desired educational outcomes. Educational objectives in the curriculum include competencies that must be achieved by students, such as knowledge, skills, and

³⁴ Adek CeraH Kurnia Azis and Siti Khodijah Lubis, "Asesmen Diagnostik Sebagai Penilaian Pembelajaran Dalam Kurikulum Merdeka Di Sekolah Dasar."

attitudes, as well as specific objectives for each subject or level of education. The content and learning materials include material that students must learn, and how this material can be organized according to student development.

Learning methods in the curriculum include teaching strategies and learning activities designed to help students understand and master the material. As for assessment and evaluation in the curriculum, it includes formative assessments carried out during the learning process and summative assessments carried out at the end of the learning period to assess student achievement.

The Educational Unit Level Curriculum (KTSP) represents a shift in curriculum development, decentralizing the process to the school and institutional level. Seen as a modern approach, KTSP aims to empower educational units with autonomy and foster collaboration, ultimately enhancing teaching methodologies. This framework grants independence to individual subjects and allows schools greater flexibility in managing resources and funding.

Following the implementation of the competency-based curriculum in the 2005/2006 academic year, a new policy introduced the KTSP in the 2006/2007 academic year, with a transition period for full implementation in schools concluding in the 2009/2010 academic year. These changes were driven by the overarching goal of improving and raising the overall quality of education in Indonesia.³⁵

The 2013 curriculum is designed to cultivate a well-rounded student by equally emphasizing cognitive (knowledge), affective (attitudes and values),

³⁵ Bulhayat, "Evaluasi Model CIPP Pada Implementasi KTSP Pendidikan," *Jurnal Al-Adabiya* 14, no. 1 (2019): 85–102.

and psychomotor (skills) development. Student progress is assessed across these three domains. This curriculum represents an interconnected system of planning, teaching, learning, and evaluation. It serves as the framework for determining the outcomes of the educational process and students' achievements based on its principles. A key feature of the 2013 curriculum is its focus on contemporary, scientifically-based learning activities. The fundamental principle guiding learning within this curriculum is to provide students with opportunities to explore and develop their individual potential according to their unique abilities.

According to Indonesia's National Education Standards Agency (BSNP), the *Merdeka* Curriculum is characterized by diverse in-class learning activities with a more focused content, allowing students ample time to delve into concepts and build strong skills. In this curriculum, teachers have the autonomy to select various teaching methods and resources, enabling them to personalize learning experiences to match the individual needs and interests of their students.³⁶

The *Merdeka* Curriculum's central idea is to cultivate independent and free thinking, which is seen as crucial for navigating crises and the various challenges of systemic change, with the curriculum itself being a key instrument. The curriculum dictates the content taught in classrooms and significantly impacts the pace and methods teachers use to address students' diverse needs. Recognizing this, the Indonesian Ministry of Education and

³⁶ Kemendikbudristek, *Salinan Keputusan Kepala Badan Standar, Kurikulum, Dan Asesmen Pendidikan, Kementerian Pendidikan, Kebudayaan, Riset, Dan Teknologi Nomor 008/H/KR/2022 Tentang Capaian Pembelajaran Pada Pendidikan Anak Usia Dini Jenjang Pendidikan Dasar Dan Jenjang Pendid, Kemendikbudristek, 2022.*

Culture has developed this independent curriculum as a vital component of the ongoing efforts to recover from a long-standing education crisis.

The *Merdeka* Curriculum is presented as a comprehensive in-house learning framework with novel concepts that inherently carry significant potential. It aims to provide students with sufficient time to deeply engage with foundational concepts, thereby strengthening their overall competencies. This approach empowers teachers to employ a diverse range of learning tools, enabling them to align instruction with the varied learning needs and interests of their students. Furthermore, a project focused on bolstering the achievements of the Pancasila Student Profile has been integrated, based on specific themes defined by the government. It's important to note that the goal of this project is not to fulfill specific learning objectives tied to subject matter content. Since the curriculum's implementation by the government, various seminars, training sessions, and workshops have been conducted for educators to introduce and guide them in its application. Simultaneously, several research studies have been undertaken to explore the *Merdeka* Curriculum, with some analyzing its potential implementation in higher education and others investigating the perceptions of teachers and students regarding this new educational framework.³⁷

³⁷ Muhamad Aziz Muslim and Sri Sumarni, "A Review on the Design and Characteristics of English Language Learning and Teaching in a Standard-Based Curriculum: Kurikulum Merdeka," *Jurnal Unimus* 6, no. 1 (2023): 2579–7549, <https://jurnal.unimus.ac.id/index.php/ELLIC/index>.

Thus, even though the Curriculum has been implemented by the government since the beginning of the 2022-2023 school year and there are seminars and training provided by the government and many institutions, teachers and educational practitioners still need more opportunities to understand the *Merdeka* Curriculum more deeply.

Therefore, the curriculum is designed to ensure that the educational process runs systematically and purposefully, and can help students achieve their maximum potential in various aspects, including cognitive, affective, and psychomotor. The curriculum is determined based on its fundamentals so every school is obliged to carry it out and implement it according to the technical and implementation instructions provided by the central government. And by the times, it can produce a generation of young people who can understand the material and various knowledge obtained from educators.

2. Types of Curriculum

a) Separated Curriculum

The existence of the term separated subject curriculum is because the learning material is presented in separate subjects, one separate from the others. separated subject curriculum is thought to originate from ancient Greece. The Greeks taught various fields of study such as literature, mathematics, philosophy, and science plus music. They established two triviums (grammar, rhetoric, and logic) and quadriviums (arithmetic, geometry, astronomy, and music) which became known as "*the seven liberal arts*" which were given to general education. In the Middle Ages, the aim of practical education became vocational. In the 19th century, various subjects began to develop rapidly. Every subject must first struggle before it is

recognized and accepted as a subject in school, such as mother tongue, foreign language, physics, biology, and so on.³⁸

b) Integrated curriculum

An integrated curriculum means eliminating the boundaries between various subjects and presenting study material in the form of units or wholes. With the roundness of the learning material, it is hoped that it will be able to form integral students, in harmony with the life around them, and what is taught at school is adapted to the child's life outside school. What is presented at school is adapted to the child's life outside school. Lessons at school can help students deal with various problems outside of school. Usually, this form of curriculum is implemented through unit lessons where it has a goal that contains meaning for students, which is expressed in the form of a problem.³⁹

c) Correlated Curriculum

A correlated curriculum is a pattern of organization of material or concepts studied in study lessons that are correlated with other lessons. The curriculum model integrates all fields of science, so that one field of knowledge is interconnected with another, or the subjects presented are interconnected with one another so that the curriculum model can see the integration between all subjects.⁴⁰

3. Theory of Curriculum

The core of curriculum theory is simple, namely, human life. Human life, although different, is the same, formed by several skills. Education seeks to prepare these skills carefully and perfectly. The skills that must be mastered to

³⁸ Sulaiman Sulaiman, "Pola Modern Organisasi Pengembangan Kurikulum," *Jurnal Ilmiah Didaktika* 14, no. 1 (2013): 60–73, <https://doi.org/10.22373/jid.v14i1.489>.

³⁹ Sulaiman.

⁴⁰ Sulaiman.

be able to enter life vary greatly, depending on the level and type of environment. Differentiates between the curriculum and the curriculum development process. The curriculum is the result of a curriculum development system, but the development system is not a curriculum. The curriculum is a structured set of learning objectives. So, the curriculum is concerned with objectives and not with activities. Based on the curriculum formulation, students' learning experiences become part of teaching.⁴¹

The *Merdeka Curriculum Paradigm*. This research aims to find out about teacher performance evaluation tools and then evaluates learning planning based on components that have been designed, namely teacher modules. The importance of the *Merdeka Curriculum* is to design learning in a structured and directed manner; therefore, the existence of the *Merdeka Curriculum* can give teachers the confidence to make decisions in the learning process. Teachers can also adapt the curriculum to students' needs and interests, thereby improving the quality of teaching. Then, the *Merdeka Curriculum* is designed to take into account student diversity in terms of interests, talents, and learning styles. This allows each student to feel valued and involved in the learning process.⁴²

The *Merdeka Curriculum Learning* aims to equip students with a wide range of relevant competencies and skills to support their future growth and development. With the freedom to choose the field of study and learning practices that become future needs and projections coming, therefore, the concept of an independent learning curriculum is the same as humanistic

⁴¹ Nur Ahid, "Konsep Dan Teori Kurikulum Dalam Dunia Pendidikan," *Islamica* 1, no. 1 (2017): 36–37.

⁴² Dian Puji Lestari, Siti Lestari, and Nularsih Nularsih, "English Teacher Perception of Implementation Kurikulum Merdeka in English Teaching Learning Process," *Bahtera: Jurnal Pendidikan Bahasa Dan Sastra* 23, no. 1 (2024): 1–15, <https://doi.org/10.21009/bahtera.231.01>.

education which emphasizes freedom, choice, sensitivity, and responsibility of students. Humanistic education applies a learning concept that looks more at the development of students' personalities and focuses on their potential to seek and discover the abilities that students have.⁴³

The *Merdeka* Curriculum is a refinement of the 2013 curriculum. This curriculum is designed to optimize learning outcomes according to student needs. Learning is designed according to the results of assessments at the beginning, middle, and end of learning. The *Merdeka* Curriculum also emphasizes optimizing learning outcomes according to student capacity. Therefore, a learning design is needed that is oriented to the needs of students. Assessment can also be done at the beginning of learning or the end of learning. Profiling of student needs in the independent curriculum is designed through initial learning assessments. Substantively, several types of assessment are practiced in the *Merdeka* Curriculum.⁴⁴

D. English Language Teaching (ELT)

1. Definition of English Language Teaching

English Language Teaching (ELT) is a scientific discipline that focuses on methodology and practice in the process of teaching English to students. This field includes a variety of approaches, techniques, and strategies to help students develop their English language skills.

English Language Teaching (ELT) involves teaching skills such as listening, speaking, reading, and writing, as well as linguistic components such

⁴³ Ikhwanul Muslimin, "Konsep Dan Implementasi Kurikulum Merdeka Belajar Pada Lembaga Pendidikan Islam Studi Kasus Di Madrasah Se-Jawa Timur," *Jurnal Administrasi Pendidikan Islam* 5, no. 1 (2023): 43–57, <https://doi.org/10.15642/japi.2023.5.1.43-57>.

⁴⁴ Arifin Nur Budiono and Mochammad Hatip, "Asesmen Pembelajaran Pada Kurikulum Merdeka," *Jurnal Axioma : Jurnal Matematika Dan Pembelajaran* 8, no. 1 (2023): 109–23, <https://doi.org/10.56013/axi.v8i1.2044>.

as grammar, vocabulary, and pronunciation. The goal of ELT is to help students achieve proficiency that enables them to use English in academic, professional, or social contexts.

In the context of English Language Teaching (ELT), instruction typically begins with basic, familiar vocabulary and simple sentence structures (such as "pen," "pencil," "chair," "table"). This allows students to readily grasp the foreign language symbols introduced by their teacher and gain direct, practical experience, even if initial spoken sentences aren't fully comprehended. Recognizing that students will have varying levels of motivation in learning English, teachers often address low motivation by directly engaging with those students. This might involve providing tailored instruction, particularly for students who may be less confident or hesitant to speak English.

Because English language Teaching in Indonesia is taught as a foreign language and becomes a form of learning, especially in the classroom, Thus, the role of teachers is very important because they are the main source and facilitator of knowledge and language skills. A teacher teaching English is expected to play two roles at once teaching English and making the teaching-learning process as interesting as possible to involve students in learning.⁴⁵

2. Characteristics of English Language Teaching

The following are the characteristics of English subjects based on⁴⁶:

- a) English language teaching incorporates a diverse range of text types, including narratives, descriptions, specific-purpose texts like short messages

⁴⁵ Urip Sulistiyo, "English Language Teaching and EFL Teacher Competence in Indonesia," *Fourth International Seminar on English Language and Teaching*, no. 1994 (2016): 396–406, <https://ejournal.unp.ac.id/index.php/selt/article/view/7001>.

⁴⁶ Kemendikbudristek, *Salinan Keputusan Kepala Badan Standar, Kurikulum, Dan Asesmen Pendidikan, Kementerian Pendidikan, Kebudayaan, Riset, Dan Teknologi Nomor 008/H/KR/2022 Tentang Capaian Pembelajaran Pada Pendidikan Anak Usia Dini Jenjang Pendidikan Dasar Dan Jenjang Pendidid.*

and advertisements, and authentic materials. These texts are presented in various formats: written, spoken (both monologues and dialogues), visual, audio, and multimodal (combining verbal, visual, and audio elements). Both original and adapted texts are used for instruction, delivered through both traditional paper-based methods and digital screens. This approach aims to develop students' technological literacy, enabling them to effectively navigate digital information.

