ACKNOWLEDGEMENTS

Bismillahirrahmanirahim

Alhamdulillah rabbil 'alamin, the writer would like to express her confession and gratitude to the Most Perfection, Allah *subhana wata'ala* for the guidance, blessing and mercy in completing her thesis. *Shalawat* and *salam* are always be delivered to the big prophet Muhammad *shallallahu 'alaihi wasallam*, his family and followers till the end of the time.

There were some problems faced by the writer in accomplishing this research. Those problems could not be solved without any helps, motivations, criticisms and guidance from many people. It would be an honor to express the big thanks to Muhammad Nur Akbar Rasyid, M.Pd.,M.Ed.,Ph.D. as the writer's first supervisor all at once as Head of English and Literature Department and to Sardian Maharani Asnur, S.Pd.,M.Pd. as her second supervisor who have made so much times guided, gave correction and advice her during completing this thesis. Her big thanks is also addressed to her examiners, Dr. Hj. Nuri Emmiyati, M.Pd. and Nahdhiyah, S.S.,M.Pd. for all their advices, criticisms, suggestion in proposal seminar to make this thesis better.

The writer's gratitude also goes to the Dean of Adab and Humanity Faculty, Dr. H. Barsihannor, M.Ag, all the lecturers of English and Literature Department and the administration staffs of Adab and Humanity Faculty who have given numbers helps, guidance and very useful knowledge during the years of her study.

Special thanks always addressed to the writers' beloved mother, Mahdalena, S.Pd.SD. and her beloved father, Herling, S.Ag. for all their prayers, supports and eternally affection as the biggest influence in her success and happy life. Thanks to her lovely brother and sister, Syahrul Mubarak, S.Kom. and Rezki Amalia Ramadhani for the happy and colorful life.

Thanks to the 4th semester students of Ag-1 and Ag 2 of English and Literature Department for the kindness and warmth in becoming subject of this research, especially for Muhammad Fadli and Darmilawati who have helped the writer during observation until data collection process, so as her best friend Siti Hajrah for accompanied her in observation and questionnaire process. Big thanks for the kindness and guidance of the related lecturer of the subject where the writer did the observation. Her great thanks to all her friends and all people who have helped the writer in accomplishing this thesis.

In the deepest heart, the writer realizes that her thesis is imperfect and still need suggestions and criticism. Despite of its imperfection, she hopes that this thesis will be useful for the students, the lecturers and the readers in general who need it. May Allah *subhana wata'ala* always bless us in every single thing we do. *Aamiin.*

Makassar, May 2016

CHAPTER I INTRODUCTION

This chapter dealt with background of the research, research questions, objective of the research, significance of the research, and scope of the research.

A. Background

Anxiety is a common feeling that emerges in the first time we do something or once we face a new situation. The same case in learning foreign language process, it is not rare the lecturer asks to give any comment or opinion about the subject that we learn about. Students may feel anxious about the response that they will accept from the lecturer and another student after delivering their opinion.

Anxiety is one of psychological approach concern. Spielberger in Mahmoodzadeh (2012: 467) defined anxiety as the subjective feeling of tension, apprehension, nervousness and worry associated with the arousal of the nervous system. It is also associated with feelings of uneasiness, frustration, self -doubt, apprehension, or worry, and it is related to learning process. Anxiety may be caused by the low self-confidence and low self-esteem so students feel afraid of saying something. They do not give their view about something does not mean they know nothing about it, but some factors make them feel anxious to speak. According to Hashemi and Abbasi (2013: 640), when anxiety is related to learners' second or foreign language learning process it is known as second/foreign language anxiety.

Those anxiety factors block students to express their opinion and prefer to keep silent than speak. Their silence in class also makes the lecturer difficult to assess whether they understand or not about the subject. Indeed, the teacher who does not care about the passive students may decide that they are lack of comprehension about the subject even irresponsible, even though they actually understand better than the active students. In order to cope with their anxiety, some students choose to keep silent, avoid eye contact, even behave as if they are busy looking for the answer by reading book.

Those cases made the writer interested in taking it as a problem to be identified under the title “The Analysis of Anxiety Factors in Delivering Ideas of the 4th Semester Students of English and Literature Department of Alauddin State Islamic University Makassar”. The writer used psychological approach and anxiety factor theory that have been stated by Young (1991) that anxiety is caused by low self-esteem, competitiveness, state (situation-specific) anxiety or personality characteristics, lack of group membership, overt explicit error correction, speaking English in front of the class, little declarative (explicit) knowledge, lack of class preparation, and uneven allocation of turns.

B. Research Question

Based on the background above, the writer formulated research questions, they were:

1. What are the anxiety factors in delivering ideas of the 4th semester students of English and Literature Department of Alauddin State Islamic University Makassar?

2. How do the 4th semester students of English and Literature Department of Alauddin State Islamic University Makassar cope with their anxiety feeling?

C. Objective of the Research

Based on problem statements above the writer aimed to:

1. Find out the anxiety factors in delivering ideas of the 4th semester students of English and Literature Department of Alauddin State Islamic University of Makassar
2. Find out the strategy that the 4th semester students of English and Literature Department of Alauddin State Islamic University Makassar in order to cope with their anxiety feeling.

D. Significance of the Research

By conducting this research, the writer hoped that the students who have high anxiety can cope with those anxiety feelings. The lecturers also are expected to help students to face their anxiety feelings. In further, the writer hoped this thesis would have some significance for the reader in generally and especially for the student who interested in psychology especially in analyzing the anxiety aspect by giving the example how to apply psychological approach in this research. As well as to explain the points of psychological aspect especially the anxiety factors in speaking or delivering idea as the case and the strategy to cope with anxiety. The writer also hoped that it would be useful as a considerable or comparison finding for other researchers who would like to conduct a similar research.

E. Scope of the Research

This research discussed about the anxiety factors in delivering ideas (the case in foreign language learning process) of the 4th semester students of English Literature Department of Alauddin State Islamic University of Makassar especially in one of subject of Ag-1 and Ag-2 class where the students should use full English during discussion along with the strategy that the students use to cope with their anxiety. The writer used anxiety factor theory that have been stated by Young (1991) that anxiety is caused by low self-esteem, competitiveness, state (situation-specific) anxiety or personality characteristics, lack of group membership, overt explicit error correction, speaking English in front of the class, little declarative (explicit) knowledge, lack of class preparation, and uneven allocation of turns in order to analyze their anxiety factors and also the strategy that they use in coping with their anxiety.

CHAPTER II

REVIEW OF RELATED LITERATURE

This chapter dealt with some previous related findings and explanation related to anxiety as the focus of this research and also list of references.

A. Previous Related Findings

Anxiety in delivering ideas is the general problem that happens in foreign language learning process. It caught some people's attention to do research in order to find out what makes students feel anxiety to participate in class discussion or presentation and their strategy in coping with their anxiety feeling.

Zhiping (2013) in his journal under the title *Anxiety of Speaking English in Class Among International Students in A Malaysian University*, he found that Iranians and Algerians students suffer from anxiety mainly in relation to communication apprehension and fear of negative evaluation. They share similar reasons for anxiety such as fear of being in public, shyness, and inaccuracy when speaking. They have common coping strategies as well such as keeping silent, being with friends, avoiding eye contact and doing expressive reaction. In this research he used discourse analysis approach in undertaking this study.

Another researcher who was interested in analyzing anxiety in learning foreign language was Shu-Feng Tseng (2012). In his journal under the title *the Factors Cause Language Anxiety*, he has attempted to investigate the factors that language anxiety can possibly stem from. If Zhiping only focused on class room situation and the students themselves, Tseng also involved out of classroom

factors in the wilder social context that has influence in creating anxiety. He found that the important causes of anxiety among the language learners in the present study appear to be pressure by parents and teachers to get good grades at school in English, conditioning in childhood to believe that English is an extremely difficult language to learn, fear of making mistakes and subsequent punishment or ostracism, fear of foreigners and their behavior, instead the same result as Zhiping including fear of losing face for not being perfect, and lack of confidence in their ability to learn English. Some strategies that help students in reducing their anxiety are making good preparation before class begin, trying to be relax, avoiding sit in the rare of class room, and gaining experience to build confidence.

Chowdhury (2014) in her thesis under the title *Learners' Foreign Language Anxiety: A Tertiary Level Scenario in EFL Class*, she also aimed to find out the learner's foreign language anxiety in tertiary level by using questionnaire to identify the anxiety factors from both teacher's perspective and student's perspective. The results of this study revealed that learners' lack of competence in English language, their competitive attitudes, inadequate background knowledge, role of language teachers, learners' high ambition, social factors like lack of exposure to use the language, uneasiness to communicate with someone from opposite sex and parents' pressure, as same as Zhiping found, are responsible for their anxiety of speaking English. Moreover, the survey results also showed that learners' fear of being laughed at or a feeling of inferiority while speaking with more proficient speakers, test performance anxiety and fear of being prominent. This result is almost similar with the theory of Young that the writer will use to

find out the anxiety factors that befall the participants and make them feel anxiety to deliver their ideas in class. The strategies that can help students to reduce their anxiety are by making friendship, sharing their anxiety feeling, and practicing speak English more.

Asnur (2010) in her thesis under the title *The Anxiety of Students in Business English Internship Report Presentation at Business English Study Program of English and Literature Faculty of State University of Makassar*, some anxiety factors that befall her participants are distinguished in to (a) internal factors include fear of failure, fear of criticism, conflict emotion, speech anxiety, negative experience, fear of losing the thread of material, fear of being stopped, negative thinking, and (b) external factors include condition of presentation room, failing to practice, gender and physical factors. There are also factors namely linguistic factor and non-linguistic factor. Linguistic factors belong to speech anxiety such as grammar, vocabulary, and pronunciation, whereas non-linguistic factors belong to external factors and internal factors except linguistics factors. The ways the participants in making out their anxiety are thinking positively, keep self-confidence, prepare well, and do more practice.

Those previous findings show the same factor causes the learners feel anxious, that is fear of negative responses from others. They do not want if the class laugh at them because of their incorrect answer or bad grammar when they are speaking. Indeed, it is a human being to regard positive response from others after we do something to increase our self-esteem, and also basically everyone does not like receiving negative evaluation. The different anxiety factors of those

four findings emerge because of the different scope of the research. If Tseng in his research involved social background factors and Chowdury taken teacher's perspective about the factors that cause speaking anxiety, in this research the writer only focused on students' perspective and the internal factors of themselves in creating anxious feeling. If the previous findings was conducted in all lesson (except Asnur's research), this research only focused on one of subject where the students should use full English during discussion along with the way the students delivered their ideas include asking questions, giving comment or doing presentation.

B. Theory

Anxiety is a common problem that the learners face in class, partially in foreign language learning process. Almost learners have felt this kind of feeling that hinders the process of learning.

According to Horwitz (1986: 128) discussed foreign language anxiety as "a distinct complex of self-perception, beliefs, feelings, and behaviors related to classroom language learning arising from the uniqueness of the language learning process". MacIntyre and Gardner in Sabrina (2014: 10) added that the language anxiety is the feeling of tension and apprehension that appear when learners use a language. Brown (2000: 150) stated that even though we already know about what anxiety is and most of us have felt anxious in some condition, it is still uneasy to define the term of anxiety. Anxiety is related to feelings of uneasiness, frustration, self-doubt, apprehension, or worry.

By virtue of those previous definition of anxiety, the writer came to conclusion that anxiety is uncomfortable feeling include worry, tension, afraid, doubt because of having low self-confidence and self-esteem or afraid of negative evaluation, and it emerges when someone is about to do something. Some people feel anxious only in the first time or in the beginning, but another people can get anxious in most of circumstances. For instance, a student wants to ask a question to the lecturer about the topic to make sure that he has the right thought. Suddenly he thinks that it necessary to ask. Maybe his classmates laugh at him because it is an easy question. He does not want if his friends deem he is stupid. At that time the anxiety emerges and bothers him to asking a question.

These kinds of feelings such as worry about teacher or classmates' judgment, doubt whether our answer are correct or incorrect, or afraid of negative responses after we speak, and other anxious feelings are the big obstacle in foreign language learning process. This phenomenon drew researcher's attention to do the research in order to identify language anxiety befallen the EFL learners (in the next part the writer explained more about the factors of anxiety especially in delivering ideas in foreign language learning process) and all at once find the way to overcome this obstacles. In this thesis the writer used Young's theory stated that anxiety is caused by low self-esteem, competitiveness, state (situation-specific) anxiety or personality characteristics, lack of group membership, overt explicit error correction, speaking English in front of the class, little declarative (explicit) knowledge, lack of class preparation, and uneven allocation of turns.

C. Types of anxiety and their relation to language learning

The literature on anxiety generally distinguishes three types of anxieties, they are trait anxiety, situation-specific anxiety, and state anxiety.

1. Trait anxiety, as stated by Brown (2000: 151), is a more predisposition to be anxious. In other words, people with trait anxiety are predictably and generally anxious about many things under many circumstances.
2. State anxiety is more momentary. It is experienced in relation to some particular event or act (Brown, 2000: 151).
3. A situation-specific anxiety is similar to trait anxiety in that it is stable over time, but it may not be consistent across situations. Rather, it is subject to change from situation to situation. Public speaking anxiety is an example of situation-specific anxiety. If people have tendency to become anxious almost in every situation, it is called trait anxiety). Riasati (as cited in Sabrina, 2014: 10) similarly defined trait anxiety as character of human psychology which make people anxious in different situations and if people cannot reduce this type of anxiety from them it becomes permanent.

D. The Factors of Anxiety in Delivering Ideas

Young (1991) stated that there some factors of being anxious in learning process. They are:

1. Low Self-esteem

Krashen in Young (1991: 427) suggested that an individual's degree of self-esteem is highly related to language anxiety:

" . . . the more I think about self- esteem, the more impressed I am with its impact. This is what causes anxiety in a lot of people. People with low self-esteem worry about what their peers think; they are concerned with pleasing others. And that I think has to do a great degree with anxiety.