- b) Teachers have the flexibility to select the type of English text they teach based on the specific circumstances of their classroom. Instruction can begin with text types covering familiar topics, which helps students grasp the content they are reading and subsequently produce similar texts orally and in writing. Following this, teachers can introduce new text types, guiding students to understand their structure and features so they can eventually create their own oral and written work in these new formats. Furthermore, the selection of text types can be aligned with situations commonly encountered by students both in school and at home, providing them with opportunities to study and practice using the language in authentic, real-life contexts.
- c) The learning process focuses on students (learner-centered), that is, the learning process must focus on efforts to change student behavior (which originates from being unable to become capable). being able to use English in six language skills in various types of texts.
- d) English learning is focused on students' language skills according to the stages of language development. English learning includes elements of receptive skills (listening, reading, and viewing) as well as productive skills (speaking, writing, and presenting).

3. Theory of English Language Teaching

In general, it can be said that topics that are considered important at a certain period are very much influenced by the (educational) paradigm that prevails at that time. like during the golden age of theory *Behaviorism* in the 1950s to the 1970s, many research topics referred to this theory. We often find titles such as *The Role of Pattern Practice Toward Students' Speaking Ability or Teaching Grammar Through Drills in Linguistic Research*. When a new understanding emerged, namely *Cognitivism*, in the 1960s, it was assumed that the learning process was not only demonstrated by the existence of changes in behavior as espoused by *Behaviorism* but also changes in schema structure in a person's area of cognition which cannot always be observed, then research titles such as *The Effect of Motivation on Students' English Achievement* or *The Relationship between Attitude and Students' Speaking Ability*. Linguistic researchers are competing to find out how strong or how big the influence and role of cognitive structures is on the language learning process, both English as a first language and as a second or foreign language. At the end of the 1980s, a new trend emerged in the field of education, namely *Social Constructivism*. Adherents of this ideology believe that knowledge (which is one of the learning targets in school) is obtained through the social activities of the learners alone. In other words, they say that knowledge is socially constructed.⁴⁷

The aim of English Language Teaching at primary, secondary, and university levels is to help students to communicate effectively in the language. Humans can communicate in language naturally, the ability to read, write, speak, and understand language when used in the communication process.

⁴⁷ P D Suratinah and S Sili, "Reviewing Research in ELT," *Pustaka.Ut.Ac.Id*, 1992, 1-55, <https://pustaka.ut.ac.id/lib/wp-content/uploads/pdfmk/PBIS4401-M1.pdf>.

Excellent communication is important for proper interactions with others and for academic purposes.⁴⁸ With real communicative context, the teacher can make the best choice, because students can exchange information in a real way, so language and phrases will emerge that are appropriate to the situation.

In fact, according to the history of teaching foreign languages or English, the development of teaching methods has begun since the implementation of the Grammar-Translation method (grammar-translation), Mimicry-Memorization (imitation-remembering), often called the Army method because it was carried out to teach American Army troops. before being assigned abroad), and Cognitive Approach (communicative approach). Then, various other methods followed, such as Direct Method, Communicative Approach, Humanistic Approach, and Natural Approach. From the various terms for how to teach language, it is evident that there was no standard definition of teaching method before it was explained by Richards & Rodgers (1982, 1986).⁴⁹

⁴⁸ Beatrice B Adeyemi, "Ifè Social Sciences Review Relevance of Learning Theories to English Language Teaching," *Ifè Social Sciences Review* 2021, no. 1 (2021): 73-80, www.issr.oauife.edu.ng/journal.

D. Conceptual Framework

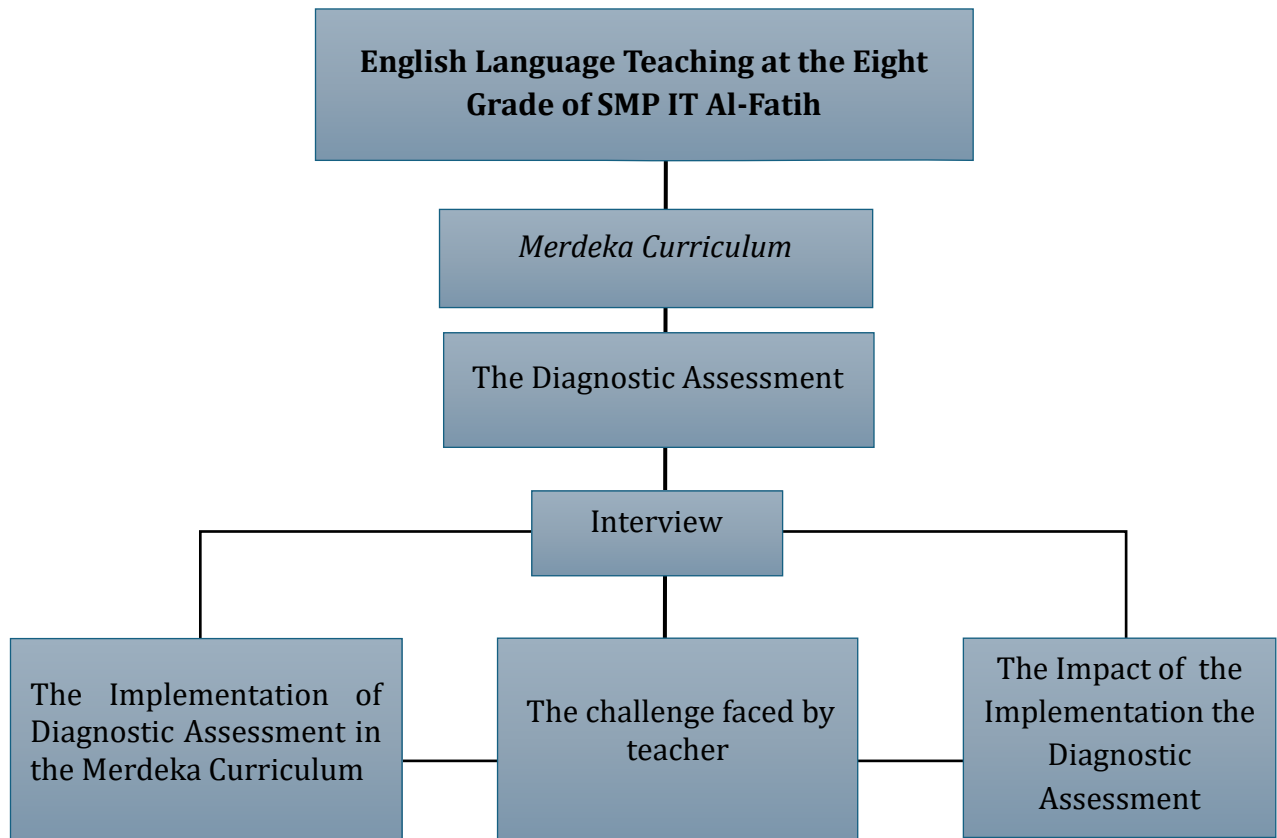

Figure 2.1. Conceptual Framework

This conceptual framework aims to describe in depth how English teaching in eighth grade at SMP IT Al Fatih is implemented in the context of the *Merdeka Curriculum*. This teaching focuses on developing language skills such as listening, speaking, reading, and writing with an interactive and student-centered communicative approach. The *Merdeka Curriculum* provides flexibility for schools and teachers to adjust the curriculum to the needs and potential of students.

Diagnostic assessments are used to identify students' strengths and weaknesses before learning begins, and teachers can design more effective learning that suits students' needs. Observations are carried out to monitor the implementation of diagnostic assessments, record what methods and tools

teachers use, as well as student reactions and involvement, and also evaluate how assessment results are used to design appropriate learning. It can be seen that teachers may face many challenges such as a lack of understanding and training in diagnostic assessments, difficulties in adjusting teaching methods to assessment results, limited time and resources, and difficulties in motivating students.

The implementation of diagnostic assessments has a significant impact, such as allowing teachers to design more appropriate learning, increasing student participation and motivation, identifying students who need additional assistance, and improving overall student learning outcomes. So Interviews were conducted to collect in-depth data on teachers' and students' experiences and views on the implementation of diagnostic assessments. Questions covered teachers' experiences, challenges faced, and the impact of assessments on learning and learning outcomes. It can be concluded, that the study can explore and analyze various aspects of the implementation of diagnostic assessments in the *Merdeka* Curriculum at SMP IT Al-Fatih and can provide valuable contributions to the field of education.

CHAPTER III

RESEARCH METHODOLOGY

A. Research Ethics

In conducting this research related to the title "The Diagnostic Assessment of English Subject Implemented in *Merdeka* Curriculum at Al-Fatih School", the researcher has followed strict research ethics principles. where the researcher has obtained written consent from all participants, both from the school, especially the teacher who are directly involved in English language learning and have implemented the *Merdeka* Curriculum in the classroom, before conducting interviews. The confidentiality of the data obtained has been properly maintained by the researcher, and all research results has been reported, honestly, and of course transparently.

There are 4 ethical rules, namely: *First*, honesty, the truth, or the absence of fraud related to research. *Second*, privacy and freedom from unwarranted public interference. *Third*, confidentiality, where the data that has been collected is a secret between the researcher and the school, which cannot be distributed arbitrarily. *Fourth*, fidelity, in research terms, is accuracy in recording and reporting data.⁵⁰

The concept of research ethics is multifaceted and has been the subject of considerable and passionate discussion globally (Hammersley & Trianou, 2012; Iphofen & Tolich, 2018; Van Den Hoonaard, 2011; Von Unger Et Al., 2016). In certain countries, mandatory ethical review by institutions extends beyond

⁵⁰ Brunel University, "Research Ethics Handbook: Philosophy, History and Theory" 1 (2015): 1-56, <https://www.brunel.ac.uk/research/Documents/Resethics-hb.pdf>.

medical research to encompass social science research, including qualitative studies.⁵¹

B. Research Type & Location

This research uses a type of descriptive qualitative method, the research focuses on diagnostic assessments that have been implemented in the *Merdeka* curriculum in English language Teaching (ELT) at Al-Fatih School. As described by Sugiyono (2014), qualitative researchers will jump right into the object, and perform exploration with *a set of guiding questions*, so problems will arise found clearly. Through research in this model, researchers will explore an object. According to Jonathan (2006), qualitative research can be defined as a process that tries to get a better understanding of the complexities inherent in human interactions. According to Rusandi et al. (2019), qualitative descriptive research is one of the types of research included in this type of qualitative research. Descriptive research is a research strategy in which the researcher investigates events and phenomena in the lives of individuals and asks a person or group of individuals to tell about their lives. This information is then retold by the researcher in a descriptive chronology.⁵²

This research has been conducted at Al Fatih School, located at Jl. A. Mappanyukki No.50 B, Kunjung Mae, Kec. Mariso, Kota Makassar, Sulawesi Selatan 90125. The location for this research has been chosen by researchers focused on diagnostic assessments that have been implemented in the *Merdeka Curriculum* in English language Teaching (ELT).

⁵² Rusandi and Muhammad Rusli, "Merancang Penelitian Kualitatif Dasar/Deskriptif Dan Studi Kasus," *Al-Ubudiyah: Jurnal Pendidikan Dan Studi Islam* 2, no. 1 (2021): 48–60, <https://doi.org/10.55623/au.v2i1.18>.

C. Research Approach

This research uses a qualitative descriptive method, to describe the method applied by teachers in the English language teaching process. The subject of this research is an English teacher at Al-Fatih school, especially at the junior high school level. The instruments used in this case research carried out are observation, interviews, and documentation. The technique of analyzing data is identifying by reducing, displaying, and drawing conclusions from the collected data.

Qualitative research approaches are shaped by the Weberian naturalistic-interpretative paradigm, the post-positivist viewpoint of critical theory, and post-modernism as articulated by thinkers like Baudrillard, Lyotard, and Derrida. Consequently, qualitative research yields context-rich information that can reveal patterns or theories explaining social phenomena.⁵³

Meanwhile Qualitative research is only an anecdote (a short incident or event that has an entertaining nature) or is only descriptive, and is carried out in a casual (ordinary) and unsystematic manner. Qualitative research is certainly more than an anecdote, qualitative research is just as complex as quantitative research.⁵⁴

As described by Sandi et al., (2015), qualitative research, while gaining recent prominence, is also referred to as post-positivistic due to its grounding in post-positivism. It's considered an "artistic" approach because its research process tends to be less structured and more flexible. Furthermore, it's known as an interpretive method because it heavily emphasizes the researcher's

⁵³ Gumilar Rusliwa Somantri, "Memahami Metode Kualitatif," *Makara Human Behavior Studies in Asia* 9, no. 2 (2005): 57, <https://doi.org/10.7454/mssh.v9i2.122>.

⁵⁴ Tutik Rachmawati, "Metode Pengumpulan Data Dalam Penelitian Kualitatif," *UNPAR Press*, no. 1 (2017): Hal. 29.

interpretation of the data gathered in the field. Therefore, qualitative research methods prioritize a deep understanding of a specific problem or issue rather than aiming for broad generalizations.⁵⁵ This approach can help the researchers gain a deep understanding of the implementation of the *Merdeka* Curriculum at Al Fatih School and how diagnostic assessments are used in effective learning processes.

D. Research Subject

In this research, the research subject is English teachers and three eighth-grade students related to the implementation of diagnostic assessments specifically in junior high school classes at Al Fatih School. where the teacher has been provided insight into teaching methods and implementation of the *Merdeka* Curriculum during learning, and also has been explained students' learning experiences and the effectiveness of diagnostic assessments. Research subjects are people, places, or objects observed in the context of research as targets.⁵⁶ Thus, the existence of research subjects can help the researchers to expand the data needed, rather than researchers prepare teachers as research subjects related to the title "The Diagnostic Assessment of English Subject Implemented In *Merdeka* Curriculum of eighth-grade at Al-Fatih School" in data collection.