Self-esteem is related to individual believes himself to be capable, significant, successful and worthy in what they are doing.

In other word we can say that the concern of the learners in learning process is getting positive response from their teachers and classmates. They need such that acknowledgment to increase their self-esteem so they can regard himself and show it to others by verbal reports and other overt expressive behavior. The students with high self-esteem will not feel worry about what people say about him. The important thing is he has done his best as well as his belief to himself.

2. Overt explicit error correction and fear of negative evaluation

Harsh manner of correcting student errors is often cited as provoking anxiety. In addition, learners consistently report anxiety over responding incorrectly, being incorrect in front of their peers and looking or sounding 'dumb' (Young, 1991: 429). They sometimes feel doubt to speak and tend to silent rather than receive negative evaluation from teacher because of their fault when speaking. We cannot blame the learners when they prefer to freeze than to express their ideas even though not all teachers do that such negative evaluation, but they always put in mind some cases that they have seen in learning process about how shy when teacher directly

correct other learner's mistakes even less in negative way. It forces them to freeze so they are still on the safe side.

3. State anxiety

State anxiety is the feeling of worry or stress that takes place at a particular moment under a particular circumstance and often accompanies physical signs such as perspiration, sweaty palms, dry mouth, muscle contractions and tension, and increased heart rate. A state anxiety is not stable and is likely to change from moment to moment and from circumstance to circumstance. In this case is restricted in delivering ideas or speaking in foreign language learning process.

4. Afraid of Speaking in Front of class

Anxieties associated with classroom procedures center primarily on having to speak in the target language in front of a group. For example, Koch and Terrell in Young (1991) found that more than one-half of their subjects reported oral presentations in front of the class and oral skits as the most anxiety-producing activities in their Natural Approach classes. Other strong sources of anxiety were oral quizzes and being called on to respond orally in the target language. In addition, Young found that more than sixty-eight percent of her subjects reported feeling more comfortable when they did not have to get in front of the class to speak.

5. Competitiveness

Kayaoğlu (2013) in his study, he found that participants reported that the competition in classroom to be the best students is what makes them

feel anxious. When they are demanded to be the best students, they will do their best. But once they fail to do so, they will feel anxious to do that again because of losing face or getting negative evaluation. An example comes from a female learner (#24) who said, “I cannot produce sentences as well as my peers.” As indicated here, the model is the peer and falling behind the mainstream population creates anxiety. Based on this study, “constant targeting of betterment may put strain on learners’ shoulder”. Zhang and Zhong (2012: 28) also stated that some anxious language learners tend to overly concern about the competence of others and compare their own performance in a self-underrated manner with those of their peers. The students who have anxiety because of competitiveness classroom will always feel that their peers are more proficient in what they study about. So, competitive nature in classroom is an important factor of foreign language anxiety.

6. Lack of Class Preparation

Sometimes the grammar of foreign language will become the factors of feeling anxious. So, when learners get difficulties in grammar, they become anxious. Automatically when they lack of grammar, they will feel hard to speak using foreign language. This trouble may make them anxious to delivering their ideas. It also happens if learners are lack of vocabularies of that foreign language. We can say that the learners will get difficulties and cause the anxious because of they are lack of linguistics items. Particularly, vocabulary is the significant one to speak using foreign

language. Because when they are speaking and stuck in the moment because of they forget a word than they cannot remember other words that have same meaning with it, it will be a big problem drives them to anxiety.

The same case with that, lack of preparation before attending the class is also one of factors that cause anxiety. It will be different between the A learners with good preparation and the B who are not. A may answer all the questions indeed give some additional comments about the lectures because they have engaged the materials as well before the class conduct. It differs with B, they do not have certain knowledge about the materials then it makes them feel doubt to express their idea in front of the class. So we can conclude that lack of preparation has important role in creating anxiety.

7. Testing situation

Foreign language anxiety frequently shows up in testing situations. Students commonly report to counselors that they "know" a certain grammar point but "forget" it during a test or an oral exercise when many grammar points must be remembered and coordinated simultaneously. The problem can also be isolated in persistent "careless" errors in spelling or syntax. The student realizes, usually some time after the test that s/he knew the correct answer but put down the wrong one due to nervousness. If the student realizes s/he is making preventable errors during the test, anxiety and errors may escalate.

8. Little Declarative Knowledge

Practice with item-types also gives learners information about "performance expectations." For example, if a test contains contextual situations, the instructor should give students an example of the way they will be expected to perform, e.g., "On the test, I will ask you to respond to a variety of situations, such as, 'What would you say to the hotel clerk if you wanted to obtain a room for three nights and you wanted to pay half of the bill with your Master-card and the other half with a check?'" (Young, 1991: 434).

9. Lack of Group Membership

Young (1991: 428). he cited that certain psychological phenomena are particular to the foreign language setting, such as the concepts of "group membership" and existential anxiety. Anxiety in the language learning context is wrapped up in the phenomenon he refers to as "club membership." The affective filter is down when students consider themselves as a member of the group.

10. Uneven allocation of turn

Some students will feel more anxious in speaking when they do not know when the lecturer probably points them to answer a question or to give an opinion. This uneven turn situation makes them tense, upset, instead they forget what they supposed to say. The same case with other students who like speaking when they are required to speak, when their answer has prepared for answering that question or giving any comments but not

pointed by lecturer to speak, or in other case they raise their hands hoping they get a chance to deliver their ideas, but the lecturer did not point them, it will cause the students feel reluctant to speak. When they go through this experience many times, it can make them lazy to speak. In a long period of time, they will feel anxious to speak.

After describing some factors that may cause anxiety according to some researchers, the writer conclude that there are many small things which can become students' inhibition in developing their language competence, especially in delivering ideas. The dominant factor is from themselves, such as low self-esteem, fear feelings, lack of preparation and knowledge. The other factors come from the way the teacher in give correction or comment about the mistakes that they have made.

E. Symptoms of Anxiety

As it is cited in his journal, Horwitz (1986) stated that the subjective feelings, psycho-physiological symptoms, and behavioral responses of the anxious foreign language learner are essentially the same as for any specific anxiety. They experience apprehension, worry, even dread. They have difficulty concentrating, become forgetful, sweat, and have palpitations. They exhibit avoidance behavior such as missing class and postponing homework.

Barton et.al in their research (2014) stated that there some common symptoms of anxiety that befall people. There are psychological symptoms and physical symptoms. Some psychological symptoms of anxiety include difficulty concentrating, feelings of trepidation, excessive or irrational fear of a specific

object or situation, and stress. Physical symptoms include fatigue, heart palpitation and trembling. Baldwin et.al (2014) in their journal cited that muscle tension is also physical symptoms of anxiety, whereas a marked, persistent and unreasonable fear of being observed or evaluated negatively by other people, in social or performance situation is the psychological symptoms.

Semiun in Wahyuni (2014) cited that people who feel anxious always feel restless, uncomfortable, nervous, foot moving or tap it to the floor, and get shocked easily when hearing a loud sound. In her research about the correlation between self-confidence and anxiety, she found that when the students have anxiety and causes them being tension, panic, sweaty, they will do something like reading a book as if they are looking for the answer. Other symptoms of anxiety as cited in her journal are quick palpitation, increasing blood pressure, blushing, feel cold and trembling in hand and foot, hard breathing, and body perspiring in whole.

Setiaji (2012) stated that physical symptoms of anxiety disorders can be characterized by blushing, perspiring, trembling, fast palpitation, stomachache problem, queasy, vibrato voice, muscle tension, confusing, diarrhea, and sweaty palms, difficult to say something, and difficult to make eye contact.

Those symptoms of anxiety especially the physical symptoms show that people who feel anxious can be known by those indicators. In this research, the writer used those physical symptoms as the instrument during the observation to help the research to see the students who are possibly indicated anxious feeling.

F. Learners' Negative Strategy in Coping with Anxiety

Based on Zhiping's journal (2013), he found that students have some negative ways to cope with their anxiety, they are:

1. Keeping Silent

The common strategy that learners use when they feel anxious is keeping silent. Feeling unsure to give answer or comment, they will tend to be silent. Feeling doubt whether their opinion is correct or incorrect, they choose to be quite. Fear of negative evaluation they will receive, they tend to say nothing.

2. Avoiding Eye Contact

Sometimes when a teacher asks question, the learners who don't want to be pointed will making themselves busy in doing something, such as writing or looking for something on their bag and they hope the teacher will think if they are busy and don't need to be asked. They do that because they feel anxious to this kind of situation.

3. Expressive Reactions

We speculate that smiling to mask one's true feelings is a characteristic of non-verbal communication and that accordingly such behavior would be an expected response to intense classroom anxiety. The most common expressive reactions cited are smiling or laughing (Zhiping, 2013). So in order to reduce their anxiety, they make situation fun then the class will not think their fault as that need to be given negative evaluation.

Despite of some strategies above, Young (1991) stated that other manifestations of foreign language classroom anxiety include nervous laughter, joking, short answer responses, avoiding activities in class, coming unprepared to class, acting indifferent, cutting class, putting off taking the foreign language until the last year, crouching in the last row, and avoiding having to speak in the foreign language in class.

G. Learners' Positive Strategy in Coping with Anxiety

In his Journal, Tseng (2012: 84-85) stated some strategies to reduce students' anxiety. They are:

1. Examine the thoughts that cause the fear

By aware of what makes us feel fear and afraid will drive us to think positive, to realize that everyone makes mistakes learning a language and that making errors is an integral part of the language learning process. It is also important to realize that perfection is an impossible goal and that is not a requisite for success.

2. Learn how to relax

The more one feel relax, the more anxiety decreased. You may sit comfortably and straight in the classroom seat. Before class or during class, take long, slow breaths, hold it for four or five seconds and release it slowly. Stretch arms and legs for additional muscle relaxation. Exercises turn nervous energy into positive energy through a calming release of chemicals.

3. Know what you want to say

Think through the ideas that you want to express that the vocabulary structures, and intonation that are appropriate to correctly express them. Try to understand deeply the material and do not memorize it, because once you forget some words, you will get stuck.

4. Concentrate on the message rather than on the people

Do not worry about what people may think if you make a mistake in the message you are trying to communicate. Instead concentrate on producing a message to make communication successful

5. Avoid sitting in the rear of the classroom

Gradually move forward to the middle or front of the class. Closer proximately to the person you wish to speak to make speaking easier.

6. Gain experience to build confidence

The more you speak English, the more confidence you will have in speaking easier.

By thinking those strategies in coping anxiety, the writer concluded that all people who feel anxious in speaking, by applying those strategy, by the time flies they will reduce their anxiety even they can speak fluently and say everything that they want to say. They can speak more relax and enjoy in expressing what they are supposed to say.

CHAPTER III

METHODOLOGY OF THE RESEARCH

This chapter dealt with method of the research, subject of the research, instrument of the research, procedures of collecting data and method of analyzing data.

A. Method of The Research

In this research, the writer used mixed method. Based on Creswell (2009: 211), mixed method is a research method that combines between qualitative method and quantitative method to be used together in a research to get more comprehensive, valid, reliable, and objective data. This method use Sequential Explanatory model that characterized by doing data collection and quantitative data analysis in the first phase, and followed by collecting data and analyzing qualitative data in the second stage, and then analyzing data in a whole to take a conclusion from the data analysis.

B. Subject of the Research

The writer used accidental sampling to get participants. As cited by Etikan (2015) 'Accidental samples' is also known by convenience sampling because the elements may be selected in the sample simply as they just happen to be situated. In Sugiyono (2014), "incidental sampling" is used as another term of this sampling. He defined incidental sampling as a technique to get the sample of data incidentally—whoever which incidentally researcher can be taking as the sample as long as they are suitable for being source of the data or participant.

Accidental sampling was used to take subjects of the research depend on the person who accidentally met the criteria as the participants. The participants were the 4th semester students of AG-1 and Ag-2 of English and Literature Department of Alauddin State Islamic University Makassar. In getting the data about the anxiety factors, the writer observed the presenters during two weeks observation by determining that they may have higher anxiety rather than the audiences and also the writer observed the silent audiences, of course by seeing which one look having physical symptoms of anxiety. To have information about the strategy in coping with anxiety, the writer observed the active students and the less active students during observation and interviewed subsequently. In this case, the active students is the students who often asked and answered question, gave feedback, gave comment or addition, whereas the less active students refers to the students who only asked question without any feedback or comment.

During three times observation, the writer got the subjects of the research. There was 10 presenters divided into 3 groups, and 10 audiences consist of active students, less active students and silent students. To answer first problem statement, the writer took the presenters, active students, less active students and silent audiences who always set in the same place during the observation, whereas for the second problem statement was taken from the active and less active audiences, they are participant 1, participant 2, participant 4, participant 6, participant 9, participant 10, participant 11, and participant 12. Look table below to clear up the subject of the research.

Table 1. Participants

Observation	Presenters	Audiences	Active/ less-active/ Silent audiences

C. Instrument of the Research

The writer used questionnaires that include some statements related to anxiety factors to know the anxiety factors that the students felt. The

questionnaire was adapted from Young's questionnaire that contains 35 numbers of questions about anxiety factors. The writer also used interview sheet that contained 9 questions to know the way the active students cope with their anxiety.

In pre-observation, the writer used a table of physical symptoms of anxiety that includes the physical symptoms, as what is cited in chapter II, include (a) blushing, (b) sweaty/perspiring, (c) foot movement, (d) vibrate voice, (e) difficult to say something, (f) trembling, (g) difficult making eye contact, (h) sweaty palms, (i) look confuse, (j) cold palms, (k) doing something as if s/he is busy looking for the answer, (l) hard breathing, and (m) become forgetful, to see the students who probably feel anxious. In order to help the writer in collecting and analyzing the data, the writer used video recorder to record the participants' activities during the observation in one of subjects of Ag-1 and Ag-2 class of the 4th Semester students where the students should use full English during discussion. In interviewing the active and less active students, the writer used voice recorder to avoid missing some information during interview.