E. Data Collection Procedures

The title of this research is "The Diagnostic Assessment of English Subject Implemented In *Merdeka* Curriculum of eighth grade at Al-Fatih School", that to conduct the data collection procedure in the research will

⁵⁵ Rusandi and Muhammad Rusli, "Merancang Penelitian Kualitatif Dasar/Deskriptif Dan Studi Kasus."

⁵⁶ 2019 Bruno, Latour, "Metode Penelitian," *Journal of Chemical Information and Modeling* 53, no. 9 (2019): 1689, https://eprints.umk.ac.id/14/5/BAB_III.pdf.

involve several stages. *First*, the researcher has been designed an interview schedule that is agreed upon by the school and participants. Then, an interview with the teacher has been conducted to gain more in-depth insight and information related to the research. *Finally*, the researcher has been collected and analyze *Merdeka curriculum* documents and the results of student diagnostic tests carried out by teachers.

This research has been conducted at Al-Fatih school, which implemented diagnostic assessments in English subjects in the *Merdeka Curriculum*. The techniques used for data collection in this research are:

1. Interview

This research also uses semi-structured interview techniques. In a semi-structured interview, the researcher prepares a list of questions before interviewing the respondent, in this case, the English teacher at Al-Fatih School. This ensures that the researcher can collect the necessary information from the list of questions prepared before the interview. Researcher has been used cameras or recorders to collect information or documentation.

2. Documentation

This research uses documentation techniques, there are recording the results of observations and interviews at Al-Fatih school. The documentation in this research also aims to help researchers strengthen and complete information regarding the types of assessments, especially diagnostic assessments used by English teachers at the Al-Fatih school. This allows researcher to collect broad and in-depth information related to the phenomenon under study. The documentation obtained includes interview recordings, teaching modules, and instruments used by teachers in assessments to evaluate student learning outcomes.

F. Research Instrument

As described by Salma (2023), with the existence of a research instrument, the researcher has been knew the data resources to be researched and the type of data, data collection techniques, collection instruments the data, steps for preparing research instruments as well as knowing the validity, reliability, level difficulty in distinguishing power, and distraction/distractor data in a study.⁵⁷

This research has been used the instruments related to the title "The Diagnostic Assessment of English Subject Implemented In *Merdeka* Curriculum of the Eight grade at Al-Fatih School" According to Salma (2023), Research instruments are specifically designed for a particular study and are generally not transferable to other research projects. Therefore, researchers must develop their own instruments tailored to their specific needs. The structure of these instruments can vary significantly across different studies due to the unique objectives and operational procedures of each research technique. Consequently, the data gathered through a specific instrument will be analyzed, presented, and potentially used to test the hypotheses formulated within that particular study.⁵⁸ The instruments used, namely:

1. Interview

Interviews are divided into three types, namely In-depth Interviews, Semi-structured Interviews, and Structured Interviews.

Firstly, In-depth interviews, also known as unstructured interviews, involve a free conversation between the interviewer and the participant. The interviewer asks open-ended questions without a predetermined format,

⁵⁷ Salmaa, *Instrumen Penelitian*, Deepublish, 2023, <https://penerbitdeepublish.com/instrumen-penelitian/>.

⁵⁸ Salmaa.

allowing the conversation to develop naturally according to the participant's responses. **Second**, Semi-Structured Interviews Semi-structured interviews combine structured and unstructured elements. The interviewer prepares a set of guiding questions but remains flexible to deviate based on the participant's later responses. This allows for consistency between interviews while providing the flexibility to explore unexpected topics in depth. **Third**, Structured interviews involve a list of questions asked in a specific order, ensuring uniformity among all participants. This method is efficient for comparing responses and reducing bias, as all participants are treated equally. The instrument used in this study is a semi-structured interview that will be used to gain in-depth insight into the implementation of diagnostic assessment in the *Merdeka Curriculum* from the perspective of an eighth-grade English teacher at Al-Fatih school. to explore teachers' experiences in implementing diagnostic assessments, including the challenges faced and the strategies used to overcome these challenges.

G. Data Processing and Analysis Techniques

This research has been transcribed in research to collect data. Interview recordings have been used for word-for-word transcriptions, as well as sentences that capture more than just words and spoken sentences but also non-verbal cues, pauses, and emotional expressions. A consistent transcription notation system has been used to accurately represent the elements in this study. Transcripts have been anonymized by replacing any identifying information with pseudonyms or codes to protect the confidentiality of sources, especially the teacher.

The data analysis process includes interpreting text and visual data. This includes preparing the data to be analyzed, carrying out various analyses,

exploring a deeper and deeper understanding of the data, displaying the data, and interpreting the broader meaning of the data. According to B. Milles and Huberman (2014), In qualitative data analysis, the information gathered primarily consists of words rather than numerical figures. This data, collected through methods like observation, interviews, document summaries, and recordings, often undergoes initial processing but ultimately remains in textual form, frequently organized as extended transcripts. The analysis process from this perspective involves three interconnected stages: data reduction, data presentation, and conclusion drawing.⁵⁹ This research includes several general methods that provide an overall picture of the qualitative data analysis process.

1. Data Condensation

In this step, the researcher collects data from teachers through interviews. The researcher then read, studied, analyzed, and removed extraneous data before organizing the data based on teacher responses from interviews.

2. Data Display

According to Miles and Huberman (2014), The most common way to present findings in qualitative research is through narrative text. This method of data presentation facilitates understanding of the observed phenomena and informs subsequent research planning based on these insights. Additionally, Miles and Huberman propose that data can also be effectively displayed using visual formats such as graphs, matrices, networks, and charts,

⁵⁹ Johnny Miles, Matthew B; huberman, A. Michael; and Saldana, *Qualitative Data Analysis, A Methods Sourcebook, Jurnal Sains Dan Seni ITS*, vol. 6, 2017, <http://repositorio.unan.edu.ni/2986/1/5624.pdf><http://fiskal.kemenkeu.go.id/ejournal><http://dx.doi.org/10.1016/j.cirp.2016.06.001><http://dx.doi.org/10.1016/j.powtec.2016.12.055><https://doi.org/10.1016/j.ijfatigue.2019.02.006><https://doi.org/10.1>

alongside narrative descriptions.⁶⁰ In this second step, the researcher shows or displays data containing the perceptions of English teachers related to diagnostic assessment in the English language learning process. Then, the researcher displays the results of the interview in narrative writing.

3. Draw Conclusions

After completing the first and second steps in data analysis, the final step in this research is drawing and verifying conclusions. After the data presentation process, the researcher makes conclusions from the data obtained to answer the research questions above.

4. Verification

The research must have accuracy or credibility of data, findings, and interpretations using various strategies. The researcher use member checking to ensure that the data in this study is accurate and that this study is trustworthy. According to Creswell and David Creswell (2018), Member checking is used to determine the accuracy of qualitative findings by taking final reports or particular descriptions or themes back to participants and determining whether participants feel they are accurate.⁶¹ This does not mean taking back raw transcripts to check for accuracy; rather, the researcher takes back polished or semi-polished portions of the product, such as key findings, themes, case analyses, grounded theories, cultural descriptions, and so on. This procedure may involve conducting follow-up interviews with participants in the study and providing them with an opportunity to comment on the findings.⁶² The purpose of member checking

⁶⁰ Miles, Matthew B; huberman, A. Michael; and Saldana.

⁶¹ John W Creswell and J David Creswell, *Research Design: Qualitative, Quantitative, and Mixed Methods Approaches* - John W. Creswell, J. David Creswell - Google Books, SAGE Publications, Inc., 2018.

⁶² Creswell, "Metodologi Penelitian" 01 (2016): 1-23.

is to verify the validity of the data collected by the researcher by sending it back to the participants who participated in the study. The researcher does not intend to take raw transcripts to verify their accuracy.

However, the researcher contributes to refined products such as themes, case studies, grounded theories, cultural descriptions, etc. In this procedure, researchers transcribe the interview results. Then, participants are given/shown the transcript results to prove that what they said during the interview was accurate with what was transcribed.

CHAPTER IV

FINDINGS AND DISCUSSION

A. The Implementation of the Diagnostic Assessment of *Merdeka* Curriculum

Data were collected through semi-structured interviews with four research participants: an English teacher and three eighth-grade students. The interviews aimed to gather information about the implementation of diagnostic assessment of the *Merdeka* curriculum in English at SMP IT Al-Fatih. The interviews were conducted from March 19 and April 11-12, 2025. One interview was conducted with each participant. The results are displayed using their initials: Teacher HD, Student A, Student B, and Student C.

The first face-to-face interview with the English teacher with the initials HD was conducted on March 19, 2025. Based on the results of the interview, HD explained that diagnostic assessments had been implemented since the beginning of the implementation of the *Merdeka* curriculum, especially for eighth-grade students. The teacher explained that the *Merdeka* curriculum has been implemented at Al-Fatih School since 2021.

The teacher explained that the *Merdeka* Curriculum has been implemented at SMP IT Al-Fatih since 2021. In its implementation in the eighth grade, the learning process begins with a diagnostic assessment that includes two aspects: cognitive and non-cognitive.

“In the eighth grade, the implementation of the Merdeka curriculum begins with a diagnostic assessment, both cognitive and non-cognitive. For the cognitive assessment, we analyze the learning objectives aligned with the curriculum. After identifying the learning objectives, we ask students questions.”

HD elaborated that for the cognitive aspect, the assessment is developed based on the analysis of learning objectives according to the *Merdeka Curriculum*. After the learning objectives are identified, teachers formulate questions to be given to students using the 262 method.

“At SMP IT Al-Fatih, we use the 262 method, which consists of two questions from the previous level, one question from the current material, and two questions from the next level.”

Meanwhile, for the non-cognitive aspect, the school collaborates with the Institute of Psychology at Makassar State University (UNM) in conducting the assessment.

“For non-cognitive assessments, we collaborated with the Institute of Psychology at Makassar State University (UNM) to help conduct diagnostic assessments using the Merdeka Curriculum.”

HD explained that the assessment is developed after teachers receive training from the school supervisor, including training on the 262 method. During the process, the creation of questions is also monitored to ensure they remain consistent with the assessment objectives.

“Before preparing the assessment, we received training from the school supervisor, which included training on the 262 method. While developing the questions, we also monitored them to ensure they were consistent with the assessment objectives.”

The assessment results are then categorized into three levels of student understanding: not yet understanding, partially understanding, and fully understanding. Students are then grouped into learning groups according to these results.

“After analyzing the assessment, the results are grouped into three categories: 1) Does not yet understand the material, 2) Partially understands the material, 3) Completely understands the material.”

“When implemented in classrooms, teaching materials and methods are modified to suit the students’ level of understanding.”

Students who have fully understood the material are given additional challenges and are assigned the role of mentors for other students who are still struggling.

“Meanwhile, students who have fully understood the material, in addition to the additional challenges they are given, are engaged as mentors for their friends who are still struggling.”

In assessing the cognitive aspect, the teacher uses Bloom’s Taxonomy as an indicator, ranging from C1 to C6.

“We use Bloom’s Taxonomy as an indicator for the assessment. In English subjects, we apply comprehension levels from C1 to C6, starting with comprehension and analysis and moving on to the application of the material.”

The implementation of assessment focused on cognitive diagnostics within the *Merdeka* Curriculum begins by creating an assessment schedule tailored to the needs and readiness of the class. The teacher then identifies the assessment material based on the simplification of basic competencies provided by the Ministry of Education and Culture. Following this, the teacher develops assessment questions comprising several parts: two questions aligned with the learning achievements of that grade level, six questions from topics one grade level below, and two questions from topics two grade levels below. These questions are aligned with topics that serve as prerequisites for engaging in learning at the current level, and the assessment is administered to all students, whether learning in person or remotely. After the assessment is conducted, the teacher processes the results by categorizing student understanding into three groups: “fully understands,” “partially understands,” and “does not understand,” and calculate the class average.

Based on these results, students are then grouped into three categories: students with average scores will follow learning according to the phase in the

ATP, students below average receive special assistance for competencies not yet met, while students above average receive enrichment. The teacher also conducts reassessments on topics that have been taught before moving on to new topics, to ensure that learning is adjusted to the average ability of the students.

This diagnostic process can be repeated in the form of varied formative assessments to monitor the development of students' competencies. Each category of understanding has different learning follow-ups; for example, students in the “fully understands” category can proceed to the next competency, while students who “partially understand” or “do not understand” are given remedial learning with an emphasis on concepts or the use of more concrete learning aids.

All these steps demonstrate that diagnostic assessment is not merely carried out as an initial formality but is truly used as a basis for designing adaptive learning strategies according to the needs of students in the class. It can be understood that diagnostic assessment not only aims to identify students' weaknesses but also to recognize their strengths. The results of this assessment are crucial for the teacher to use as a foundation in designing learning strategies that align with the characteristics of their students. Iskak et al. (2023) affirm that the implementation of diagnostic assessment provides various benefits in supporting the effectiveness of the teaching and learning process.⁶³

⁶³ “Iskak, K. N. N., Thamrin. A. G. , & Cahyono. B. T. (2023). *The Implementation of Diagnostic Assessment as One of The Steps to Improve Learning In The Implementation Of The Independent Curriculum*. Jisae: Journal of Indonesian Student Assessment and Evaluation, 9(1), 15-25”

The practices implemented by HD reflect a good understanding of these principles. In an interview, HD explained that before starting learning, she always administers an initial assessment that evaluates students' basic abilities, such as their understanding of vocabulary and grammar. This assessment is a form of cognitive evaluation aimed at determining the extent to which students understand the prerequisite material needed to follow the subsequent lessons. Based on the results of this assessment, the teacher divides students into groups based on their level of understanding and then adjusts the teaching approach used. For example, students who still have low abilities will receive additional guidance and simpler explanations, while students who have already demonstrated mastery of the material will be given enrichment exercises.

Not only the cognitive aspect, but HD also pays attention to the non-cognitive aspects of students, such as learning motivation, self-confidence, and engagement in the learning process. The teacher observes students' attitudes during learning activities, including how they respond to the material and interact in class. Observations of these aspects are then considered in developing more targeted learning strategies, such as providing a personal approach to students who appear less confident or designing group work to enhance collaboration and student self-esteem. This practice shows that the teacher not only focuses on academic achievement but also pays attention to the emotional and social conditions of students as part of a holistic learning process.

Thus, the approach taken by the teacher demonstrates a comprehensive implementation of diagnostic assessment, in line with the spirit of the *Merdeka*

Curriculum, which emphasizes the importance of learning differentiation and the recognition of the diversity of student characteristics.

B. The challenge faced by the teacher

The teacher faced the challenge that HD revealed that there are several challenges in implementing diagnostic assessment, one of which is the difficulty of formulating questions appropriate to students' backgrounds. Some students have never learned English at a previous level, so they are truly starting from scratch.

"However, there are students who never learned any English in primary school, so they are truly starting from scratch."

HD also mentioned that time constraints are a major obstacle in implementing differentiated learning in the Independent Curriculum.

"One of the main obstacles is time constraints. With only two hours of class time per week, it is difficult to provide differentiated learning opportunities."

The Teacher also experiences difficulties in choosing the right learning methods for students with different abilities, as well as maintaining the focus of students who have already mastered the material.

"Among these is the difficulty of identifying appropriate learning methods for students with different levels of comprehension. Furthermore, students who understand the subject matter often find it difficult to organize and maintain their focus in class."

HD revealed that in the implementation of diagnostic assessment, there are several rather significant challenges. One of the main obstacles faced is formulating questions that are appropriate to students' backgrounds and learning experiences. Some students in her class have never learned English at the elementary school level, so they are truly starting from scratch. This requires the teacher to develop assessment instruments very carefully so that

they are not too difficult for beginner students, yet can still depict their basic abilities.

In addition, time constraints are the most frequently felt obstacle in implementing differentiated learning as recommended in the *Merdeka Curriculum*. With only two lesson hours per week, the teacher finds it difficult to provide different treatment according to the needs of each student. This certainly impacts the effectiveness of diagnostic assessment implementation, because assessment results cannot always be immediately followed up with ideal learning strategies.

HD also mentioned another challenge, namely the difficulty in determining appropriate learning methods for students with varying levels of ability. She faces a dilemma when having to arrange strategies so that students with low understanding can still follow the learning without hindering the progress of students who have already mastered the material. In fact, students who already understand the lesson often have difficulty maintaining focus in class because they feel unchallenged. These challenges are in line with the opinion of Candra et al. (2023), who state that one common obstacle in the implementation of differentiated learning is the difference in students' learning readiness within one class.⁶⁴

Not all students have the same abilities and learning styles. Some students may excel in certain areas but be weak in others. These differences require the teacher not only to understand the individual characteristics of students but also to design learning activities that can accommodate this diversity. In reality, combining various abilities and learning styles in one

⁶⁴ Candra Avista Putri et al., "*Analisis Kritis Asesmen Diagnostik Untuk Menentukan Gaya Belajar Dalam Pembelajaran Berdiferensiasi*" 03, no. 02 (2023): 36–46.

learning scenario is not easy, especially when limited by available time and resources.

C. The Impact of the Implementation of the Diagnostic Assessment

The impact of the implementation of diagnostic assessment in the classroom, HD explained that the impact of diagnostic assessment is not immediately visible. The learning process continues naturally, without rushing to complete the material. The teacher ensures that students truly understand the material before moving on to the next topic.

“In reality, the impact was not immediately visible. The learning process continued, especially because we did not rush to deliver the material. I mean, if a student does not understand a material, we make sure they understand it thoroughly before moving on to the next material.”

This assessment is very helpful in determining the appropriate teaching strategy, such as group or independent learning.

“By knowing the students' level of understanding, I can determine the most appropriate method, such as group learning, independent learning, or other methods.”

HD mentioned that diagnostic assessment has a positive impact on students' understanding of English lessons.

“Alhamdulillah, the impact is significant. Through diagnostic assessment, I can identify subjects that need focus so that students' learning outcomes can also improve.”

Students' communication skills in English also improved, supported by the habit of speaking English at school through programs like Public Speaking, Morning Speaking, and English Corner.

“Among our programs is the Public Speaking Program, which aims to improve students' confidence in speaking English. Furthermore, we hold a 'Morning Speaking' activity every morning.”

“For example, before leaving the classroom or asking permission to go to the bathroom, they should speak English.”

"In addition, there is an English Corner program that provides students with opportunities to practice speaking English outside of the classroom."

To make learning more engaging, the teacher also uses various teaching tools such as games, digital apps, videos, and puzzles.

*"I use a variety of learning tools, including digital games and apps like Kahoot, Wordwall, and Canva."
"I also use videos and puzzles as tools to make learning more interactive."*

Finally, HD emphasized that diagnostic assessment is the main foundation for designing lesson plans.

"By understanding students' initial abilities, I can design more effective learning that fits their needs."

The implementation of the *Merdeka* Curriculum is a significant change in the Indonesian education system, aiming to adapt to the rapidly advancing developments in science and technology. As stated by Afri Nida (2024), curriculum renewal is crucial for enhancing the effectiveness and efficiency of the learning process to achieve better quality education. One of the main components of the *Merdeka* Curriculum is diagnostic assessment, which serves to identify students' learning needs before the learning process begins.⁶⁵ This aligns with HD's explanation that while the impact of diagnostic assessment may not be immediately apparent, it allows the teacher to ensure students thoroughly understand the material before moving on to the next topic. This creates a more meaningful and student-centered learning process.

Furthermore, diagnostic assessment supports the goal of differentiated learning, which is a hallmark of the *Merdeka* Curriculum. Through this assessment, HD can determine appropriate learning strategies, such as group

⁶⁵ Afri Nida, *"English Teacher's Difficulties In The Implementation Of Merdeka Curriculum At SMPN 2 Cilogok Banyumas Regency"* (2024).

learning, independent learning, or enrichment. This approach not only positively impacts students' learning outcomes but also improves their English communication skills through programs like Public Speaking, Morning Speaking, and English Corner. The use of interactive learning media such as digital applications, videos, and games also creates a fun and inclusive learning environment. Thus, the practices carried out by HD reflect the spirit of the *Merdeka* Curriculum, where diagnostic assessment forms the primary basis for designing adaptive and effective learning.

D. Students' perceptions of diagnostic assessment

To support the teachers' perspectives, interviews were conducted with three eighth-grade students to explore their experiences and views on diagnostic assessment in English under the *Merdeka* curriculum. The students were given their initials: Student A, Student B, and Student C.

The first interview was conducted with Student A. Based on the interview, Student A had been studying with the *Merdeka* curriculum since elementary school at the same institution, Al-Fatih School. Student A reported that the English teacher did not give a special test at the beginning of the semester because she knew their English ability from previous interactions.

"Fun fact, my English teacher was my teacher when I was learning English. So, he didn't need to test me."

Student A stated that although there was no formal test, the teacher still recognized their level and designed personalized assignments based on their previous knowledge. The students believed that this understanding helped the teacher modify the learning materials.

"Sometimes my friends will talk to the teacher privately to ask for extra help if they don't understand. I think this is a way to diversify the learning."

According to Student A, the teacher focused more on writing and listening skills in their assignments. Although the student found the initial assignments easy due to her prior knowledge, she found the activities helpful in strengthening her English vocabulary.

"At first, doing the assignments felt natural because I had already used English in my daily life."

The student also noted that her teacher often took pride in her performance and expected a high level of understanding. When asked if the teacher modified her methods based on the diagnostic results, Student A responded that the teacher applied similar strategies to everyone, but sometimes gave individual attention to those who needed more help.

"I don't think the teaching changed much for me, but maybe for others who needed more explanation, the teacher gave extra support."

Student A explained that the initial test or assignment given to her was very easy for her.

"It was very easy because I had already learned most of the lessons they taught me."

When asked about the factors that made the initial assignment easy or difficult, Student A said that he felt it was easier when he could study on his own, while he overcame difficulties by listening to the teacher's explanation.

"If it was easy, I read my book, and if it was difficult, I listened to it from my teacher."

Regarding whether the English learning activities had become more suited to her abilities after the initial test, Student A said that not only did he feel this way, but so did the entire class.

"Not just my ability, but the class as well."

Regarding changes in the teacher's teaching methods after seeing the results of the initial test or assignment, Student A believes that the teacher still teaches in the same way, but with a greater focus on student understanding.

"I don't think so, because our teachers still teach in the same way, and they focus more on our deeper understanding."

When asked whether she felt more motivated or found it easier to understand the English lessons after the initial test, Student A replied that she felt both.

"Actually, both. I'm excited because English is the subject I like best, and it's also easy because I'm used to it."

Student A enjoyed interactive learning activities such as games and quizzes because they helped reveal each student's strengths and weaknesses in English.

The second interview was conducted with Student B, a new eighth grader. Student B admitted that she did not know much about the curriculum, but stated that she had not been formally assessed at the beginning of the semester. Her teacher praised and encouraged her, but there was no mention of a specific diagnostic test.

"He didn't do anything, he just complimented me, that's all."

However, Student B had a high level of English proficiency, which she acquired through informal learning, such as watching YouTube content, and had even won an English Olympiad competition. Student B stated that one of the first assignments was very easy because of her level of understanding compared to other students in the class.

"I don't learn English well. I only learn well after watching YouTube videos."

Student B expressed the feeling that the tests or assignments provided might help the teacher understand her abilities, even though she didn't feel very close to her English teacher.

"Maybe, I'm not very close to my English teacher, lol."

When asked what the teacher did after seeing the test or assignment results at the beginning of the lesson, Student B replied, *"Nothing."* She added that her teacher didn't provide different learning activities that matched the students' abilities. She said, *"No."*

When asked what the teacher assessed from the English assignments she completed,

"I don't know, lol."

She also added that, based on her experience, the teacher never gave her tests or assignments at the beginning of the lesson.

"I didn't get any tests or anything, in my experience."

Regarding whether the teacher had difficulty understanding students' abilities through assignments or test results,

"Maybe, I don't really know."

She also said that although she wasn't confused by the questions or assignments, her friends sometimes had difficulty, so she helped them.

"Not me, but my friends usually have difficulty understanding the questions, so I'm here to be the translator."

Regarding the difficulty level of the initial assignment, Student B revealed,

"One of the first assignments my English teacher gave me was very easy, probably because my skill level was different from my current grade."

She added that this ease was due to a deeper understanding of the material,

"For me, it was easy because I felt like I understood the material on a deeper level thanks to my experience."

However, when asked if the English learning activities had become more suited to her abilities after the initial test, she said, "No,"

She explained that the teachers' teaching methods hadn't changed after seeing the results of the initial tests.

"No, not at all. She treats us all equally, and she hasn't really changed her teaching method."

When asked if she felt more motivated or found it easier to understand the English lessons afterward, Student B said,

"Maybe. I didn't take any tests, as far as I can remember."

When Student B was asked about her favorite English learning activities after the initial assessment, she casually replied,

"I like them all. I'm not kidding."

The third interview was conducted with Student C, who has been studying under the *Merdeka* Curriculum since 2021. Student C stated that a diagnostic assessment was conducted during the first English meeting, focusing on basic language skills. The student expressed her belief that this assessment helped the teacher gain a deeper understanding of the students' abilities.

Student C stated that the tests or assignments provided helped the teacher understand students' abilities.

"Of course, tests like these can help our teacher understand our abilities more deeply,"

"We took a test at the first English meeting. The test was about the basics of English."

Student C explained that the teacher reviewed the results and used them to determine the overall proficiency level of the class. In the next session, the teacher corrected any errors on the test.

"The teacher determined our average ability and corrected our errors in the next lesson."

The student acknowledged that her teacher treated all students equally, but provided additional explanations for those who were having difficulties, to ensure that no one was left out.

"Although we were treated equally, further explanations would be given for those who did not understand."