D. Procedure of Collecting Data

1. The writer did preliminary observation in one of subject of the 4th semester class of English and Literature Department (in Case Ag-1 and Ag-2 class) where the students should use full English during discussion to know what probably anxiety that occurs in students. Before attending the class, the writer asked for an excuse to the related lecturer.
2. The writer asked for permission to the related lecturer of one of the 4th semester subject where the students should use full English during

discussion (in case Ag-1 and Ag-2 class) to do observation in her class during 3 meetings

3. The writer did observation and wrote down the name of students who show symptoms of anxiety based on physical symptoms table, whether the presenter or the audience and categorize them who is probably anxious and who is not. In order to help the writer in doing observation, the writer asked for permission to the lecturer to use video recorder and recorded the presenters and the audiences as well during learning process.
4. The writer gave the questionnaires to the listed students, whether active students, less active students and also the silent students to be answered. To make sure that the silent students have speaking anxiety, the writer interviewed them. To know the physical symptoms that the writer could not see directly such as heart breath fast, cold palms, sweaty palms, even trembling, the writer has asked directly to the participants. The active students that indicated can cope with their anxiety have been interviewed to know their strategy to cope with their anxiety.

E. Technique of Analyzing Data

The next step after collecting the data is analyzing the data by using sequential explanatory model. Quantitative data analysis is the main method whereas qualitative data analysis described deeper about the quantitative data. The analysis of quantitative data in this research is used to count the score and percentage from participants' answers in questionnaire. The analysis of qualitative data is used to deepen, expand and complete the result gotten from

quantitative data analysis by describing it systematically. This result is used to know what anxiety factors that befallen the students in delivering ideas in one of subject of subject of Ag-1 and Ag-2 class of the 4th semester where the students should use full English during discussion. In order to see the level of participants' anxiety, first, the writer decided the interval scale of each level. Because this questionnaire consisted of 35 questions, so the minimum score is 0 and maximum score is 35. The anxious level would be divided into three level, they are low anxiety, moderate anxiety and high anxiety. To decide the interval and the percentage, the writer used formulas as follow:

$$Interval = \frac{Total\ point}{3}$$

$$P = \frac{fq}{N} \times 100\%$$

Notes:

P = Percentage

fq = Number of frequency

N = Total participants

Table 2. Interval Score of Anxiety Level

Interval Score	Category
0-11	Low
12-23	Moderate
24-35	High

(Adapted from Sugiyono, 2013: 184)

In analyzing their strategy in coping with their anxiety, the writer also analyzed their answer from interviewing them whether their strategy was suitable with the strategies stated by Tseng in chapter II or they had other strategies in coping with it. The next step is described and concluded the result by using qualitative descriptive method.

CHAPTER IV

FINDINGS AND DISCUSSIONS

In this chapter, the writer discussed the findings that have been founded during three times observation and the explanation about those findings. This chapter consists of the anxiety factors befell the participants in delivering ideas during the observation in one of subject of Ag-1 and Ag-2 class where the students should use full English during discussion and their strategy used to face those anxiety.

A. Findings

The result of anxiety factors in this part was gotten from giving questionnaire to the participants and asking them about their feeling to make sure that they really feel anxious to speak, include the physical symptoms of anxiety that the writer could not see directly. The writer also enclosed physical symptoms of anxiety of each participant based on observation in the subsequent explanation. In getting the answer of second research question, the strategy to cope with anxiety, the writer interviewed the active students and the less active students.

1. Students' Anxiety Factors in Delivering Ideas

Trembling, tension, heart beat fast, nervous, and become forgetful are the common feelings experienced by the presenters when they are about to present their presentation, but then those feelings are reduced by the time goes by, so do the audiences who want to ask question or giving additions or comments. For the silent audiences, the reason why they do not say anything during presentation is

varied. Some of them are afraid if the presenters cannot understand what they say because of bad grammar or pronunciation. Some of them are not confident and afraid if the question they asked is out of the material. There are also participants who were not interested in the discussion because of the presenters' uninteresting way in present their material. To see more specific percentage of each factor, it could be seen in appendix 7.

Based on Young (1991) anxiety is created by ten factors, they are (a) Low self-esteem; (b) Over explicit error correct and fear of negative evaluation; (c) State anxiety; (d) Afraid speaking in front of the class; (e) Competitiveness; (f) Lack of class preparation; (g) Testing situation; (h) Little declarative knowledge; (i) Lack of group membership; and (j) uneven allocation of turn. All of these factors are experienced by the participants.

The questionnaire used to identify participants' anxiety level consisted of 35 questions represented the ten anxiety factors dealt with Young's theory. The more participants said yes in the questionnaire, the higher level of anxiety they felt. The table above show that great deal participants were in moderate to high level of anxiety. Based on the result of questionnaire, the lowest point of the participants is 15 points whereas the highest is 31 points out of 35 maximum points. In subsequence of this part, the writer would describe the anxious factors experienced by each participants and also the physical symptoms of anxiety showed during the observation.

a) Low Self-Esteem

During the observation, two of the low-self esteem students expressed their ideas in the discussion whereas most of them were freezing. Based on the questionnaire result, 55% of participants had moderate self esteem, 35% of participants were in low self-esteem level and only 10 percent of participants who have high self-esteem. Participants with low self-esteem are characterized by their unsure feeling toward themselves. In the questionnaire, 4 out of 7 participants answer that they never feel quite sure of themselves when they are speaking in English. 6 out of 7 participants admitted that even though they prepared well for English class, they still feel anxious about that. In case volunteer answer in class during discussion, half of the participants with low self-esteem feel embarrassed to do that even they prefer to be pointed by the lecturer to give answer than by their own willing. Those cases are the things indicated that the participants have low self-esteem that inhibited them to speak in class.

b) Over Explicit Error Correction and Fear of Negative Evaluation.

85% participants answer 'yes' in the questionnaire that state 'I would be more willing speak to volunteer answers in class if I weren't so afraid of saying the wrong thing'. It is a normal thing for being afraid in making mistake. It is because they do not want to receive negative error correction from the lecturer. Once they are being corrected, it may become negative experience for them that make them do not want to speak again next time. Being laughed by classmates is also the factor made them keep silent in class. More than half participants admitted. However, it is commonly befalls the silent participants, but it does not

mean that the active students do not. 3 out of active and less active participants sometimes feel afraid if their friends laughed at them when they made mistake. Wholly, this factors emerge all participants but in different level of fear that could be seen in appendix 6

c) State Anxiety

Studying in the class where the students are obligated to use full English and studying in class where the students are free to use Indonesian language created quite different atmosphere. That is the situation that the students feel during learning in the class that the writer observed. Most of participants who silent in class is in very fear level of state anxiety. They answered that they feel more anxious studying in this class than another class. Beside language factor, educational background of the lecturer also becomes a big influential factor created their fear, as what they reported to the writer. It could be seen in the first day observation that only one participant who speak in the class discussion, whereas in the next observation day, there are many students who asked question and gave comment even do debate. It was because different lecturer in first day and next day observation. That shows that some of them only feel fear in certain situation.

d) Fear of Speaking in Front of the Class

All of silent participants answered that they feel more comfortable in class when they do not have to get in front of the class. Participant 14, for instance, she reported in interview that actually she have learnt about the material well in the night before presentation. However, when she got in front of the class to present

her material, she become nervous, trembling, difficult to make eye contact, even she forget all the material she have learnt. She got blank at the time. It because of she afraid of speaking in front of the class that created higher anxious feeling when speak. participant 8 also admitted that in the beginning of presentation, she felt so nervous and cod palms, but after some minutes, she felt better. It indicated that she feel anxious in speaking in front of the class.

e) Competitiveness

Competitiveness also one of factors created anxiety in delivering ideas, feeling that others are better and more proficient. Participant 14 until participant 19 who categorized as silent students are influenced by this factor that caused them to keep freezing in class. They said that they always think that their classmates are better at English and more proficient in that subject than them. It made them feel inferior to speak in class.

f) Lack of Class Preparation

Large deal of participants admitted that their anxious feeling depend on how well their preparation before attending the class, especially for the presenters, even though Participant 11 did not feel any difference between attending the class prepared than unprepared, it is just the same. Because this class is using full English during discussion, practice speaking English more will help them to face the discussion, as what they admitted on questionnaire. It showed that one of the biggest influential factors is class preparation.

g) Testing Situation

When the lecturer grades the students, there will be certain feeling emerged in students' self. There will be a pressure in speaking English in class. 90% participants answered that they become mess up when they know that the lecturer graded them when they do presentation, ask question or give addition in the discussion. About taking language test, most of them feel easy but the rest of them feel uneasy because of that language that they should use in test.

h) Little Declarative Knowledge

Participant 2 in his interview, he said that the more they know well about what they want to say in discussion, the lower anxious feeling he felt at that time. It showed that his anxious feeling related to his knowledge about related material. The same case with all participants, they said that they feel very relaxed when they have studied a great deal the night before. They are also more willing to speak in class if the material is a current event and interesting. More interesting the topic, more they know about that, it make them more relaxed to speak because they already know about the material or topic well. In opposite, if they do not have enough knowledge about related material, they will not speak. First, because they do not know what they have to speak, as what Participant 20 reported in interview. Second, because they do not know well about the material, it is possible to receive negative evaluation from lecturer or friends when they speak, hence they prefer to be silent.

i) Lack of Group Membership

It is a common feeling when people feel more comfortable speaking in

front of the people they know well. As what participant 4 answer in the questionnaire and in interview that he do not feel shy to speak in front of his classmates because he already has been studying in the same class for 2 years. It is different when he has to speak in front of the people that they do not know well. Participant 6 also reported that she felt as a group of that class where her classmates have known her weakness. So there is no reason to feel shy in speaking in class.

j) Uneven Allocation of Turn

Each student has different personality. There are students who like to speak when the lecturer pointed them, and there are also the students who do not like that way. 9 out of 20 participants prefer to speak by their own willing is because when the lecturer pointed them in a sudden while they do not have any ideas to be delivered, it will be a big problem could created anxious feeling to speak, whereas the rest of them who want to speak after being pointed by the lecturer is because they feel embarrassed and not sure about their answer.

After described the factors created anxiety in delivering ideas of the 4th semester students of English and Literature Department of Alauddin State Islamic University Makassar, the writer concluded that the biggest factor caused their anxiety in speaking is fear of negative evaluation, lack of class preparation and little declarative knowledge. All participants' answers showed that fear of explicit correction and negative evaluation is common factor created their anxiety even thought their level of fear are different, as well as lack of preparation and little

declarative knowledge. Most of participants felt afraid to say a wrong thing that might cause their classmates laugh at them while the others felt uneasy when the lecturer correct their mistake explicitly. The second highest percentage of factors caused anxiety is when the students were in testing situation. Some of them became mess up when they knew that they graded by the lecturer. The percentage could be seen in appendix 8.

2. Participants' Strategies Used to Cope with Anxiety

In this part contains participants' strategies that they used to cope with their anxiety in delivering their ideas in class. It is based on the interview held by the writer to all active students and less active students during 3 times observation in one of subject of Ag-1 and Ag-2 of English and Literature Department of Alauddin State Islamic Makassar semester 4 where the students were obligated to use full English during discussion.

In chapter II, the theory used as pertinent ideas about some strategy could be used cope with anxiety was based from Tseng's suggestions in his journal (2012: 84-85) related to students' anxiety factors. Those strategy cover (a) Examine the thoughts that cause fear; (b) Learn how to relax; (c) Know what you want to say; (d) Concentrate on the message rather than on the people; (e) Avoiding sitting in the rare (backside) of the classroom; and (f) Gain experience to build confidence. By interviewing the active and less active participants about how they alleviate their anxiety in delivering their ideas in class, they reported their own ways that they used to face anxious feeling out of Tseng's strategy, include sitting in frontage, avoiding excessive eye contact and do not do too much

movements. In next explanation, the writer would describe the strategy they used to defeat their anxious feeling based on Tseng's theory, enclose their own strategy.

a) Examine the thoughts that caused Anxiety

By interviewing participant 2, the writer found that this strategy is used by him to alleviate his anxious feeling in speaking. He explained that everyone is different in personality, which means that each student has her/his own factors caused her/his anxiety that might differ from others. So, the first step to face anxious feeling is to know the cause of it and find the suitable way to alleviate it. Because of in the beginning of semester he felt so afraid speaking in class and he knew it caused by his unfamiliar with condition as the student of university where he was demanded to speak much, hence he faced his fear by trying speaking in class and joining some organizations. This strategy made him familiar with speaking. Now, he is one of active students and can speak relaxed in class discussion.

b) Sitting in Frontage

Participant 12 sit in frontage or backside of classroom depended on the situation. When the lecturer's voice is small and difficult to be heard or understand if he sat in the backside, he will move to the frontage. In that case, he argued that speaking in the backside of class will catch lecturer's attention more. He felt more pressured speaking in the backside than frontage, that why he decided sitting in frontage of class. Sitting in frontage is one of the strategies used to alleviate anxious. During observation, participant 15, 16, and 18 always sit in

the same spot, in frontage. Even though they never asked question or gave comment in class, at least, the lecturer can see that they watch the discussion well.

c) Sitting in backside of classroom

In this case participant 6 is one of the active participants who use this strategy to cope with anxiety. She always sat in the middle of the class or in the backside. He shared that by sitting in the middle of class, she will be covered by her classmate in frontage so teacher could not see her. She also felt more relaxed when she expressed her mind in the middle of the class. Not only for participant 6, a great deal of silent students always choose middle and backside seats, such as participant 17, participant 19 and participant 20, they never sat in frontage. Different with participant 12' opinion that sitting in frontage can reduce his anxiety, participant 10 felt that his classmates give more attention to him when he speaks in frontage and automatically he will become the center of attention. This condition will increase his nervous feeling in expressing his ideas.

d) Know What You Want to Say and Make Concept

Participant 4, in his effort to reduce his anxious feeling when he spoke, he did it by knowing well what he wanted to say. It means that he decided the diction he would use, the sentence patters, grammar and the ideas. That is for speaking by using English. In delivering ideas by using Indonesia, he just spoke directly without any concept like that. Same line with participant 4, participant 2 and participant 10 also make such concept in their mind before speaking, but more focus on the thing they wanted to share, not too focus on grammar, as long as what they said is understandable.