When asked what the teacher assessed through the English assignments he completed, Student C explained that the assessment was based on the material being taught at the time. She explained,

"She gives assignments based on the material she's explaining at the time. For example, the lesson was about the past tense, so she checks the assignment for the use of verbs related to the past tense, etc. In our writing, she also checks our vocabulary and ensures that our spelling is correct."

Regarding her feelings while completing assignments or tests at the beginning of the lesson, Student C admitted that she was initially confused, but the teacher later explained.

"At first, of course, we were confused about the questions because they were a preliminary test for us, but then they were explained."

When asked if the teacher had difficulty understanding the students' abilities based on the assignments or test results, Student C replied,

"As far as I've seen on stage, I've never seen him have difficulty understanding the students' abilities."

Student C also revealed that she and her friends felt confused about the questions or assignments, but the teacher would provide additional explanations. She said,

"Of course we have them, but our teacher will explain something else if we don't understand it."

Regarding the difficulty level of the initial test or assignment, Student C considered it reasonable.

"I took the initial test given by our teacher because he wanted to know our abilities. Whether it was difficult or not, it was just to see our abilities."

When asked about the factors that make an assignment seem difficult or easy, Student C explained that it depends on the subject being tested. She said,

"One of the factors that sometimes makes it difficult or easy for us to complete the work is the subject itself. It might be because we studied the subject at the previous level, which makes it easier for us, or vice versa."

Student C agreed that diagnostic assessments made a positive contribution to how lessons were delivered later and that the teacher adjusted the material and teaching methods based on the assessment.

"Because our teacher also adapts teaching materials based on the results of our assessments."

Regarding changes in teaching methods after seeing the initial test results, Student C admitted that she didn't know because she hadn't compared them to her previous teaching style.

"I really don't know, because I hadn't seen his teaching style before our class. She probably changed his teaching style depending on the circumstances of the class he was teaching."

Regarding her feelings about the English lessons after the initial assessment, Student C said that the teacher's teaching style made learning more interesting rather than boring.

"The explanations she gives are good and easy to understand, and the diverse teaching methods she uses make learning more interesting rather than boring."

Student C appreciated the clarity of the teaching and the variety of methods, which made learning more interactive. They particularly enjoyed individual assignments and working on their phones, which the teacher provided for learning purposes.

"I enjoy English lessons, especially when the teacher uses interesting methods and lets us use our mobile phones to do our homework."

Based on the results of interviews with three students, it was found that students' perceptions of diagnostic assessments were very diverse. Students A and B, who had higher levels of English, did not notice much change in the teacher's teaching method and found the initial tasks easy. However, they recognized the importance of the teacher understanding students' abilities. Meanwhile, Student C felt the diagnostic assessment provided immediate benefits because the teacher modified the material and provided additional explanations to students who needed them.

In general, all students recognized that diagnostic assessments played a role in developing learning that was better suited to their needs. This assessment helps the teacher identify students' initial abilities, correct errors, and design more effective and engaging learning activities.

From the students' perspectives, different perceptions emerged regarding diagnostic assessment. Students A and B, who had a higher level of English proficiency, considered the assessment a routine part of the learning process. However, they perceived it as useful for teachers to understand each student's abilities. Meanwhile, Student C felt a more tangible impact from the assessment. He stated that after the assessment, the teacher provided additional explanations and used engaging methods, such as tool-based tasks, making learning more enjoyable and relevant to their needs.

This research, conducted by Pujiani et al. (2024), demonstrates that diagnostic assessment plays an important role in identifying learning strategies appropriate to students' characteristics. Teachers in the research stated that diagnostic assessments not only help understand students' academic abilities but also their psychological conditions. This provides a strong foundation for teachers to design more targeted learning.⁶⁶ This similarity is also evident in the practice of teachers at Al-Fatih School, who use assessment results as a basis for enrichment and remediation based on the results of student ability mapping.

This research, also conducted by Rahmawati (2024), also supports this finding. In her research, Rahmawati demonstrated that teachers' positive perceptions of diagnostic assessments encourage more effective implementation of assessments in the classroom. Teachers feel helped in comprehensively understanding students' needs, both cognitively and non-cognitively. The study also confirmed that diagnostic assessments have a direct

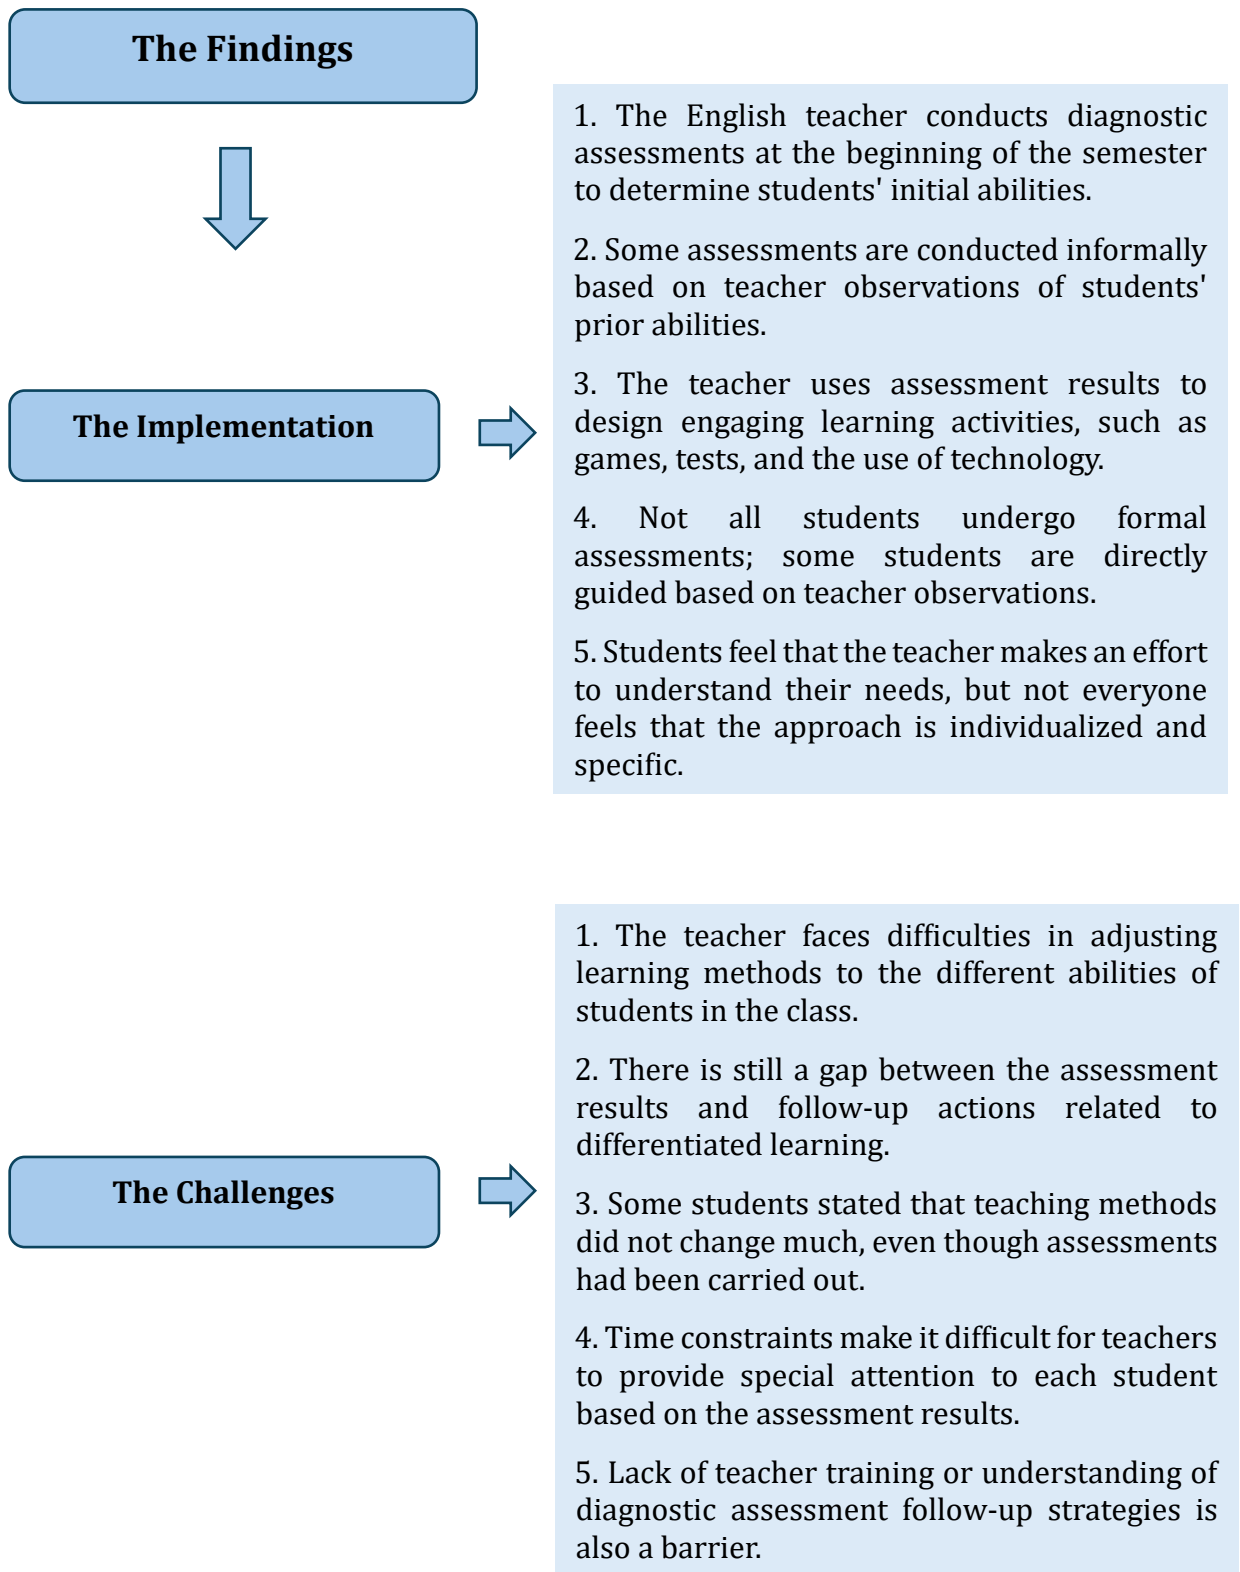

⁶⁶ Pujiani, "Pelaksanaan Asesmen Diagnostik Di Gugus V Kintamani Dalam Pembelajaran Ips" 24, no. 7 (2024): 28–42.

impact on modifying teaching tools and learning strategies.⁶⁷ This is evident in the experiences of the teacher and students at SMP IT Al-Fatih School, where assessment results are used as a basis for designing adaptive learning that aligns with students' needs.

Thus, it can be interpreted that diagnostic assessment not only serves as a tool for mapping students' initial abilities but also plays an important role in increasing learning effectiveness. When assessment results are used optimally, both the teacher and students experience the benefits directly. This aligns with the spirit of the *Merdeka curriculum*, which emphasizes the importance of learning focused on the individual needs of students.

Meanwhile, this Research aims to describe in detail how diagnostic assessment is implemented in English subjects at SMP IT Al-Fatih as part of the implementation of the *Merdeka Curriculum*. The main focus is on three problem formulations, how this assessment is implemented, the challenges faced by the teacher during the implementation of diagnostic assessment, and its impact on the teacher and students. Through interviews with the teacher and three eighth-grade students, important findings were obtained that reflect real-world conditions.

⁶⁷ Rakmawati, "Teachers' Perception And Practices Of Diagnostic Assessment In Implementing Merdeka Curriculum (A Case Study Of English Change Agent Teachers Of Junior High Schools In Grobogan, Central Java)" 09 (2024): 213–23.