If those participants made concept in their mind, participant 6 made a written concept to make her easier to speak and it could help her if she suddenly forget what a key words. In other hands, participant 11 and 12 besides making concept, if they found something new from the presenters during the presentation, they will write it down, so when they have something to ask or share to the audiences and presenters, it will make them easier to do that. By interviewing the less active and active participant, participant 1 and participant 9 did not make any concept, instead only said directly when there are something emerges in their mind.

e) Concentrate to the Message rather than the Audience

Participant 6 and participant 12 in alleviating their anxiety in speaking, they focus on the ideas that they want to share to the audience or the question that they want to ask. Even though it is a normal thing to keep thinking of the response of others such as how if their classmates laugh at them when they made a mistake during speaking, or how if the question is out of the material, and other possible responses, they do not take it as a inhibition to speak.

f) Learn How to Relax

By asking some participants about their own strategy used to reduce anxious feeling in speaking, Participant 6 and participant 10 admitted this strategy. When Participant 10 answered the question from the audience, firstly he smiled and he began with a light thing or something funny that made the audiences burned into laugh, but of course that thing was still related to the material. When the audience felt relaxed so as himself, he begin the arduous

material For example, when he answered question from the audience about misunderstanding between two person from different culture and language, he took himself (from Selayar) and the questioner self (from Bima) as the example for explaining that question. Side dish in Bima is called *uta*. If we translate it to Indonesia, it becomes 'ikan'. If we want to say one of side fish such as chicken, meat, or fish, we have to add *uta* word, for example *uta janga* (chicken), *uta uta* (fish) and so forth. So, when we translated it to Indonesia, *uta janga* becomes 'ikan ayam' and *uta uta* becomes 'ikan-ikan'. With this explanation, he made it fun so that the audiences laugh hearing his explanation. Different from him, participant 6 only force herself to be seem relaxed.

g) Gain Experience to Build Confidence

All of active and less active students do this strategy to reduce their anxious feeling in speaking. Participant 2, after he know that the factor caused his anxious feeling is lack of practice, he always practice speaking in class and join English and non-English organization to increase his confidence in speaking in front of people. Same with him, participant 12 also argued that the anxious feeling only occur in a people who unfamiliar with speaking in front of people. By practice more, it increases their ability in speaking in front of the class. Beside by making oneself familiar with speaking in front of people, some of participants force them self to speak, even only for getting point from lecturer, as what admitted by participant 10. Others participants also admitted that they always say what emerge on their mind directly or if there are something they do not agree with.

h) Stop Imagine Negative Response of Your Friends

Based on the participants' answers during interview, participant 2 and participant 6 used this strategy to face anxious feeling when they want to speak in class. They felt quite sure that their classmates already knew about their weakness and lack by the times they spent together in the same class during 2 years. If their classmates laughed, they believed their laughing is not mocking laugh, but there is something funny made them laugh, and it is not necessary to mind it. By holding this belief, they felt relaxed speaking in class and there is no reason to keep freezing in class when they have something to say.

(i) Avoiding Excessive Eye Contact and Do not Do too much Movements

Avoiding eye contact and decreasing movements during speak is what participant 11 did to fade his anxious feeling in speaking or presenting material in discussion. He argued that, look at someone eye's in speaking can increase nervousness, hence to make himself comfortable in delivering his ideas, he use this strategy. He also suggested that, it is better to do not do many movements during speaking because the concentration will be divided between movements and the message. So, it is important thing to limit the movements during speaking.

Finally, after describing participants' strategy to cope with their anxiety in speaking, the writer summed up that the common strategy they use are making concept before speaking and gain experience to build confidence.

B. Discussions

After describing all about what the writer found by conducting observation, giving questionnaire and doing interview toward the participants as what have stated above, in this part the writer will explain more detail about those findings with enclosing pertinent theories related to anxiety factors and the strategy to cope with anxiety.

1. Participants' Anxiety Factors in Delivering Ideas

By virtue of the findings, participants mostly have all of the ten anxiety factors that had been formulated in to 35 items questionnaire and some question in short interview. In this subdivision, the writer will explain clearly those anxiety factors befall the participants.

a) Low Self-esteem

This self-esteem factor in relation to the students' activeness in class could be seen that the most of active and less active students has moderate level of anxiety level, and 5 out of 7 participants with low self esteem was silent during observation, except they who had presentation at that time. Low self-esteem participants feel embarrassed to volunteer answer because of their unsure feeling toward themselves. They also prefer to work with friends than alone. It proved that self-esteem level placed the important role in making students feel confident to delivering their mind. This self-esteem factor is in line with what Wahyuni (2014: 52), who stated that the students who have enough self-esteem could reduce the anxious feeling befall themselves in doing presentation and speaking in

public. They will do a presentation as a challenge to increase their speaking ability rather than as a scary thing to do.

In other hand of what the writer found during observation, there is one of participants who have low self-esteem but he was active in class asking question or giving comment. Found this difference, the writer did an interview to know what made him could speak in class with his low self-esteem. He reported if he believed that by forcing himself to speak, it can decrease his anxious feeling by the time he speaks, because for him the nervousness only befalls the person who unfamiliar with speaking.

b) Over Explicit Error Correction and Fear of Negative Evaluation

Most of participants are in fear category of fear of negative evaluation level, with 50% of total percentage. Participant 1, 2, 10, and participant 12 are some of them which categorized as active students who always ask question or give comment during observation conducted and participant 11 is less active student who felt inferior because of he is the highest semester in that class, and the rest of the them are the silent students. 30 % participants in very fear category are silent students, except participant 4, whereas the students who only felt little bit fear of negative evaluation is 20%.

Great deal of human being is fear of negative evaluation and does not want to be corrected in front of other people. It is the common factor caused the students do not want to speak in class especially in foreign language class. When the writer made sure it with asking some of silent students, participant 17 and participant 18 admitted it. They felt they are lack in grammar and pronunciation.

Afraid if the question is a silly thing to be asked or out of the material is also the things they afraid of. It was also experienced by the active students. Instead of feeling afraid about others' opinion, they prefer trying to do not care too much about it. They believed that everyone could make mistake especially in learning process because nobody is perfect.

Fear of negative evaluation and correction from classmates or teacher in foreign language class is one of influential factors caused anxious feeling to speak that also was cited by Horwitz (1986: 128). He defined it as apprehension about others' evaluation, avoidance of evaluation situation, and the expectation that the others would evaluate oneself negatively. In line with this factor, Asnur's findings (2010: 94) showed that 5 out of 10 of her total participants admitted that they felt afraid of criticism. Some of them felt fear if they could not answer the question from the lecturer whereas others felt afraid of the judgment they would receive after presentation.

Differ from related findings of some researchers in chapter II, in this research there is one participant who admitted that she is not afraid of receiving negative evaluation from her classmates. It is not a shame thing for being laughed by their friends, as long as she felt sure that what she talk about is not a silly thing.

c) State Anxiety

State anxiety here refers to one of subject of class the writer observed where the students should use full English during discussion. The result of participants state anxiety factors stated that only 20% of total participants who were not anxious about this class, while the rest 45% are anxious and 35% are

very anxious. By asking some of them about their feeling in this class that was taught by a great lecturer with lots of experience studied in abroad, they acknowledged that they felt more tension speaking in this class than other classes.

Based on the observation, not anxious students looked relaxed in class without indication of anxious feeling. While most of the anxious and very anxious level students showed how anxious they are by behaving as they are focus on reading book, in order to avoid eye contact with the lecturer. As what the writer cited in findings, when this class was taught by an assistant, they are looked more relaxed even keep their eyes more on the presenters than their book.

This factor accordance with what Brown (2005: 151) has stated that anxiety is the anxious feeling experienced by people in relation to some particular event or act. It was because everyone has his/her own anxiety source. In this case, the students who had anxious and very anxious level of anxiety, in their questionnaire, they answered that they felt more tension and nervous in full English class than non English class. it showed that specific situation in learning could create anxious feeling.

d) Afraid of Speaking in Front of Class

10 participants who had presentation during observation had been interviewed by the writer to know how they feel when they did presentation. They said that they felt nervous, heart pounding, tension, even trembling in the beginning of the presentation. After some minutes speaking, their anxious feeling reduce little by little until the end of the presentation. Those anxieties can be seen by physical reaction of them. Some of them is trembling in their hand,

vibrate voice, difficulty making eye contact, foot movement and even become forgetful even though they have learnt hard about the material. It showed that speaking in front of the class can be a factor why the students got anxious.

The case above is equal with Tseng's finding on his research (2012: 82) about anxiety factors that found that one of his participants felt nervous when she did a presentation or gave a short talk in front of the class. He also stated that others participants shared the same opinion that speaking in front of the whole class or in public caused anxiety for most of learners. Zhipping (2013: 5) in his research about students' anxiety factors found one of his participants reported that he feel shy and somehow afraid of facing public, while another one admitted that he feel more anxious because he had a presentation to present in public.

In this case, participant 11 even did not feel fear of being in front of the class. It could be shown by his physical appearance during presentation, he looked relaxed, making good eye contact, even though sometimes he did foot movement, but overall seem as usual. After interviewing him, he reported that he take the chance (when he was pointed as a moderator in that day) as a challenge to practice and improve his ability in speaking English.

e) Competitiveness

The result of questionnaire showed that 55% of participants felt that their classmates are more proficient than themselves and only 15% who did not. Beside by virtue of the result of questionnaire, the writer also did an interview to ask the participants about their thought toward their classmates. Participant 4 reported that the reason why sometimes he felt anxious to speak in class is

because of feeling inferior, the feeling that his friends is more competent than himself in that subject. It caused him suddenly feel unnecessary to express what he supposed to. Different with participant 4, participant 2 in his questionnaire showed that he never think he is not better than his classmates, in other words he felt he could do as well as his classmates do, so do participant 10 and participant 12. For the participant in 'Yes' category, during the observation, they always keep silent in class except when they had presentation.

It indicated that competitiveness in class give bigger pressure to the students which block them to speak. As what had found by Zhang, one of influential factor caused the students feel anxious to show up their ability is the thought that their fellows are more proficient in the subject they learn (Zhang, 2012: 28). . It is actually a normal situation if there is competition in class and it is naturally for students eager to be the best one, but when they cannot defeat others' ability and was felt defeated, the anxious to speak next time will be increased.

f) Lack of Class Preparation

Learning foreign language means there will be oral communication in class. Different vocabulary, accent, grammar, and intonation of language source and language target, so that is why deep preparation is necessary. Lack of sufficient vocabulary will make students difficult to speak using target language. Wrong grammar will make students take a long thought process to produce a statement in language target. .

75% of total participants in their questionnaire result showed that their anxious feeling is lower when they came to class with preparation related to the subject. Some participants reported that they do not too brave to speak in class used full English is because of they lack in grammar and pronunciation. Participant 18, for instance, she said that she was afraid if her fellows cannot catch what she meant. Most of presenters who had presentation also shared the same opinion about that. They admitted that they will feel more nervous to present their material when they did not prepare it well before the presentation day. So, the anxious feeling emerged in students' self depended on how maximal the preparation they did. More sufficient their preparation, more low the anxious feeling they felt. In a same line Koyaoglu (2013: 250) summed up in his journal that lack of linguistics knowledge in foreign language class process is one of biggest factor in creating students' anxiety in speaking.

g) Testing Situation

Talking about testing situation factor that caused anxious feeling, the large percentage is in very fear level with 55% of total percentage. Participants who did not feel afraid of testing situation were only 10% while the rest of participants were in little fear and fear level. This factor however made some of participants become mess up even got blank and forgot about what they want to say. Some of them still could speak but not fluently and said the same words repeatedly. Participant 8, for example, when she did a presentation with a lecturer assistant in frontage her, the writer could know how anxious she is by hearing her vibrate voice, difficult to say something, foot movement and sometimes

become forgetful about the material. She reported that she feel sensation of heart pounding in the beginning of the presentation, but it was reduce by the time she speak until the end of the presentation.

Although the result of 10% participants showed that they were not afraid of testing situation, they also admitted that graded by lecturer will give more pressure when they speak, but it does not become an inhibition to blocks them to speak. It only forced them to notice more about grammar and the diction they used. In her thesis, Chowdury (2014: 13) also shared the same findings that anxiety during test is a common problem that mostly students have. The thought of how if they fail in the test, or how if the question that the teacher or audiences ask in presentation is different with what they have learnt are the things made them more anxious even during studying process in the day before the test or presentation held. Then, it will become more anxious in the test or presentation when they suddenly forgot a key word and got stuck at that moment. Asnur (2010: 97), one of her participant reported that he could hear the questions that the examiners asked, but when he was going to answer it, s/he suddenly forgot. He admitted that it might because of he was too nervous.

h) Little Declarative Knowledge

Lack of declarative knowledge related to the material that would be discuss in class is also one of factors led the students to feel anxious in class. The proof could be seen from the questionnaire result that anxious feeling of 90% of participants was depended on their declarative knowledge about the material, especially for the presenters and the students who want to ask question.

Related to this case, the writer has interviewed some participants. Participant 1, for instance, she stated that the more they know well the material, the more low the anxious feeling they felt. As long as she has learnt about what she will present, she will feel more relaxed presenting her material to her classmates. Even though as a normal student she still felt a little bit nervous once she began to deliver the material. So as participant 2, as long as he has sufficient knowledge about the material and sure that what he said will give additional knowledge to the presenters and the audiences, he would express his ideas. It is a same case in testing situation when the students do not know the specific question that they would receive could create anxious feeling. In line with what the writer found, Young (1991: 429) cited that the more unfamiliar and ambiguous the test tasks and formats, the more the learners' anxiety produced. Based on the questionnaire result, all participants except participant 9 and participant 13, answer that they feel very relaxed in class when they have studied a great deal the night before.

i) Lack of Group Membership

There were 55% participants who felt more relaxed speaking when they know the audiences better. When they felt that they are not a part of the audiences, they will feel more nervous to speak. Participant 6 in her interview, she said that she did not feel afraid to express her thought in class because she believed that her classmates are her friends. They already know about her weakness and strength. So there is no reason to be silent in class when she has something to say or to ask. She tried to look brave, even though it could not hide

UNIVERSITAS ISLAM NEGERI
ALAUDDIN
M A K A S S A R

her trembling and nervousness when she spoke. It is also showed by participant 1, 10 and participant 12 that they feel the same with participant 6. Participant 1, for instance, when the writer asked her about how if her classmates laugh at her, she replied gladly with big smile by saying 'I am not afraid if my friends laugh at me.'