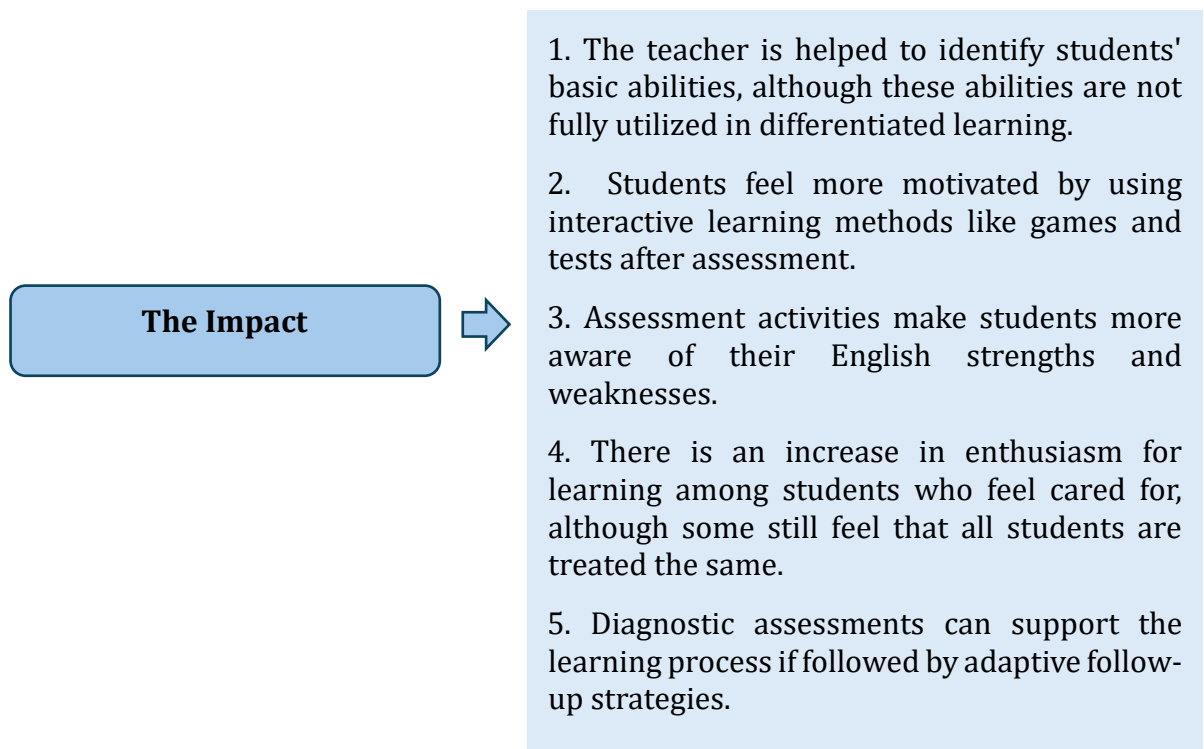

Figure 4.2. Infographic

The results of this research indicate that the teacher has attempted to implement diagnostic assessments at the beginning of learning as an initial step in identifying student abilities. However, there are still challenges in optimally monitoring assessment results, especially related to implementing differentiated learning strategies. In addition, there is a gap between the implementation of assessments and modifications to teaching methods, because some students feel that the teacher still treats them consistently, even though their ability levels vary.

The impact of diagnostic assessments on the teaching and learning process is very significant, especially in increasing student motivation through an interactive and interesting approach. Activities such as tests, games, and the

use of technology help students become more involved in learning. However, to ensure that the impact of this assessment is not limited to administrative issues, the teacher must develop more targeted and personalized follow-up for each student. This is important input for improving the implementation of diagnostic assessments in the context of the *Merdeka* curriculum.

CHAPTER V

CONCLUSIONS AND RECOMMENDATIONS

A. Conclusions

Based on the research findings on students' and teachers' perceptions of diagnostic assessment in English language learning at SMP Al-Fatih School, several key findings can be drawn.

The teacher recognizes the importance of diagnostic assessment for identifying students' initial abilities and adjusting the learning process to suit their needs. Teachers find this assessment useful in designing more targeted materials and supporting students' proficiency more effectively and responsively.

Students' perceptions of diagnostic assessments vary depending on their level of English proficiency. High-ability students, such as Students A and B, viewed these assessments as a routine process with little impact, although they acknowledged the importance of teachers' understanding of students' prior abilities. In contrast, Student C felt he immediately benefited from diagnostic assessment because the teacher modified the material to suit his individual needs, including the use of more engaging methods, such as mobile-based assignments.

All students recognize that diagnostic assessments play an important role in designing learning that best suits their needs. The results of these assessments help teachers determine students' starting points, correct errors, and design more engaging and relevant learning activities.

Overall, these results indicate that diagnostic assessments have a positive impact on improving the teachers' understanding of students' abilities and designing more effective and differentiated learning. Although high-ability students did not experience significant changes, they still recognized the importance of assessment in supporting a more focused and effective learning process. This aligns with the principles of the Merdeka curriculum that emphasizes learning based on students' needs and adaptive learning.

B. Recommendation

Some suggestions can be useful for the teacher, for students, for the school, and for other researchers.

1. For English Teachers

The teacher advised continuing to optimize the implementation of diagnostic assessments as a basis for designing learning that aligns with students' needs and abilities. Additionally, the teacher is expected to manage time effectively so that follow-up actions from assessment results, such as differentiated and remedial learning, can run optimally despite limited class hours. Collaboration among teachers and the utilization of digital learning media can also be strategies to support the implementation of assessments and create more interactive and enjoyable learning.

2. For Students

From the research results, active student involvement has proven to be important in the success of diagnostic assessment. Therefore, students are recommended to be more proactive in participating in learning and open in communicating their learning difficulties to the teacher. This openness will help teachers map students' abilities more accurately. In addition, students with

higher abilities are recommended to be involved as peer tutors to create a collaborative and mutually supportive learning environment.

3. For Other Researchers

This research was conducted within a limited scope, namely in one subject and one school. Therefore, it is recommended for future researchers to broaden the scope of their research by involving more than one school, different educational levels, or wider geographical areas. In addition, a quantitative or mixed-methods approach is also recommended to obtain more comprehensive data and statistically measure the impact of diagnostic assessment on students.

APPENDICES

APPENDICES 1

INTERVIEW INSTRUMENT

This research aims to explore the Diagnostic Assessment of English Subjects Implemented in the *Merdeka Curriculum* of eighth grade at SMP IT Al-Fatih School by providing several questions for specific interviews with the relevant teachers. The instrument for this learning was adapted from Afri Nidah Aniasih's research and uses semi-structured interviews by providing structured questions before the interview is conducted.

For the teacher

Identification of the respondent:

Name : Andi Hardiati M. Pd.

Age : 28

Address : Jalan Jipang Raya

Duration : 26 minutes

Indicators	Questions

A. How is the diagnostic assessment of English subjects implemented in the *Merdeka* Curriculum of eighth grade at SMP IT Al-Fatih school?

1. Since when has the *Merdeka* curriculum been implemented at Al-Fatih school?

(Baik, sejak kapan Kurikulum Merdeka diterapkan di sekolah ini?)

HD: The *Merdeka* Curriculum has been implemented since 2021

(Kurikulum Merdeka mulai diterapkan sejak tahun 2021)

2. How do you implement the *Merdeka* curriculum during the learning process in eighth grade?

(Bagaimana Anda menerapkan Kurikulum Merdeka dalam proses pembelajaran di kelas delapan?)

HD: In the eighth grade, the implementation of the *Merdeka* Curriculum begins with a diagnostic assessment, both cognitively and non-

cognitively. For the cognitive assessment, we analyze learning objectives that are in accordance with the curriculum. After the learning objectives are set, then we give questions to students.

(Di kelas delapan, pelaksanaan Kurikulum Merdeka diawali dengan asesmen diagnostik, baik secara kognitif maupun non-kognitif.

3. How do you conduct the diagnostic assessments that are adjusted to the Merdeka Curriculum?

(Bagaimana Anda melakukan penilaian diagnostik *yang disesuaikan dengan Kurikulum Merdeka?*)

For cognitive assessment, we analyze the learning objectives that are in line with the curriculum. After the learning objectives are set, we then give the students questions. for non-cognitive assessments, we collaborate with the psychology institute from Makassar State University (UNM) to help conduct diagnostic assessments in accordance with the Merdeka Curriculum. (Untuk asesmen kognitif, kami menganalisis tujuan pembelajaran yang sesuai dengan kurikulum. Setelah tujuan pembelajaran ditetapkan, barulah kami memberikan soal-soal kepada siswa. Sedangkan untuk asesmen non-kognitif, kami bekerja sama dengan lembaga psikologi dari Universitas Negeri Makassar (UNM) untuk membantu melakukan asesmen diagnostik yang sesuai dengan Kurikulum Merdeka.)

4. What diagnostic assessment methods do you use to evaluate your students' English skills?

(Metode penilaian diagnostik apa yang Anda gunakan untuk mengevaluasi keterampilan bahasa Inggris siswa Anda?)

HD: At SMP IT Al-Fatih, we use the 2-6-2 method, which is two questions from the previous level, one question from the current material, and two questions from the next level.

(Di SMP IT Al-Fatih, kami menggunakan metode 262, yaitu dua soal dari jenjang sebelumnya, satu soal dari materi saat ini, dan dua soal dari jenjang berikutnya.)

5. How do you conduct the diagnostic assessments that are adjusted to the Merdeka Curriculum?

(Bagaimana Anda menyusun asesmen diagnostik agar sesuai dengan Kurikulum Merdeka?)

HD: Before developing the assessment, we attended training from the school supervisor, including training on the 2-6-2 method. In preparing the questions, we were also monitored to ensure that the questions created were in accordance with the objectives of the assessment.

(Sebelum menyusun asesmen, kami mengikuti pelatihan dari pengawas sekolah, termasuk pelatihan tentang metode 262. Dalam penyusunan soal, kami juga dipantau untuk memastikan bahwa soal-soal yang dibuat sesuai dengan tujuan asesmen.)

6. How do you use the results of a diagnostic assessment to improve your teaching strategies?

(Bagaimana Anda menggunakan hasil asesmen diagnostik untuk meningkatkan strategi pembelajaran?)

HD: After the assessment is analyzed, the results are grouped into three categories:

Do not understand, partially understand, and fully understand.

Students are then divided into groups based on the assessment results. In its application in the classroom, the material and teaching methods are adjusted to the level of student understanding. For example, for students who do not understand the material, we start from basic concepts. For students who already understand some, the level of difficulty of the material is slightly increased. Meanwhile, students who already understand the material completely, in addition to being given additional challenges, are also involved as mentors for their friends who are still having difficulties.

(Setelah asesmen dianalisis, hasilnya dikelompokkan menjadi tiga kategori: tidak paham, paham Sebagian, dan paham sepenuhnya.

Siswa kemudian dibagi ke dalam kelompok berdasarkan hasil asesmen. Dalam penerapannya di kelas, materi dan metode pengajaran disesuaikan dengan tingkat pemahaman siswa. Misalnya, bagi siswa yang belum memahami materi, kami memulainya dari konsep dasar. Untuk siswa yang sudah memahami sebagian, tingkat kesulitan materi sedikit ditingkatkan. Sementara siswa yang sudah memahami materi sepenuhnya, selain

diberikan tantangan tambahan, mereka juga dilibatkan sebagai mentor bagi teman-temannya yang masih kesulitan.)

7. Are there any specific indicators that you use to assess students' achievement in cognitive aspects?

(Apakah ada indikator khusus yang Anda gunakan untuk menilai pencapaian siswa dalam aspek kognitif?)

HD: We use Bloom's taxonomy as an assessment indicator. In English subjects, we apply levels of understanding from C1 to C6, starting from understanding, analyzing, to applying the material. The questions given are also arranged to cover these various levels.

(Kami menggunakan taksonomi Bloom sebagai indikator penilaian. Dalam mata pelajaran bahasa Inggris, kami menerapkan level pemahaman dari C1 hingga C6, mulai dari memahami, menganalisis, hingga menerapkan materi. Soal-soal yang diberikan juga disusun dengan mencakup berbagai level tersebut.)

8. How do you assess students' skills in organizing their assignments or homework?

(Bagaimana Anda menilai keterampilan siswa dalam mengatur tugas atau pekerjaan rumah mereka?)

HD: In English language learning, we usually measure this skill through speaking tasks. For example, students are asked to record their daily activities in English, from waking up to going to bed.

(Dalam pembelajaran bahasa Inggris, keterampilan ini biasanya kami ukur melalui tugas-tugas speaking. Misalnya, siswa diminta untuk merekam kegiatan sehari-hari mereka dalam bahasa Inggris, mulai dari bangun tidur hingga sebelum tidur.)

9. What methods do you use to measure both cognitive and non-cognitive aspects?

(Metode apa yang Anda gunakan untuk mengukur asesmen kognitif dan non-kognitif siswa?)

HD: (Cognitive assessment is conducted through written tests covering four language skills: reading, writing, speaking, and listening. For summative assessment at the end of the semester, we still use written tests as the main measuring tool.)

Asesmen kognitif dilakukan melalui tes tertulis yang mencakup empat keterampilan bahasa: reading, writing, speaking, dan listening. Untuk asesmen sumatif di akhir semester, kami tetap menggunakan tes tertulis sebagai alat ukur utama.

B. What are the challenges faced by teachers in doing diagnostic assessments of English subjects implemented in the *Merdeka Curriculum* of eighth grade at SMP IT al-Fatih school?

1. have you ever experienced difficulties in doing diagnostic assessment results and using them to improve the quality of learning?

(Apakah Anda mengalami kesulitan dalam menganalisis hasil asesmen diagnostik dan menggunakannya untuk meningkatkan mutu pembelajaran?)

HD: Yes, there are some challenges. One of them is the difficulty in determining the right learning media for students with different levels of understanding.

(Ya, ada beberapa tantangan. Salah satunya adalah kesulitan dalam menentukan media pembelajaran yang tepat untuk siswa dengan tingkat pemahaman yang berbeda.)

2. What challenges do you face when doing diagnostic assessment in your English class?

(Tantangan apa yang Anda hadapi saat menerapkan penilaian diagnostik di kelas bahasa Inggris Anda?)

HD: The main challenge is to create questions that are appropriate to the students' backgrounds. Because the 262 method gives teachers the freedom to choose sub-materials from previous levels, teachers must ensure that students have indeed studied the material in elementary school. However, there are students who have not studied English at all in elementary school, so they are really starting from zero.

(Tantangan utamanya adalah menyusun soal yang sesuai dengan latar belakang siswa. Karena metode 262 memberikan kebebasan kepada guru dalam memilih submateri dari jenjang sebelumnya, guru harus memastikan bahwa siswa memang telah mempelajari materi tersebut di tingkat SD. Namun, ada siswa yang sama sekali belum belajar bahasa Inggris di SD, sehingga mereka benar-benar memulai dari nol.)

C. What are the impacts of diagnostic assessment on the teaching and learning process of English subjects implemented in the *Merdeka Curriculum* of eighth grade at SMP IT Al-Fatih school?

1. Are there any impacts during the implementation of diagnostic assessments in the Merdeka Curriculum at SMP IT Al Fatih School?

(Apakah ada dampak selama penerapan asesmen diagnostik dalam Kurikulum Merdeka di SMP IT Al Fatih?)

HD: Actually, the impact is not very visible directly. The learning process continues, especially because here we are not in a hurry to catch up on the material. I mean, if a student has not understood a material, we make sure that he really understands it first before moving on to the next material. (Sebenarnya, dampaknya tidak terlalu terlihat secara langsung. Proses pembelajaran tetap berlanjut, terutama karena di sini kami tidak terburu-

buru dalam mengejar materi. Maksudnya, jika seorang siswa belum memahami suatu materi, kami memastikan bahwa ia benar-benar memahaminya terlebih dahulu sebelum melanjutkan ke materi berikutnya.)

2. How does diagnostic assessment affect the learning strategies you use in teaching English?

(Bagaimana penilaian diagnostik memengaruhi strategi pembelajaran yang Anda gunakan dalam mengajar bahasa Inggris?)

HD: Because there is data that we get from diagnostic assessments, the strategies that I apply are certainly different. Sometimes I use methods that suit the student's preferences, for example, some are more comfortable learning in groups, while others prefer to learn alone. In the learning process, the strategies used can vary—sometimes I divide students into groups, sometimes individually, depending on the material. If I feel the material is quite difficult, I will mix them in groups so they can help each other.

(Karena ada data yang kami peroleh dari asesmen diagnostik, strategi yang saya terapkan tentu berbeda-beda. Terkadang saya menggunakan metode yang sesuai dengan preferensi siswa, misalnya ada yang lebih nyaman belajar dalam kelompok, sementara yang lain lebih suka belajar sendiri. Dalam proses pembelajaran, strategi yang digunakan bisa bervariasi—

kadang saya membagi siswa ke dalam kelompok, kadang secara individu, tergantung pada materinya. Jika saya merasa materinya cukup sulit, saya akan mencampur mereka dalam kelompok agar dapat saling membantu.)

3. How does diagnostic assessment affect students' ability to understand English material?

(Bagaimana assessmen diagnostik memengaruhi kemampuan siswa dalam memahami materi bahasa Inggris?)

HD: Alhamdulillah, the impact is quite significant. With diagnostic assessment, I can find out which materials need to be emphasized, so that student learning outcomes also increase.

(Alhamdulillah, dampaknya cukup signifikan. Dengan asesmen diagnostik, saya dapat mengetahui materi mana yang perlu ditekankan, sehingga hasil belajar siswa pun meningkat.)

A. How is the diagnostic assessment of English subjects implemented in the Merdeka Curriculum of eighth grade at SMP IT Al-Fatih school?

1. Sejak kapan kamu mulai belajar dengan Kurikulum Merdeka di sekolah ini? (Since when did you start studying with the Merdeka Curriculum at this school?)

Siswa A: semenjak SD, karena SD ku dulu adalah Al- fatih, bisa di bilang dari dulu saya belajar kurikulum merdeka (2021).

(Since elementary school, because my elementary school was Al-Fatih, you could say that I have been studying the Merdeka curriculum (2021) since long ago.)

Siswa B: saya sungguh tidak tahu karena saya di sini masih anak baru, jadi saya akan menjawab sesuai dengan kelasku (kelas 8)

(I don't know because I'm a new kid, so I'll just answer the grade I'm in 8th grade)

Siswa C: Sejak 2021. Dari awal masuk al fatih, mereka sudah menerapkan kurikulum merdeka dalam pembelajaran.

(Since 2021. Since the beginning of entering Al Fatih, they have implemented the Merdeka curriculum in learning.)

2. Apa yang guru Bahasa Inggrismu lakukan saat awal semester untuk mengetahui kemampuan Bahasa Inggrismu?

(What does your English teacher do at the beginning of the semester to find out your English ability)

Siswa A: Fun fact, Guru bahasa inggris ku adalah tutor dulu ku pada saat saya melakukan les bahasa inggris ku dulu...dari itu saja Guru ku tidak perlu meng-test saya.

(Fun fact, my English teacher was my tutor when I was taking English lessons...that's why my teacher doesn't need to test me).

Siswa B: beliau tidak melakukan apa pun, hanya memujiku, dan hanya itu saja.

(She didn't do anything, just praised me, and that's it).

Siswa C: Beliau melakukan assesment awal tentang dasar dasar bahasa inggris untuk mengetahui sejauh mana kemampuan kami.

(She conducted an initial assessment of the basics of English to find out the extent of our abilities).

3. Pernahkah kamu mengikuti tes atau tugas khusus di awal pelajaran Bahasa Inggris? Bisa ceritakan seperti apa?

(Have you ever taken a special test or assignment at the beginning of your English lessons? Can you tell us what it was like?)

Siswa A: Menurutku tidak, semenjak Guruku mengetahui sepengetahuanku dalam Bahasa Inggris.

(I don't think so, since my teacher knows my knowledge of English.)

Siswa B: tidak, saya tidak belajar bahasa Inggris belajar dengan benar, saya hanya menonton YouTuber dan saya perlahan-lahan menjadi lebih baik dalam bahasa Inggris dari mereka, tetapi saya pergi ke Olimpiade dan mendapat gold sekitar 2 kali.

(No, I didn't learn English by studying properly, i just watch a YouTuber and I slowly get better at English from them, but I did go to an Olymp and got gold like 2 times.)

Siswa C: Seperti jawaban sebelumnya, kami di beri tes awal dalam pertemuan pertama bahasa inggris untuk mengetahui kemampuan kami. Berisi tentang dasar dasar pada pembelajaran bahasa Inggris.

(As the previous answer, we were given an initial test in the first English meeting to find out our abilities. It contains the basics of learning English.)

4. Apakah kamu merasa tes atau tugas itu membantu guru memahami kemampuanmu?

(Do you feel that tests or assignments help teachers understand your abilities?)

Siswa A: Sebagian iya, karena lebih banyak ilmu lebih bagus.

(Partly yes, because more knowledge is better.)

Siswa B: Mungkin, saya tidak begitu dekat dengan guru bahasa Inggris, hehehe.

(Probably, I'm not really close with my English teacher, hehehe.)

Siswa C: Tentu saja, tes seperti itu dapat membantu guru kami memahami kemampuan kami lebih dalam.

(Of course, such tests can help our teachers understand our abilities more deeply.)

5. Apa yang biasanya dilakukan guru setelah melihat hasil tes atau tugasmu di awal pelajaran?

(What do the teacher usually do after seeing your test results or assignments at the beginning of the lesson?)

Siswa A: biasanya bangga dan sudah diharapkan dari dulu mi. (Usually, she proud and have been expecting it for a long time.

Siswa B: tidak ada (nothing)

Siswa C: Beliau meninjau dan mengambil kemampuan rata rata kami secara keseluruhan. Juga, beliau membenarkan apa yang salah pada hasil test kami pada pertemuan selanjutnya.

(She reviewed and took our overall average ability. Also, she corrected what was wrong with our test results at the next meeting.)

6. Apakah gurumu memberikan kegiatan belajar yang berbeda-beda sesuai kemampuan siswa? Bisa beri contoh?

Siswa A: Menurutku, Iya karena Sebagian dari temanku berbicara private sama guru supaya lebih dia pahami.

(In my opinion, yes, because some of my friends talk privately with the teacher so that they can understand better.)

Siswa B: tidak (no)

Siswa C: Pada kelas kami, beliau memperlakukan semua secara merata. Walau ada diantara kami yg tidak paham, beliau akan menjelaskannya secara terpisah sehingga anak itu tidak akan ketinggalan pemahaman.

(In our class, he treats everyone equally. Even if some of us don't understand, he will explain it separately so that the child won't miss out on understanding.)

7. Menurutmu, apa yang dinilai oleh guru dari tugas-tugas Bahasa Inggris yang kamu kerjakan?

Siswa A: Di antara menulis atau pendengaran kita guru kita lebih focus dalam aspek ini.

(between writing or our listening...our teachers focus more on this aspect.)

Siswa B: Saya tidak tahu hehehe (I don't know hehehe)

Siswa C: Beliau memberikan tugas sesuai materi yg ia terangkan saat itu. Jadi contoh, pembelajaran saat itu tentang past tense, maka yg akan ia cek pada tugas yg ia berikan adalah pemakaian verb, dll. berkaitan dengan past tense, pada penulisan kami, ia juga akan memeriksa vocab kami, pengejaannya sudah benar atau masih salah.

(She gave assignments according to the material he explained at that time. So for example, the learning at that time was about past tense, then what he would check on the assignment she gave was the use of verbs, etc. related to past tense in our writing, she would also check our vocabulary, whether the spelling was correct or still wrong.)

8. Bagaimana perasaanmu saat mengerjakan tugas atau tes dari guru Bahasa Inggris di awal pembelajaran?

Siswa A: Menurutku, Normal karena terbiasa dengan Bahasa Inggris in my daily life.

(In my opinion, it's normal because I'm used to English in my daily life).

Siswa B: Beliau tidak memberiku tes atau apapun, menurut pengalamanku. (she didnt test me out or anything in my experience).

Siswa C: Awalnya, tentu kami mempunyai perasaan bingung pada soalnya karena itu adalah test awal pada kami, tapi setelahnya dijelaskan ji.

(At first, of course we had a feeling of confusion about the questions because it was an initial test for us, but after that it was explained.)

B. What are the challenges faced by teachers in doing diagnostic assessments of English subjects implemented in the Merdeka Curriculum of eighth grade at SMP IT al-Fatih school?

1. Menurutmu, apakah guru Bahasa Inggris pernah kesulitan memahami kemampuan siswa dari hasil tugas atau tes?

(In your opinion, has your English teacher ever had difficulty understanding students' abilities from assignment or test results?)

Siswa A: Menurut saya, tidak karena Guruku tidak perlu khawatir sama saya tapi kalo kita bicara kan teman kelas ku itu beda cerita.

(In my opinion, no, because my teacher doesn't need to worry about me, but it's a different story if we talk about my classmates.)

Siswa B: Mungkin, saya kurang tahu.

(maybe, i don't really know)

Siswa C: Sejauh yang saya liat di depan panggung, saya tak pernah melihat beliau kesusahan dalam memahami kemampuan siswa.

(As far as I have seen her on stage, I have never seen her having difficulty understanding the students' abilities.)

2. Apakah kamu atau temanmu pernah bingung dengan soal atau tugas yang diberikan guru di awal pelajaran Bahasa Inggris?

(Have you or your friends ever been confused by questions or assignments given by the teacher at the beginning of an English lesson?)

Siswa A: Menurut saya tidak, tapi teman ku iya, karena kalo saya bisa handle. Teman ku bisa kalo dikasih pahami.

(I don't think so, but my friend does, because I can handle it. My friend can if he is given an explanation.)

Siswa B: bukan saya, tapi teman saya biasanya kesulitan memahami pertanyaan, jadi saya ada di sana menjadi penerjemah.

(not me, but my friend is usually in trouble understanding the questions, so i was there to be a translator)

Siswa C: Tentu kami pernah, tapi guru kami akan menjelaskan sesuatu kembali jika kami tak paham.

(Of course we did, but our teacher would explain something again if we didn't understand.)

3. Apakah kamu merasa tes atau tugas awalnya terlalu mudah atau terlalu sulit? Kenapa?

(Did you find the test or assignment too easy or too hard at first? Why?)

Siswa A: terlalu mudah, karena sebagian pelajaran yang diajari sudah mi saya pelajari.

(too easy, because I have already learned some of the lessons taught.)

Siswa B: Salah satu tugas pertama yang diberikan guru bahasa Inggris saya sangat mudah bagi saya, mungkin karena tingkat keterampilan saya yang berbeda dengan nilai saya saat ini.

(One of the first assignments that my English teacher gave out was really easy for me, maybe because of my different skill level and current grade I'm in.)

Siswa C: Saya wajarkan untuk tes awal yang diberikan guru kami, karena beliau ingin mengetahui kemampuan kami. Susah atau tidak semuanya hanya untuk mengetahui hingga mana kemampuan kami.

(I think it's fair for the initial test given by our teacher, because she wants to know our abilities. Whether it's difficult or not, it's all just to find out how capable we are.)

4. Apa yang membuatmu sulit atau mudah saat mengerjakan tugas awal dari guru Bahasa Inggris?

Siswa A: kalo mudah, saya membaca buku ku sendiri, kalau sulit, saya dengar dari guruku sendiri.

(If it's easy, I read my own book, if it's difficult, I hear it from my own teacher.)

Siswa B: Bagi saya, mudah karena saya merasa memahami materi pada tingkat yang lebih dalam berkat pengalaman saya.