It is absolutely right that when we know with whom we speak to, we could guess the potential response we will receive from them. When we know that they are our friends and sure that they will give positive response because we are the same who still learn the same language target, the anxiousness will fade away. As what cited by Krashen in Young (1991: 429) that the effective filter is down when you consider yourself as a member of language target group.

j) Uneven Allocation of Turn

For mostly students, pointed by the lecturer in a sudden is a scary moment. They will be shock, even become anxious if they do not have any ideas to answer the question from the lecturer. The result of uneven allocation factor showed that 11 out of 20 students are anxious when they do not know when their name would be probably mentioned. They also prefer to volunteer answer by themselves than being pointed by the lecturer to do so.

Participant 1, 2, 10, and participant 12 are the active students in class. However, in the result of questionnaire indicated that they feel anxious when they are pointed by the lecturer in a sudden immediately. It was because there will be a certain feeling of fear in that moment. 55% of participants preferred to answer or give comment by their own willing, or if the lecturer always pointed the students to speak, they hope that the lecturer give schedule or inform them some minutes

before they have to speak so they have time to think what they would say. Despite on those participants who do not like to be pointed, the rest 45% participants in their questionnaire answered that they preferred to be called on to give addition or comment rather than to volunteer. It is in line with the Young's findings (1990: 543) that as much 35% of his respondents of university students admitted that they are more willing to speak when the teacher informs them the schedule before.

Based on the 10 factors caused students feel anxious to deliver their ideas in class, the writer summed up that different indicator of each factors made the different anxious of each students. Even though some students have the same points of anxiety, they have different anxious factors. Although some students have the same factor, they have different things or case that created their anxious feeling in speaking. For example, even though participant 10 and participant 12 have the same points of anxiety in total, but they have different level of state anxiety factors, participant 12 felt more fear in the class where the students are obligated to use full English than participant 10 felt. Even if they have the same level in fear of negative evaluation factor, they have different answer in some indicators of that factor. If some participants felt uneasy when the classmates corrected their mistakes when speaking, it means that they do not mind with that correction. Related to the anxiety level, the biggest

By virtue of the anxiety level, there are some differences between factors that create the anxiety of students who have moderate level of anxiety and the students with high anxiety level. All of 9 students who have high anxiety level

felt anxious in testing situation while only 2 students out of 11 total students who have moderate anxiety level felt it. They are getting more anxious when they realize that they are graded by the lecturer or if their name were called. Having low self esteem and feeling fear of negative evaluation and error correction are also the most influential factor that make them anxious in speaking. By seeing the result of questionnaire, only 1 participant in high anxiety level who does not feel anxious speaking in front of the class.

Differ from factors caused anxiety of students with high anxiety level, the most influential factor created anxiety of students in moderate category is lack of group membership factor. 9 students out of 11 students who have moderate anxiety level experienced this factor. In case of declarative knowledge and class preparation factor, that was the same between high anxiety level students and the moderate anxiety level students. The clearer result of each factor based on the participants' answers in questionnaire could be seen in appendix 6.

2. Participants' Strategies Used to Cope with Anxiety

The table below showed the strategy that the participants used to alleviate their anxiety in speaking. In this subdivision the writer will describe each of those strategies.

a) Examine the Thoughts that Caused Anxiety

Every student has his/her own things that made him/her anxious to speak. There are students who deem speaking in front of the class as the scary activity, while the others do not. Some students might feel uneasy in class where the students should use full English, but feel relaxed in other classes. Most of

students might do not like if the lecturer corrected their mistakes directly in front of their fellows and made them shy, in the subsequent of class they do not want to speak any more. By examining what probably cause anxiety and then find out the way facing that factor rather than avoiding, it will alleviate their anxiety.

In order to decrease anxious feeling in oral communication, participant 2 did this strategy. Setiaji (2012: 9) in his paper approved that strategy. He explained some ways can be used to reduce social anxiety. First step is by identifying the most anxious situation or activity. After knowing the cause, step by step begin from a small thing try to do that activity until you feel more relaxed doing that.

b) Sitting in Frontage

As what have been cited in findings, participant 15, participant 16 and participant 18 always sat in frontage. They share same opinion with participant 12 that the lecturer will more keep her eyes on the students in the backside of class. By sitting in frontage, the lecturer could see that they are focus on her or the presenter even though they did not ask question or give comment. About this strategy, Tseng (2012: 85) also cited this strategy that can be used to reduce anxiety in speaking. He suggested that the more we near the person we speak to, for example the lecturer or the presenters, we will speak easier and the anxious will reduce

c) Sitting in the Backside of Classroom

Different person, different feeling, produce different anxiety factors and the way to face the anxiety. Based on the observation and interview, the writer

found that some students were sitting in the same spot in the same subject they learnt. For some students, sitting in the frontage is a scary moment where the lecturer could see every single movement they did directly. For them, that is the way to cope their anxiety during learning in the class where the students should use full English during discussion. Different with Tseng (2012) that suggest to sit in frontage to reduce anxiety when speak, participant 10 preferred to sit in backside. In his opinion, backside of classroom is a place where the classmates will give little attention rather than when he speaks in frontage. That is why sitting in backside is one of his strategies to speak more relaxed in class.

d) Know What You Want to Say and Make Concept before Speaking

This is the common strategy applied by the active and less active students to alleviate their anxiety. There were 75% of them use it in order to make them easier in delivering their ideas. Although they do not write down the concept on a paper, at least they recognize it on their mind about what the supposed to say or ask. Related to this strategy, Tseng (2012: 85) also argued that we need to think through the ideas, vocabulary, structure, and the intonation to represent the ideas appropriately. Out of this theory, participant 1 and 9 admitted that they did not make any concept before speaking. It is because the always directly expressed the thing that they supposed to say without thinking too much. It was also seen that participant 1 always looked difficult to transmit her ideas to the audiences in English, so she spoke in Indonesian language to explain what she meant.

e) Concentrate on Message rather than Audience

Although it is possible to receive negative response from the classmates, they do not care about it too much. As long as what they wanted to say is a helpful idea for the presenters and they felt sure about that idea, they felt having a responsibility to speak. They do not want if what they have known by reading related material just they keep by themselves without sharing it to their fellows. By concentrating more to the message will reduce anxious feeling toward the audiences. It is in line with Tseng's suggestion (2012: 85) to do not worry about what people may think about oneself when s/he make mistake in the message s/he is trying to communicate, instead concentrate on producing a message to make successful communication.

f) Learn How to Relax

Doing oral communication in class such as doing presentation, asking question and giving addition is an activity full of tension and fear. Hence students need a strategy that can make them more relaxed to do that. If the class situation is tense, the student who speaks naturally will become tense. To make him/herself relaxed, it is necessary to make the audience also relaxed first, as what reported by participant 10 that he always smile and insert a funny thing in the beginning of his presentation to make the audience laugh, so the tension of the class will be reduced. Participant 6 also make herself seem as relaxed as she can, although she is still really nervous.

Beside participant 10's argument, Abbasi (2013: 643) in his journal took one of strategies from Mejjias that when the students think how to relax in the

beginning anxiety stimuli emerges, anxiety is reduced in the subsequent oral communication situation. It is similar with the strategy that used by participant 10.

g) Gain Experience to Build Confidence

The active students who always deliver their opinion in class do not mean that they have no anxious feeling. Everyone has his/her own things that s/he anxious about. What the writer found after interviewing the active participants and less active participants is trying even forcing themselves to speak is what they did to face anxious feeling. Participant 12 argued that anxious feeling will only befall students who unfamiliar with speaking in front of class. Participant 6 thought that by forcing yourself to speak and by inculcating that we have an obligation to share what we have learnt, will help you to speak habitually. Participant 1 and participant 9 suggested that what comes to our mind is a thing we have to share to our friends and what we doubt about or what we do not understand must be said instead keep it by our self with a lot of question. In other words, one of strategy to alleviate anxiety is by opening our self to our friends.

Those strategies above they did in order to gain experience to increase self-confidence. One of needs to be brave in delivering ideas is self confidence. In line with what Wahyuni (2014: 55) found on her research, that there is negative coefficient between self-confidence and anxiety in speaking. It means that the higher level of self-confidence, the lower anxious feeling in speaking will occur. So, by more practice speaking in class will build self-confidence.

h) Stop Imagine Negative Response of Your Friends

The negative thoughts about response from classmates when a student want to speak in class is a natural thought. Afraid of being stupid students, being laughed at and other negative thought always emerge in students' mind. It is one of biggest factors created anxiety in speaking. However, after a student speaks in class, that thing is quite infrequently happen in reality. Even though sometimes other students laugh, but it is not because they mock him/her (who speak) but there is something just funny. So, there is no reason to keep thinking about what will happen, as what has been explained by participant 6 in findings. Similar to this finding, Setiaji (2012: 10) also suggested this strategy to his social phobia disorder patients to notice carefully how many times the situation they afraid of have really happened in their life. They might found if what they always anxious about have never happened in the reality, instead just the irrational beliefs. This belief is often thought by the students than make them do not want to speak in class. They always felt afraid how if their classmates laugh at them once they made mistakes. They kept thinking that their fellows will think them stupid when they ask a silly question that they themselves really do not know.

i) Avoiding Excessive Eye Contact and Do not Do too Much Movements

It is true that making eye contact with person we speak to is the factors that could make some people anxious in speaking, but it does not mean avoiding totally instead not intense. In reducing anxious, this strategy is also commonly used by the silent students who do not want to be asked or pointed by the lecturer. By behaving busy reading book in order to avoid lecture's eyes successes did by

them because they are too afraid to speak. As what stated by Zhiping (2013: 6) that students always look down, writing, or checking their bags so the lecturer did not point them to answer question.

What participant 11 did is not to avoid lecturer's command, but to reduce his nervous feeling when speaking. He added, the important thing to be noticed is we do not do many movements. For some people, doing additional movements such as holding pen or doing hands movement is the trick to hide nervousness, but for participant 11, it is something that could mess your concentration up. Hence if he wanted to more focus on the ideas he wanted to say, decreasing movements is the best way.

Those strategies above are the strategy that the participants used to cope with their anxiety. Everyone has his/her own uniqueness. As what always the writer said, each participant has different thing which make him/her anxious in expressing ideas in class. With different personality, they also have different way that they used to alleviate their own anxious factors. However, by virtue of their anxiety level, there is no difference related to the strategy that low anxiety level students and the high anxiety level student use. Forcing themselves to practice speaking in class is the strategy that they used in common. Making concept before speaking also would help them to deliver their ideas fluently, even though most of them only make concept in their mind without writing it down.

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

A. Conclusions

Based on the findings and discussion in previous chapter, the writer concluded:

1. There were some physical symptoms of anxiety showed and admitted by the participants when they presented their presentation, asked question or gave comment during discussion in class. Most of them felt trembling, heart pounding, difficult to say something and did foot movement during they speak. Their voice also vibrated. Some of them could feel their palms became cold even sweaty in the beginning they speak but it became normal by the time passed by. There are also participants admitted that they forgot the material they have learnt once they began to speak. Difficult to make eye contact, blushing, looked confuse, and focused on book as if they looked for the answer are also the physical symptoms that shown by the participants during the observation.
2. The speaking anxiety level of participants is in moderate level to high level. The percentage of students with moderate level of anxiety is at the rate of 55% whereas the high level of anxiety is at the rate of 45%.
3. There were some numbers of factors that created anxiety of the 4th semester students in doing presentation in front of the class, asking question or giving comment in the discussion. The most common factor befell the students are fear of error correction and negative evaluation, lack of class preparation, little

declarative knowledge, testing situation, the thought that their friends are more better, state anxiety and afraid of speaking in front of the class. As much 55% participants who their anxiety was influenced by uneven allocation of turn and lack of group membership and 35% were influenced by their low self-esteem.

4. Students with high anxiety level are mostly influenced by low self-esteem, testing situation, afraid of speaking in front of the class and fear of negative evaluation and error correction, whereas students with moderate anxiety level are mostly influenced by lack of group membership.
5. The strategies that they used to alleviate their anxiety in speaking covers (a) examine the thoughts caused anxiety, (b) sitting in frontage, (c) sitting in the backside of class room, (d) making concept before speaking and knowing what they want to say, (e) concentrate on message rather than audience, (f) learn how to relax, (g) gain experience to build confidence, (h) stop imagine negative response of friends, and (i) avoiding excessive eye contacts and do not do too much movements. There is no dissimilarity strategy used by the students with high anxiety category and the students with moderate anxiety level. The common strategies that they used to alleviate their anxious feeling are gain experience to build confidence and making concept before speaking.

B. Suggestions

Based on the concussion above, the writer conveys some suggestion related to this research, they are:

1. By knowing the physical symptoms of anxiety, the students could be aware of it and use the appropriate strategy to cope with their anxiety.

2. By the physical symptoms of anxiety showed by the students during doing presentation, asking question or giving comment in class, it will be better if the lecturer help them to reduce their tension and nervousness.
3. Seeing that great deal of the students did not speak in class not because of they do not want to speak instead there are anxiety factors inhibited them to speak, the lecturer should pay attention in helping them alleviate their anxiety.
4. Since the most influential factor caused students' anxiety is fear of error correction and negative evaluation, it will be better if the lecturer find a better strategy to correct students' mistakes without making them down.
5. With some strategies that the active students and less active students applied to cope with their anxiety in speaking can be followed by other students so they can express their ideas in class relax.
6. Since gain experience to build confidence such as being brave to speak in class is the prominent strategy to alleviate anxiety, other students who have anxiety in speaking can follow this strategy.
7. For the further research, it is necessary to explore more factors that caused students afraid of peaking in class and the strategy to face those factors.