(For me, it's easy because I feel like I understand the material on a deeper level because of my experience.)

Siswa C: Salah satu faktor yang membuat kami kadang susah atau mudah dalam mengerjakan adalah materi itu sendiri, bisa saja materi itu pada jenjang sebelumnya sudah kami pelajari membuatnya mudah untuk di kerjakan, begitu pula sebaliknya.

(One of the factors that sometimes makes it difficult or easy for us to do something is the material itself. It could be that we have studied the material at a previous level, making it easy to do, and vice versa.)

C. What are the impacts of diagnostic assessment on the teaching and learning process of English subjects implemented in the Merdeka Curriculum of eighth grade at SMP IT Al-Fatih school?

1. Apakah kamu merasa kegiatan belajar Bahasa Inggris jadi lebih sesuai dengan kemampuanmu setelah tes awal?

(Do you feel that your English learning activities are more suited to your abilities after the initial test?)

Siswa A: Tidak untuk kemampuanku saja, tapi satu kelas juga.

(Not just for my abilities, but for the whole class as well.)

Siswa B: Tidak hahaha (no hahaha)

Siswa C: Tentu, karena guru kami menyesuaikan metode juga materi pembelajaran berdasarkan hasil yg diperoleh oleh kami.

(Of course, because our teachers adjust the methods and learning materials based on the results we obtain.)

2. Menurutmu, apakah guru mengubah cara mengajarnya setelah melihat hasil tugas atau tes awal?

(In your opinion, do teachers change their teaching methods after seeing the results of initial assignments or tests?)

Siswa A: Menurutku tidak, karena guru kita tetap mengajari cara yang sama, guru kita lebih focus dengan memahami kita lebih dalam.

(I don't think so, because our teachers still teach in the same way, our teachers focus more on understanding us more deeply.)

Siswa B: tidak, sama sekali tidak, beliau memperlakukan kita semua sama, dan benar-benar tidak mengubah cara mengajarnya.

(No, not at all, she treats us all the same, and didn't change her ways of teaching)

Siswa C: Kurang tahu, karena belum pernah melihat metode beliau dalam mengajari siswa sebelum angkatan kami. Kemungkinan besar beliau mengubah cara ia mengajar sesuai dengan kondisi kelas yg ia ajar.

(I don't know, because I've never seen her method in teaching students before our class. Most likely she changes the way he teaches according to the conditions of the class she teaches.)

3. Apakah kamu merasa lebih semangat atau lebih mudah memahami pelajaran Bahasa Inggris setelah itu? Kenapa?

(Do you feel more enthusiastic or easier to understand English lessons after that? Why?)

Siswa A: Sebenarnya kedua-duanya, saya semangat karena Bahasa Inggris adalah pelajaran yang saya lebih suka dan juga mudah karena terbiasa mi. (Actually, both of them, I am enthusiastic because English is a subject that I like more and it is also easy because I am used to it.)

Siswa B: Mungkin, saya tidak melakukan tes apa pun, yang saya saya ingat. (Perhaps, I didn't do any tests, if I remember.)

Siswa C: Penjelasan yg baik dan gampang dipahami, berbagai metode beliau gunakan dalam mengajar membuat pembelajaran lebih seru dan tidak membosankan.

(Good and easy to understand explanations, he uses various methods in teaching to make learning more exciting and not boring.)

4. Apa kegiatan belajar Bahasa Inggris yang paling kamu sukai setelah asesmen awal? Kenapa kamu suka?

(What English learning activity do you like the most after the initial assessment? Why do you like it?)

Siswa A: kegiatan games atau quiz karena supaya mengetahui dimana kemampuan kita dimana. (games or quiz activities to find out where our abilities are.)

Siswa B: saya suka semua, saya tidak becanda. (I like everything, like really, I'm not joking.)

Siswa C: Pada dasarnya saya suka dengan pembelajaran Bahasa Inggris ditambah dengan guru yang seru, jadi kegiatan apapun saya nikmati. Khususnya tugas individu dan pengerjaan tugas via handphone.

(Basically I like learning English plus having a fun teacher, so I enjoy any activity. Especially individual assignments and doing assignments via mobile phone.)

SOAL ASESMEN DIAGNOSTIK

Mata Pelajaran : Bahasa Inggris
Waktu :
Nama :
Kelas : VIII

Petunjuk Umum:

1. Mulailah dengan berdo'a kepada Allah Subhana Wata'ala
2. Tuliskan nama lengkap anda, pada tempat yang tersedia
3. Kerjakan soal yang paling mudah terlebih dahulu
4. Periksa kembali kerjaan Anda sebelum diserahkan kepada pengawas

Soal!

1. What do you know about Descriptive text?
2. We used Verb 1 + s/es in Simple present tense (T/F)

Mr. and Mrs. Albert Evans

Request the pleasure of your company at their marriage of their daughter Elizabeth Anne to Mr. Michael Ryan Barnett

Saturday, the seventh of June at seven o'clock in the evening

The Hampton's Country Club Richfield, VA

And afterwards a reception in the Grand Ballroom

RSVP by May 22nd

3. What is the purpose of the text?
 - b. To invite the readers to come to a wedding party
 - c. To explain the readers the details of wedding party
 - d. To describe the bride and groom To inform the readers

ANNOUNCEMENT

On celebrating Indonesia Independence day, the school canteen gives out free lunch for all students.

The lunch consists of traditional Indonesian foods and drinks.

Don't miss out and enjoy!

School Headmaster

4. Who is write the announcements?

ANNOUNCEMENT

On celebrating Indonesia Independence day, the school canteen gives out free lunch for all students.

The lunch consists of traditional Indonesian foods and drinks.
Don't miss out and enjoy!

School Headmaster

5. Where do you possibly find this kind of text? It is . . .

To : Daddy

I'm so happy that I've just bought a house in South Carolina. It's near a beautiful beach. My dream came true and my hard work is paid off. I plan to leave the apartment next week.

Kayla :)

6. Kayla feels happy because she

Last week, my parents, sister, brother and I went to the zoo. We went there for recreation. We left at 6.00 a.m. and arrived there at 8.00 a.m. the zoo is about a hundred kilometers from my house.

There were a lot of people watching a giant snake. The snake was there for about watching a giant snake. The snake was there for about a week. It was 9 meters long. I thought it was the biggest snake I had ever seen. After going around and watching various animals, we went home.

7. The writer went to the zoo with her

To: Liz

Sorry honey, I can't keep my promise to go with you to the Mall tonight. I've to meet Mrs. Cathy at 07.00 pm. Please, don't be angry.

Sender

Mom

+625281227990

8. How is Liz's mother feel about her promise?

- a. Guilty
- b. Happy
- c. Confused
- d. Afraid

How to Make Starfruit Punch

Ingredients:

- 250 gr yellow starfruit in slices.
- 100 ml water 2 spoonfuls of vanilla.
- 8 teaspoonfuls of lemonade extract

Procedure:

- Put slices of starfruit and water in the blender. Wait until it's soft. Skim it.
- Add syrup, lemonade extract, and soda water. Stir thoroughly.
- Pour it into the glass and put in the ice cubes.

9. What is the text about?

How to Make Cheesecake

Ingredients:

- 1/2 cup of sugar
- 2 eggs
- 1/2 teaspoon of vanilla
- 2 packages of cream cheese

Directions:

- Beat and blend sugar, cream cheese, and vanilla at medium speed.
- Blend in the eggs, then stir.
- Bake at 35 celsius for 40 minutes or until it is almost set.
- Cool.
- To get the best result, put it in the refrigerator for 3 hours.

Yield: 6 servings

Preparation time: 5 minutes Cooking time: 40 minutes

10. For how many people can the cake be served?

Jawaban	Skor	Tindak Lanjut
A	Paham utuh	Pembelajaran dapat dilanjutkan pada KD berikutnya tentang Hubungan Antarsatuan Baku Panjang, Berat, dan Waktu, serta Data dan Penyajiannya dalam Diagram Gambar di Kelas III.
B	Paham sebagian	Memberikan pembelajaran remedial dengan menekankan pada cara mengukur panjang benda dengan menggunakan alat ukur baku panjang, seperti mistar, meteran, dll.
C	Tidak paham	

Asesmen Diagnostik Kognitif

Contoh kegiatan persiapan & pelaksanaan

1. Buat jadwal pelaksanaan asesmen
2. Identifikasi materi asesmen berdasarkan penyederhanaan kompetensi dasar yang disediakan oleh Kementerian Pendidikan dan Kebudayaan
3. Susun pertanyaan sederhana yang meliputi:
 - 2 pertanyaan sesuai kelasnya, dengan topik capaian pembelajaran baru
 - 6 pertanyaan dengan topik satu kelas di bawah
 - 2 pertanyaan dengan topik dua kelas di bawah

(sesuaikan pertanyaan dengan topik yang menjadi prasyarat untuk bisa mengikuti pembelajaran di jenjang sekarang)

Berikan asesmen untuk semua siswa di kelas, baik yang belajar tatap muka di sekolah maupun yang belajar di rumah

Contoh kegiatan tindak lanjut

1. Lakukan pengolahan hasil asesmen
 - Buat penilaian dengan kategori “Paham utuh”, “Paham sebagian”, dan “Tidak paham”
 - Hitung rata-rata kelas
2. Bagi siswa menjadi tiga kelompok:
 - Siswa dengan nilai rata-rata kelas akan mengikuti pembelajaran dengan ATP sesuai fasenya
 - Siswa dengan nilai di bawah rata-rata mengikuti pembelajaran dengan diberikan pendampingan pada kompetensi yang belum terpenuhi
 - Siswa dengan nilai di atas rata-rata mengikuti pembelajaran dengan pengayaan
3. Lakukan penilaian pembelajaran topik yang sudah diajarkan sebelum memulai topik pembelajaran baru, untuk menyesuaikan pembelajaran sesuai dengan rata-rata kemampuan siswa
4. Ulangi proses diagnosis ini dengan melakukan asesmen formatif (dengan bentuk dan strategi yang variatif), sampai siswa mencapai tingkat kompetensi yang diharapkan

Penting

Guru menyesuaikan aktivitas dan materi belajar di kelas dengan peningkatan rata-rata semua murid di kelas

Pertemuan Kelima

Tujuan Pembelajaran :

- Peserta didik mampu membuat Recount text berdasarkan pengalamannya sendiri.

✓ Pendahuluan

- Melakukan pembukaan dengan salam dan berdoa, lalu memeriksa kehadiran peserta didik.
- Mengaitkan materi/tema/kegiatan pembelajaran yang akan dilakukan dengan pengalaman peserta didik.
- Menyampaikan motivasi yang akan diperoleh dengan mempelajari materi teks *recount*.

✓ Kegiatan Inti

Sintaks pembelajaran melalui pendekatan berdiferensiasi:

✚ Berdasarkan Kemampuan:

- **Kelompok A (mulai berkembang):**
Peserta didik menggunakan template atau panduan kerangka teks untuk menulis *recount text* berdasarkan pengalaman yang telah disepakati bersama. Mereka bisa bekerja secara berkelompok untuk saling membantu.
- **Kelompok B (berkembang):**
Peserta didik menulis *recount text* berdasarkan pengalaman pribadi dengan sedikit bantuan dan panduan. Mereka diharapkan untuk lebih mandiri dalam menulis.
- **Kelompok C (mahir):**
Peserta didik menulis teks yang lebih kompleks dengan peristiwa yang lebih detail dan refleksi yang mendalam, serta mengedit teks secara mandiri. Mereka juga bisa diminta untuk mempresentasikan hasilnya di depan kelas.

✚ Berdasarkan Minat:

- **Kelompok A:** Menceritakan pengalaman liburan.
- **Kelompok B:** Menceritakan pengalaman penting di sekolah.
- **Kelompok C:** Menceritakan pengalaman di kegiatan ekstrakurikuler atau komunitas yang mereka sukai.
- Peserta didik membuat kesimpulan tentang hal-hal yang telah dipelajari terkait materi yang telah diajarkan kemudian peserta didik diberikan kesempatan untuk menanyakan kembali hal-hal yang belum dipahami.

✓ Penutup

- a. Peserta didik merefleksikan kegiatan pembelajaran dan menarik kesimpulan.
- b. Guru menyampaikan materi pembelajaran berikutnya.
- c. Peserta didik menutup pembelajaran dengan membaca doa.

Curriculum Vitae

Nurhumaida Azhar, or they used to call me Maida, is the third child of Ahmad and Kartini. Born in Bonelampe on July 15, 2000. She started her formal education at TK Poleonro in 2005, then continued her education at SDN 247 Padatuo in 2007 and graduated in 2013. Then in 2013, she continued her education at MTs Darul Huffadh and graduated in 2016. Then she continued her education at the Islamic boarding school, namely at MAS Darul Huftadh 77 Kajuara Bone, and graduated in 2019, and continued her service for 2 years at RA Smart Home. After that, she continued her education to a higher level at Universitas Islam Negeri Alauddin Makassar in 2021-2025. In 2025, she successfully completed her thesis entitled "The Diagnostic Assessment of English Subject Implemented in *Merdeka* Curriculum of the Eighth Grade at SMP AL-Fatih School."