Appendix 2 Questionnaire

Name :

Reg. Number :

Group :

No. HP :

No.	Questions	Yes	No
1.	I would feel more confident about speaking in class if we practiced speaking more.		
2.	I would feel less self-conscious about speaking in class in front of others if I knew them better.		
3.	I feel very relaxed in class when I have studied a great deal the night before.		
4.	I am less anxious in class when I am not the only person answering a question.		
5.	I think I can speak the foreign language pretty well, but when I know I am being graded, I mess up.		
6.	I would be more willing to volunteer answers in class if I weren't so afraid of saying the wrong thing.		
7.	I enjoy class when we work in pairs.		
8.	I feel more comfortable in class when I don't have to get in front of the class.		
9.	I am more willing to speak in class weren't corrected at all in class.		
10.	I am more willing to speak in class when we discuss current events.		
11.	I would get less upset about my class if we did not have to cover so much material in such a short period of time.		
12.	I enjoy class when we do skits in class.		
13.	I would feel better about speaking in class if the class were smaller.		
14.	I feel comfortable in class when I come to class prepared.		
15.	I am more willing to speak in class when we have a debate schedule.		
16.	I am less anxious in class when I am not the only person answering a question.		
17.	I like going to class when we are going to role play situations.		
18.	I would not be so self-conscious about speaking in class if it were commonly understood that everyone makes mistake, and it were not such a big deal to make a mistakes.		

19.	I prefer to be allowed to volunteer an answer instead of being called on to give an answer.		
20.	I am more willing to participate in class when the topics we discuss are interesting.		
21.	I would be less nervous about taking an oral test in the foreign language if I got more practice in class.		
22.	I enjoy class when I can work with another student.		
23.	I would feel uncomfortable if the lecturer never corrected our mistakes in class.		
24.	I feel uneasy when my fellow students are asked to correct my mistakes in class.		
25.	I never feel quite sure of myself when I am speaking in my foreign language class.		
26.	I tremble when I know that I am going to be called on in language class.		
27.	I keep thinking that the other students are better at languages than I am.		
28.	I don't worry about making mistakes in language class.		
29.	I am usually at ease during the tests in my language class.		
30.	It embarrasses me to volunteer answers in my language class.		
31.	Even if I am well prepared for language class, I feel anxious about it.		
32.	I can feel my heart pounding when I am going to be called on in language class.		
33.	I am afraid that the other students will laugh at me when I speak the foreign language.		
34.	I feel more tense and nervous in my language class than in my other classes.		
35.	I always think that my fellows are more proficient in CCU class.		

Adapted from Young (1990: 543-544)

Appendix 3: Strategy in Coping with Anxiety (Interview sheet)

1. How do you feel when you want to ask question or give comment in class?
2. Do you feel anxious such as afraid, worry, or tension when you want to ask question or speak in class?
3. Do you know what probably create your anxiety?
4. Does sitting in frontage reduce your anxious feeling?
5. About expressing your idea, do you make any concept before speaking? Or do you already know what you supposed to ask or say at that time?
6. When you are about asking question or giving comment, do you think about what probably your classmates think of you?
7. How could you speak relax in class?
8. Do you always practice speaking in front of the class? How often?
9. Do you have your own strategy in coping with your anxiety in speaking

Appendix 4: Result of Observation about Physical Symptoms of Anxiety

Day	No.	Participants' name	Symptoms	Yes	No

Note:

Abbreviation

F : Fear
L : Little

N : Not
V : Very

VF: Very Fear
LF : Little Fear

VNF: Very Not Fear
Mod. : Moderate

P: Participants

Column number of Factors

1. Self-esteem
2. Fear of negative evaluation
3. State anxiety
4. Afraid of speaking in front of the class
5. Competitiveness
6. Lack of class preparation
7. Testing situation
8. Little declarative knowledge
9. Uneven allocation of turn
10. Lack of group membership

Appendix 7: Percentage of Participants' Anxiety Factors

No.	Anxiety Factors	Percentage
1.	Low self-esteem	35%
2.	Over explicit error correction and fear of negative evaluation	100%
3.	State anxiety	80%
4.	Afraid of speaking in front of class	70%
5.	Competitiveness	85%
6.	Lack of class preparation	100%
7.	Testing situation	90%
8.	Little declarative knowledge	100%
9.	Lack of group membership	55%
10.	Uneven allocation of turn	55%

Appendix 8: Participants' Anxiety Level

Interval	Category	Presentation
0-11	Low	0%
12-23	Moderate	55%
24-35	High	45%

Appendix 9: Participants' strategy in coping with anxiety

Strategies	Participants
Examine the thoughts that cause anxiety	2
Sitting in frontage	12
Sitting in the backside of classroom	10
Know what you want to say and Make concept before speaking	2, 4, 6, 10, 11, 12
Concentrate on message rather than audience	6, 12
Learn how to relax	6, 10
Gain experience to build confidence	1, 2, 4, 6, 9, 11, 12
Stop imagine negative response of your friends	2, 6
Avoiding excessive eye contacts and do not do too much movements	11

Appendix 10: The Result of Interview (English version)

Participant 1

How do you feel when you re about to present your presentation in this class? Maybe you feel your heart is pounding or you are trembling, or maybe you just feel as usual.

Yah... When I presented the result of my group or my material, I felt my heart beat fast, cold palms, sometimes sweaty, but by the times went by I felt comfortable with the discussion, because Alhamdulillah when I my group's material, I have prepared it well so I was not afraid or felt unprepared. For me as long as I have learnt the material I presented hence I would not anxious about anything, except if I did not learn it before.

I want to ask you, how is your feeling when you want to ask question?

About my feeling when I want to ask question actually eee as usual, my heart did not beat fast. As long as for me my question is . . .eee... what. . . sure, I mean the question is the thing that proper to be asked, not a silly question.

Where do you always sit? In the middle, backside?

Eee... I am usually sit in ... seldom in frontage, actually in the middle or in the backside.

Why do not you sit in frontage?

First, I am not confident to sit in frontage because I am so tall.

Oh.. Okay, right. Then, when you want to ask question, do you make concept or directly?

Eee.. Not at all but if there are question emerge in my mind, I ask it directly.

Then, do not you ever think that 'my friend will laugh at me if my answer is wrong' or how?

I am not. I am not afraid to be laughed at. He he..

Oh, that's right. Then, you look so relaxed in speaking, how do you make yourself relaxed in speaking?

Eee... The way is actually is more believe in self. First, believe in self, then, eee believe that what we do is not a shame thing. So, yah, like that.

So, how with your friend who felt anxious to speak, what is your suggestion so they can speak freely

Eee.. . It's better if she/he opens her/his self. First, open her/his self, then, eee be brave. She/he must be brave to express what s/he felt, what s/he question about. I think they have to go out from their comfort zone.

Okay, thank you.

Participant 2

How do you feel when you are about to present your presentation in this class? fear, trembling, heart beat fast or how?

Actually I feel a little bit nervous but it is always exiting to be in a discussion and sharing idea or knowledge. So the nervous is getting lower by the time.

Mmm.. I want to ask you, how do you feel when you want to ask question or say your opinion in class?

Most of student of course ... Emm.. it depend on how much I know about the thing that I want to ask.. emm.. Eee.. the point is, more I know the material more I feel relaxed.

Okay.. when do you always sit? In frontage, in the backside?

Commonly in the middle.

Does it influence your anxiety in speaking, or?

No... Because... It's not.

Then, when you want to speak, do you make concept or note taking or how?

Eee... usually not, Yes, directly.

Then, when you speak, do you ever think that 'my friends will laugh at me' or something like that?

Mmmm.. in .. only in the early semester maybe but the more experience, the thought like that fade away.

Ohhh.. Do you always practice your speaking in class?

Yes. If not in class, usually in outside such as organizations.

Ohh.. you are active in organization. Then, for you yourself, how can you speak and delivering your ideas in class relaxed?

Mmm.. For me actually it is the influence from ourselves. Even though most of people think that it is from outside factor but actually it is from ourselves. Because we ourselves that make the thought that eee if I speak my friends must laugh at me, afraid of making mistakes, actually from ourselves. Examine what your problem first, because each person has different problem, maybe they are afraid because the fear if we laugh,. One person is mousy. So examine our problem and how we find out the way to solve this problem because it is not factor from outside but inside.

Okay. That is your strategy to cope with your anxiety.. Okay... do you have another strategy?

I don't. That's all.

Okay, that's all what I want to ask. Thank you.

Participant 3

What do you feel when you are pointed to be a moderator in this class presentation? Maybe fear or tremble, or maybe just as usual?

I felt trembling or nervous when I start the discussion but by the time went away I felt more relaxed than in the beginning.

Don't your palms become cold?

Yes, in the beginning.

Participant 4

What do you feel when you want to ask question in class?

Afraid, nervous and heart beat fast and sometimes my palms become cold.

When you are afraid to speak, what probably cause your fear?

Why I did not speak before?

Hmm.. yes... Eee... I mean for example if you want to speak but suddenly you feel fear, what probably make you anxious?

More feel inferior, maybe.

Feel inferior with your friends?

Yes.

Because? Because of grammar maybe.

Not. The thought that always think my friends are better.

Ohh like that, then, where do you like to sit? In the frontage, backside, middle? or wherever?

If I myself like sitting with men.

But in frontage?

No. The men usually sit in the backside.

Why in the backside?

Eee because yah.. It is comfortable in the backside.

Is there any influence to speak between sitting in the frontage and backside?

Nothing

Then, when you want to speak, do you make not taking or, accidentally?

Yes. Accidentally

Then mmmm.. when you want to speak, do you think of your friends' opinion, maybe they will mock you or how?

Sometimes but if I am sure with my answer, I do not think it too much.

Ohhh... then, I see you look relaxed, but just.. when I say you speak yesterday, you look difficult to express it.

Yes it is because limited by vocabulary.

Mmm... but still relaxed, right?

Yes...

How do you make yourself relaxed?

Eee.. How the way is nothing certain practice, because we have study in university for some years.

Hmmm.. you always practice your English?

Yes with my friends.

Okay, then, for you yourself from your experience, eee what probably the strategy can be used so we can expressed our ideas well and not shy to speak?

Emmm.. Experience?

Yes.. or your own strategy you used.

It is easy. First, think what you want to say. Then, arrange the word, if in English, decide the diction we want to use. If you use Indonesia, just speak.

It means you make any concept before you speak?

Yes, but not write it down.

Okay. Thank you very much for your time.

Participant 5

How was your feeling when you want to present your presentation in this class? For example your heart neat fast, trembling, or so forth, or relaxed as usual?

My feeling, in the beginning actually I am nervous but by the time passed by I feel better and I enjoy my discussion. So, there are two or three questions but I am sure I can answer the question and I can do it.

Participant 6

Well, like this. During the observation I saw you asked question so I take you as my sample. So, I want to ask you, how is your feeling when you want to ask question?

In the beginning, emmm... when I want to ask question, of course my heart beat fast but . . . heart pounding . . . first I don't know what to ask because I don't understand the material because the explanation of the presenter that so simple.

After I read the book, my book, actually the material seems like there is a ... what is the material about yesterday? (asked to her friends) about the same culture then there is also the obstacle between different culture, but.... There are already obstacle between different culture but the same is nothing, so I asked about the obstacle in same culture.

You said that you felt your heart beat fast, so what actually make you feel like that?

What make me feel like that is first the assistant lecturer at that time and the lecturer, then, feel shy because maybe I ask a wring thing, use the wrong English, wrong grammar, structure, like that, and also feel shy if the question is a silly question, or my friends will laugh at me.

Ohh... and now do you feel tremble?

Yes, but it is because I have just arrived and because I think I am late.

Okay, then, where do you like to sit? In frontage, backside, middle?
In the middle.

Why?

Because not very.. what is it.. not too conspicuous for the lecturer so I sit in the middle.

When you ask in frontage, in the middle or backside, does it influence you when you want to ask question?

It doesn't have influence.

When you want to speak, do you make concept or directly speaking?

Firstly I make concept but sometimes out of concept because when speak it sometimes out of concept or get other ideas.

Do you ever think that 'my friend will laugh at me', how do you face that feeling?

Eeee.. I ever think that but... but for facing that yah just be confidence as if show that you don't anxious even thought actually yes.

Then, do you always ask question in class?

Yes Alhamdulillah

Maybe that's one of way to reduce your nervous, right? For you yourself, how do you overcome the nervousness?

To overcome the nervousness, yah, how... yah.. we have studied the material well so because feel knowing the material well so I feel I have responsibility to share it to my friend even thought how they response later, it is their business. The important thing is expressing all ideas if finally they laugh, yah, it is okay. I also deem my friends as my friends, they have already know my weakness.

Have other strategies?

No.

Thank you then...

Participant 7

How is your feeling when you want to do presentation in this class? Do you tremble or afraid? Or maybe relaxed as usual?

Some days before presentation I already felt nervous, maybe because lack of preparation. So I studied with all my heart, but my nervousness doesn't went away, maybe because of I felt afraid doing something wrong in presentation. When I got in front of the class to do presentation, I felt very nervous, but when I started to speak, the nervousness is disappear. So, my nervousness only appeared in the beginning of presentation. After some minutes, Alhamdulillah I felt relaxed.

Do your palms feel cold?

No.. it is not cold

Participant 8

How is your feeling when you want to do presentation in this class? do you feel your heart beat fast or fear?

I felt very nervous. Because why? I felt there is something missed in myself, bt when I already got in front of the class for some minutes, the nervousness disappeared.

Do you feel your palms cold?

Yes, in the beginning. But by the times went by, it is not cold anymore.

Participant 9

How when you want to ask question?

Firstly I am thinking of what I want to ask because I don't know what to ask.

Tremble or not?

Tremble.

Do you make concept before asking?

Yes

Written?

No. What I want to say, I just say it.

Where do you always sit?

In the middle

Does it influence your nervousness?

Yes, it does.

It is more nervous in frontage, right?

Yes.

Then, emm.. Do you ever think that 'my friends will laugh at me'?

Yes.

How do you overcome that thought?

Hmm.. just ask what I want to ask. It is better than what we want to ask just we hide in my own mind.

Ohh, just asking. Then, in other classes, do you always ask question also?

Not, seldom..

Then, maybe there some of your friend want to ask question but they are afraid, so what strategy that you suggest to for them?

My friends actually always say if there something they doubt about.

So, what is your own strategy so you are not afraid to speak? for example maybe you always practice speaking, or for example you think 'I have to speak or I don't get point from my lecturer'.

Hehe.. I don't. Just ask or I will feel regret finally if I don't ask about that until the end of the subject.

Okay. That's all. Thank you.

Participant 10

I want to ask you, how is your feeling when you want to ask question or express your opinion?

Nervous, afraid if I am wrong, afraid if my friends laugh at me if I make mistake,

Why do you feel so?

Because doing mistake is not a taboo thing. If you made mistake automatically become something to be laughed. So, if you want, be a perfect one. But you know there is no one perfect.

Then, eee... in class, where do you like to sit? In the backside in frontage, , or middle?

Eeee... Sometimes if I want to get attention I sit in frontage, but if I am not mood I sit in the backside.

Does it influence your nervousness or your anxiety in speaking?

Yes.

What is that?

Because in the backside maybe little... eee.. little.. not too anxious, different with in frontage, become something to be noticed.

When you want to ask question, do you make concept or directly speaking?

Yah, sometimes make concept but just in my mind. It is different with the others maybe who make concept first maybe because their level of anxiety is higher than me.

You looked relaxed in speaking? Or maybe you looked just relaxed from outside?

Yah, inside. But not too anxious. But maybe because I felt habitually with my friends, different if speak in front of a big population, with more people, that big population is the stranger.

Then, do you always practice your speaking?

Yes

In class? With whom?

With my friend, Sxxxxx.

Ohh.. With your friend. Do you always ask question in class?

Yes of course.

Then for you yourself, what is your strategy so that you can speak well and express your mind and without nervous?

Yah, first, that is, make yourself felt comfort. As when last week I did presentation, I start with a light thing, with a joke, for example. When.. When others laughed, at least laugh at myself, not awkward, not tense, then I begin the real material.

Is there any other strategy? Maybe for your friends who still feel afraid to ask question.

Be confidence. Yah, just believe, 'I am gonna get in', 'I sure I can.'

Any else?

Believe in yourself. Believe that there is a certain skill that you good at, the things that you different with others.

Then, to disappear the feeling like 'Mmm I don't need to speak, my friends would laugh at me', how do you face feeling like that?

Aaa... If like that, I force myself even though I don't want, but I should speak. What can I do? For example in class, I am bored, I don't want to speak. But what can I get f I only keep silent? Okay.. okay.. For getting point, I have to speak. So I force myself to speak.

Participant 11

Like this, yesterday in presentation, eee in discussion you also spoke, so I want to ask you, how do you feel actually when you want to ask question or give comment?

I myself still nervous.

Why?

First, about my English, my grammar. The second is like that, become attention because I am regular students.

I also notice that you always sit in the backside? Does it influence your nervousness in speaking?

Not. Actually I like sitting n the backside since long ago.

Hmm.. So t doesn't have any influence.

Yes, sitting in frontage or in the backside is just the same.

Emm.. then, when you want to ask question, do you make concept or directly?

Yes I make such as not taking, the problem that they discuss about.

Do you ever think that 'if I speak, my friend will think of me negatively'?

Yes, ever.. ever.. sometimes I feel like that. I am afraid if my friends say that I am wise guy, but if the discussion become complicated, I will speak.

How can you speak relaxed in class? or you don't have any strategy?

Knowing well what we want to say.

Ohh like that. Do you join organization actively?

Yes

Always speak in public?

Yes.

Emm.. Yah, most of people are anxiety to speak, so do you have strategy so that we don't feel anxious to speak?

First, keeping your eyes on the presentation and making note-taking to make you easier if you want to ask question or give comment, then, avoiding excessive eye contact. It does not mean that you do not focus on the listeners. Of course you have to look at their eyes but not intensely. Do not make so much movement during expressing your thought so that you can focus on speaking.

Okay, that's all. Thank you.

Participant 12

How is your feeling when you want to express your ideas in forum?

Thanks for the question. So, for me, when we speak in class or in beginning of learning process, actually I really like it. Because basically I like discussion and solve a problem, and with that discussion we know others' opinion that different with ours.

Don't you have feeling such as 'I am afraid, trembling' such as that?

Absolutely there is. Everyone when speaks in front of the people because eee... unfamiliar, it must be there is nervousness and so forth. But eee.. it depends on people's personality. When s/he could what.. reduce the nervousness s/he felt, actually when speaking in public, it is n easy thing when s/he try.

Then, in class, where do you like to sit? In frontage, in the backside, or wherever?

Actually I...eee... Sitting wherever is just the same, in frontage, middle or in the backside. It depend on the situation, if the lecturer, her voice, her voice maybe small, it is better to sit in frontage. Maybe in the backside, we are free to what... To do adaptation in class.

Does it influence your anxious?

Yes, it has influence.

What is that?

Yah, the influence is maybe from lecturer's point of view. The lecturer looks at us when we speak, but not at all. When we are noticed, we are lean that what we say must be correct. Because when we do something wrong, other people will laugh at us. Commonly the people speak in front in public think like that.

So, when that thought appears, does it make you think 'it is necessary to speak, my friend will laugh at me'?

Yah, of course.

So how you overcome such feeling?

Yah, actually, I for.. what is it.. for overcoming such problem, think that 'ahhhh... my friend will laugh at me when I am wrong'. But I don't take it as a problem. Even though it's actually a problem when we speak and wrong. But by speaking, by doing, by saying what we want to say, so eee... the fear must be disappear. As long as there is effort.

When you want to speak, do you make concept or directly speak?

Yes, directly without thinking. But basically for.. what is it.. for the familiar material such as daily life, maybe we can speak directly without thinking. When there are new concepts we just found, and it needs a deep understanding, maybe we need to write it down.

Okay, your own strategy to cope with anxiety in speaking?

Yah.. My strategy, yah just speak directly, and be brave. That is all.

Ohh... Thank you.

Participant 13

What do you feel when you were pointed to be a moderator in this class presentation? Your heart beat fast or tremble, or maybe relaxed as usual?

I just feel so so when I was pointed to be a moderator in this presentation, but actually I feel more challenged to improve my skill, even sometimes I got stuck and my head got freezing when I want to speak, but I always have way to say what I want to say.

Do your palms feel cold?

Not.

Heart beat fast?

Not

Sweaty?

Yes, but just because of the class condition is hot.

Participant 14

How do you feel when you want to present your presentation in this class? Maybe afraid, tremble, or maybe just so so?

My feeling when I presented my group presentation in this class, actually I have study this material deeply, but when I got in front of class I felt all material that I have learnt before fade away or forgot. I also still got difficult in answering the questions from the audience in English.

Participant 15

Why do you never ask question or give comment in class discussion?

Actually I want to ask question or give comment in the discussion, but my friends have asked the similar question with what I want to ask to the presenter. But I usually did not understand if the presenters are less active or the material they presented is not clear. But if the presenters have answered the questions, I have understood.

If you speak in another class, do you feel anxious? Maybe such as your palms are cold, or hard breathing

Yes. Sometimes my palms are cold and I speak faster.

Participant 16

Why do you never ask question or give comment in class discussion? Maybe you don't like the subject or you feel afraid of the lecturer.

Because I did not focus if the presenter is not active, especially if the way they presented their material is not clear. So I will understand more if my friend ask about it the presenter answer it.

Participant 17

Why do you never ask question or give comment in class discussion?

Because I felt less-confident and afraid of making mistake or my question I asked is not suitable with the material we discussed.

Participant 18

Why do you never ask question or give comment in class discussion? Maybe the material is not interesting or maybe you feel afraid to ask.

My reason why I did not ask question or give comment in discussion is because I am afraid if my pronunciation or grammar is wrong. Sometimes I want to ask question but I worry if my question is not understood by the presenters. But my main reason I afraid of when I want to ask question is afraid of making mistake.

Do you feel anxious when you want to speak? maybe your palms become cold or sweaty?

Yes. My palms feel cold always.

Participant 19

Why do you never ask question or give comment in class discussion?

Because I feel there is something missing in myself. I mean there is something weakness in myself. For me, if there is already my friend asking question, I feel I have been represented.

Participant 20

Why do you never ask question or give comment in class discussion? maybe you aren't interesting in the material or doubt to ask.

Actually I really like the material but why I never ask question is because there is no question I can ask or comment. Because at the time the material was clear and from my friends' questions make the material clearer.

Don't you feel your palms cold when you want to ask question?

Yes, always.

Sweaty?

No, just cold.

Appendix 11: Tabel Gejala Fisik Kecemasan (Lembar observasi)

No.	Nama Partisipan	Gejala	Ya	Tidak
1.		Berkeringat/gerah		
		Wajah memerah		
		Gerakan kaki		
		Suara bergetar		
		Sulit mengatakan sesuatu

Appendix 12: Questionnaire dalam Bahasa Indonesia

Nama :

NIM :

Kelompok :

No.Hp :

No.	Pernyataan	Ya	Tidak
1.	Saya akan merasa lebih percaya diri berbicara di kelas jika kita banyak latihan		
2.	Saya akan merasa kurang khawatir berbicara di depan kelas jika saya mengenal teman-teman saya dengan baik.		
3.	Saya merasa sangat rileks di kelas ketika saya sudah belajar di malam sebelumnya.		
4.	Saya kurang cemas di dalam kelas saat bukan hanya saya seorang diri yang menjawab pertanyaan.		
5.	Saya rasa saya bisa berbicara bahasa Inggris dengan sangat baik, tetapi saat saya tahu bahwa saya dinilai, pikiran saya kacau.		
6.	Saya akan lebih ingin memberikan jawaban di kelas jika saja saya tidak terlalu takut untuk mengatakan sesuatu yang salah.		
7.	Saya menikmati pembelajaran yang dilakukan berpasang-pasangan.		
8.	Saya lebih nyaman di kelas ketika saya tidak harus berbicara di depan kelas.		
9.	Saya lebih ingin berbicara di kelas tanpa dikoreksi.		
10.	Saya lebih ingin berbicara di kelas ketika kita mendiskusikan hal yang baru-baru terjadi.		
11.	Saya tidak akan merasa terlalu terganggu jika kita tidak harus menguasai banyak materi dalam waktu yang singkat.		
12.	Saya menikmati pembelajaran seperti melakukan lakon pendek dan lucu.		
13.	Saya akan merasa lebih baik saat berbicara jika kelasnya lebih kecil.		
14.	Saya merasa lebih nyaman di kelas saat saya datang ke kelas dengan persiapan.		
15.	Saya lebih ingin berbicara di kelas ketika kita memiliki giliran untuk berbicara		
16.	Saya kurang cemas di dalam kelas saat bukan hanya saya seorang diri yang menjawab pertanyaan.		
17.	Saya suka kelas dimana kita akan bermain peran.		
18.	Saya tidak akan terlalu cemas berbicara di kelas jika semuanya mengerti bahwa setiap orang membuat kesalahan, dan jika membuat		

	kesalahan bukanlah masalah yang besar.		
19.	Saya lebih memilih memberikan jawaban sendiri dari pada ditunjuk.		
20.	Saya lebih ingin berpartisipasi di kelas jika topik yang didiskusikan menarik.		
21.	Saya tidak akan terlalu gugup dalam ujian lisan bahasa Inggris jika saya latihan lebih banyak di kelas.		
22.	Saya menikmati kelas dimana saya bisa bekerja sama dengan teman.		
23.	Saya akan merasa tidak nyaman jika dosen tidak pernah mengoreksi kesalahan kita di kelas.		
24.	Saya merasa khawatir saat teman kelas saya meminta kesalahan saya dikoreksi.		
25.	Saya tidak pernah merasa yakin pada diri saya ketika saya berbicara di kelas bahasa Inggris.		
26.	Saya gemetar saat saya tahu nama saya akan dipanggil di pelajaran bahasa Inggris.		
27.	Saya selalu berpikir bahwa teman saya yang lain lebih pintar berbahasa Inggris dibandingkan saya.		
28.	Saya tidak khawatir melakukan kesalahan di pelajaran bahasa Inggris.		
29.	Saya selalu tenang selama ujian pelajaran bahasa Inggris.		
30.	Saya malu untuk memberikan jawaban secara suka rela di pelajaran bahasa Inggris saya.		
31.	Walaupun saya sudah mempersiapkan dengan baik untuk pelajaran bahasa Inggris saya, saya tetap merasa cemas.		
32.	Saya bisa merasakan jantung saya berdetak kencang saat saya dipanggil di kelas pelajaran bahasa Inggris.		
33.	Saya takut jika teman saya yang lain akan menertawai saya jika saya berbicara bahasa Inggris.		
34.	Saya merasa lebih tegang di kelas bahasa Inggris daripada kelas yang lainnya.		
35.	Saya selalu berpikir bahwa teman saya lebih kompeten di kelas CCU daripada saya.		

Diadaptasi dari Young (1990: 543-544)

Appendix 13: Interview sheet (Bahasa Indonesia)

1. Bagaimana perasaan anda saat anda ingin bertanya atau memerikan komentar di kelas?
2. Apakah anda merasa cemas misalnya takut, khawatir, atau tegang saat anda ingin bertanya atau berbicara di kelas?
3. Apakah anda tahu hal yang mungkin menyebabkan anda merasa cemas?
4. Apakah duduk di bagian depan mengurangi rasa cemas anda?
5. Tentang menyampaikan ide anda, apakah anda membuat konsep sebelum berbicara? Atau anda sudah tahu apa yang anda harus tanyakan atau katakan saat itu?
6. Saat anda akan mengajukan pertanyaan atau komentar, apakah anda memikirkan hal yang mungkin temnan-teman anda pikirkan tentang anda?
7. Bagaimana anda bisa berbicara dengan santai di dalam kelas?
8. Apakah anda sering latihan berbicara di depan kelas? Seberapa sering?
9. Apakah anda memiliki strategi tersendiri untuk mengatasi rasa cemas anda saat berbicara?

Appendix 14: Hasil wawancara (versi Bahasa Indonesia)

Partisipan 1

Bagaimana perasaan ta' waktu mau ki presentasi mata kuliah ini? Deg-degan ki kah atau gemetar? Atau mungkin biasa-biasa ji dirasa?

Yah. Saat saya memoresentasikan hasil kerja kelompok saya atau materi saya, saya merasa deg-degan, namun seiring berjalannya waktu saya merasa nyaman dengan diskusi yang sedang berjalan, karena Alhamdulillah saat presentasi kelompok saya, saya sudah mempersiapkannya dengan matang. Adi saya tidak takut atau merasa kurang siap. Bagi saya, selama materi yang diberikan sudah saya pelajari terlebih dahulu maka saya tidak akan mencemaskan apapun, kecuali kalo saya tidak mempelajarinya sebelumnya.

Mauka tanya, bagaimana perasaan ta' waktu mauki bertanya?

Kalo perasaanku, kak, waktu mau bertanya sebenarnya eee biasa ji kak, nda' bagaimana, nda' dumba'-dumba' ja', apa, nda' ji. Yang jelas menurut saya pertanyaan saya itu ehhh apa, pasti begitu, maksudnya memang sesuatu yang pantas dipertanyakan dan bukan ji suatu pertanyaan yang konyol.

Seringki duduk dimana? Di tengah, di belakang?

Eee... Saya biasanya duduk di.... Di depan jarang, pastinya di tengah ji sama di belakang.

Kenapa tidak duduk di depan?

Pertama, saya tidak terlalu pede duduk di depan karena saya terlalu tinggi.. hehehe pertama.

Oh, okay, right. Trus kalo misalnya mauki bertanya, bikinki konsep kah atau langsung ji directly?

Eee... Nda ji, cuman kalo adami pertanyaan yang timbul di pikiranku, langsung mi kutanyakan.

Terus, pernahki berpikir 'kalao bertanya ka nanti diketawaika kalo salah jawabanku' atau bagaimana?

Nda ji.. Tidak takut ja' diketawai. Hehe

Oh, okay that's right. Kan santai sekali jaki berbicara toh, bagaimana carata bikin santaiki dalam berbicara?

Eee... Caranya sih sebenarnya lebih percaya pada diri sendiri. Pertama, lebih percaya pada diri sendiri. Terus, eee percaya bahwa tindakan yang kita lakukan itu bukan sesuatu yang memalukan. Jadi yah begitulah.

Terus, bagaimana dengan temanta' supaya lebih plong ki gitu untuk bicara?

Ehh, sebaiknya dia membuka dirinya. Pertama membuka dirinya, terus eee apa, memberanikan diri, harus lebih memberanikan diri untuk mengeluarkan eee... Apa yang dia rasakan, apa yg dia pertanyakan. Saya rasa, mereka harus melangkah keluar dari zona nyamannya.

Oke, makasih nah.

Partisipant 2

Bagaimana perasaan ta wkautu mauki presentasekan presenati ta di kelas ini? Takut kah, gemetar, deg-degan atau bagaimana?

Sebenarnya saya sedikit nervous tapi selalu menjadi hal yang menyenangkan berada di diskusi dan berbagi pendapat atau ilmu. Jadi rasa nerves itu berkurang seiring waktu.

Mmm.. Mauka tanyaki, bagaimana perasaan ta' waktu mauki bertanya atau berpendapat di kelas?

Kebanyakan mahasiswa pastinya.... Emm... tergantung seberapa banyak kutahu tahu yang mau ku tanyakan... emm... Eee... intinya, kalo semakin banyak mengertika materinya, semakin relax ka.

Okay... Dimanaki selalu duduk? Di depan, di belakang?

Banyak di tengah-tengah sih, kak

Berpengaruh kah tempat duduk ta sama kecemasan ta dalam berbicara, atau?

Tidak ji, kak... Karena... Tidak ji, kak.

Terus, kalo mauki bicara, bikinki kah konsep atau note taking atau bagaimana?

Eee... biasanya tidak ji kak. Iye, langsung ji.

Terus, kalau misalya bicaraki, biasaki kah piker bilang 'nanti na ejekka temanku' atau sesuatu yang seperti itu

Mmm.... Di... di tingkat-tingkatan awal ji kak mungkin, tapi semakin banyak pengalaman, pemikiran seperti itu hilang.

Ohhh... Sering memang dilatih speaking ta' di kelas?

Iye', kak. Kalau tidak di kelas mungkin biasa di luar seperti organisasi.

Ohh... Aktifki memang di organisasi dih. Terus, strategi kamu sendiri bagaimana caramu bisa rileks dalam berbicara dan mengungkapkan pikiranmu di kelas?

Hmm... Sebenarnya menurutku pengaruh dari diri kita sendiri ji. Walaupun kebanyakan berpikir bahwa itu pengaruh dari luar tapi sebenarnya dari diri kita sendiri ji. Kan kita sendiri ji yang bikin pikiran bilang eee kalo bicaraka ini pasti diketawaika, takut salah, jadi kita sendiri ji. Kenaliki dulu apa masalah ta, karena beda-beda masalahnya tiap orang, misalnya mungkin dia takutki diketawai. Dia memang pemalui. Jadi kenali dulu masalah ta' dan bagaimana cara ta' temukan

cara untuk mengatasi itu karena sebenarnya bukan faktor dari luar tapi kebanyakan dari dalam jiwa.

Okay, itu strategi apa untuk mengatasi kecemasan itu. Okay... Nggak ada strategi lain?
Tidak ada, Kak.

Okay, itu jiwa yang mau ditanyakan. Thank you nah.

Partisipan 3

Bagaimana perasaan kamu waktu ditunjukin jadi moderator di presentasi kelas ini? Takut mungkin atau gemetar, atau mungkin biasa-biasa aja?
Saya merasa gemetar atau gugup saat memulai diskusi tapi seiring dengan berjalannya waktu saya merasa lebih santai dibandingkan di awal-awal.

Dingin tangan kamu'?
Iya', tapi cuma di awal-awal.

Partisipan 4

Bagaimana perasaan kamu waktu mau ditanya di kelas?
Takut, deg-degan dan kadang-kadang dingin tanganku, Kak.

Kalau takut kamu bicara, apa kira-kira yang bikin kamu takut bicara?
Yang nggak pernah berbicara sebelumnya?

Hmm.. Iya.. eee... maksud kamu kalo misalnya kalo mau bicara tapi tiba-tiba takut, apa kira-kira yang bikin kamu cemas?
Lebih ke minder kayaknya.

Minder sama teman-teman?
Iya'.

Karena? Karena grammar mungkin.
Bukan. Pikiran yang selalu berpikir bahwa teman-teman jauh lebih baik.

Ohh... Terus, sukanya di mana duduk? Di daerah depan, belakang, tengah? Atau sembarang aja?
Saya lebih suka sama laki-laki sih.

Tapi di depan?
Nggak. Biasanya laki-laki itu di belakang-belakang.

Kenapa di belakang?
Eee... Karena yah.. nyaman aja di belakang.

Berpengaruh nggak rasa kecemasan berbicara saat duduk kamu di depan dan di belakang?

Tidak ji kak.

Terus, kalo mauki bicara, bikinki kah note taking atau accidentally?

Ya, accidentally.

Terus, mmm... misalnya kalau mauki bicara, berpikir ki kah opininya teman-teman ta', mungkin nanti na ejekki atau bagaimana?

Kadang-kadang, tapi kalo yakin sama jawaban toh, nda pikir panjang.

Ohhh... terus. Kalo berbicara kulihat rileks ji, cuma.... waktu kuliatki kemarin bicara, kayak susah mengungkapkan ini. Apa kira-kira?

Ya, itu karena kosakata yang terbatas.

Mmm.. tapi tetap ji rileks dih?

Iye'.

Bagaimana cara ta' bikin rileks diri ta'?

Eee... Bagaimana caranya, yah tidak ada latihan khusus sih. Karena sudah berapa tahun itu kuliah.

Hmm.. selalu praktis bahasa Inggris dih?

Ya, sama teman-teman.

Okay, terus, menurut kamu sendiri dari pengalamanmu, apa kira-kira strategi-strategi yang bisa digunakan supaya bisaki mengungkapkan pikiran ta dengan baik dan tidak malu-maluki bicara?

Emmm... Pengalaman dih?

Yah... strategi sendiri yang kamu gunakan.

Gampang saja... pertama toh pikirkan dulu poin apa yang mau disampaikan. Setelah itu kita susun kata-kata, kalau misalnya speakingnya dalam bahasa Inggris, kita tentukan memang kata-kata yang mau digunakan. Tapi kalau bahasa Indonesia, hantam saja.

Artinya bikinki dulu konspe sebelum bicara?

Yah, tapi tidak ditulis. Hanya diingat.

Oke, makasih buat waktunya nah.

Partisipan 5

Bagaimana perasaan ta' waktu mau presentase? Misalnya deg-degan, gemetar atau sebagainya, atau releks ji?

Perasaanku di awal-awal sebenarnya nervous ka tapi seiring berjalannya waktu, saya merasa lebih baik dan menikmati diskusinya. Jadi ada dua atau tiga pertanyaan tapi saya yakin saya bisa jawab dan saya bisa.

Partisipan 6

Begini, kemarin kan kuliatki bertanya, jadi kita kujadikan sampel. Jadi mau ka bertanya, bagaimana perasaanta waktu mauki bertanya?

Awalnya toh, kak, emmm... waktu mau bertanya itu, deg-degannya pasti ada. Apa di', deg-degan, bingung juga mau tanya apa karena saya belum mengerti materinya toh, karena penjelasannya juga pemateri yah begitumi seadanya. Terus pas saya abaca bukunya, dan ternyata ada di situ yang apa, antara semacam... yang tentang apa itu kemarin? (bertanya ke temannya) Tentang yang sama culturenya, sama culturenya, terus ada juga yang hambatan-hambatan yang berbeda culturenya tapi yang... jadi bertanya ka tentang yang... Kan ada hambatan yang berbeda culture yang sesame culturenya tidak ada, jadi saya bertanya seperti itu, bertanya mi tentang hambatan yang kalo sama culturenya.

Kan bilangki tadi gemetarki dan dumba'-dumba', apa sebenarnya yang bikinki begitu?

Yang bkin deg-degan itu, pertama, kakak yang bombing itu hari, sama kakak yang... Yang dosennya yang bimbing kita, terus malu juga nanti salah-salah bertanya, nanti salah-salah bahasa Inggrisnya, salah-salah structurenya, dan seperti itulah. Malu, takut nanti pertanyaannya, pertanyaan yang asal-asalan ji, takut diketawai sama orang.

Sekarang gemetar tidak?

Yah, karena saya baru sampai, gara-gara saya kira terlambat.

Okay, terus, sukaki duduk dimana? Di depan, belakang, tengah?

Tengah-tengah.

Kenapa?

Di tengah-tengah itu tidak terlalu... apa di', biasanya tidak terlalu mencolok oleh dosen begitu, jadi di tengah-tengah.

Jadi kalo bertanyaki di tengah, di belakang, berpengaruh tidak posisi tempat duduk sama kecemasan ta' dalam bertanya?

Tidak, ji kak. Tidak berpengaruh ji.

Okay, sebelumki berbicara, bikinki kah konsep dulu atau directly speaking?

Awalnya bikin konsep dulu, terus, biasa juga keluar dari konsep karena bicara itu biasa lepas semua ide tertuang. Biasa mendadak ada ide.

Pernahki kah berpikir 'nanti na ketawaika temanku', bagaimana caramu hadapi perasaan seperti itu?

Eee... Pernah sih berpikir kalo akan diketawai, cuman... cuman untuk mengatasi itu yah pede saja, sok, sok, sok, menampakkan tidak deg-degan padahal deg-deganbn sebenarnya.

Terus, memang sering ji bertanya di kelas?
Alhamdulillah sering

Itu mungkin satu... salah satunya cara untuk mengurangi nerves di'. Terus, kita sendiri bagaimana strategy mengatasi rasa nervous itu?

Mengatasi rasa nerves itu ya... bagaimana di', ya, yakan sudah, kan sudah belajar sebelumnya menguasai materinya, terus karena sudah merasa menguasai materinya, saya juga merasa bertanggung jawab untuk menyampaikan pendapatku. Walaupun bagaimana pendapatnya nanti, ya itu urusan di belakang. Pokoknya harus keluarkan dulu, keluarkan semua. Walaupun ujung-ujungnya mereka ketawa atau bagaimana, saya juga menganggap teman-temanku sebagai teman-temanku ji toh, bukan orang lain. Mereka sudah tahu saya, kekurangan saya.

Strategi lain, nda ada?
Nda'.

Makasih nah...

Partisipan 7

Bagaimana saat mauki presentase? Gemetar kah atau takut? Atau santai ji?

Jauh-jauh hari saya merasa gugup, mungkin karena kurang persiapan. Jadi saya belajar dengan segenap hati, tapi rasa gugup itu tidak hilang. Saya rasa mungkin karena takut salah saat presentase. Saat awal presentase saya merasa sangat gugup tapi saat mulai berbicara, rasa gugup itu mulai hilang. Jadi rasa gugup saya hanya di awal presentase. Setelah terbiasa alhamdulillah tidak lagi.

Dingin tangan ta'?
Tidak.. Tidak dingin ji, kak.

Partisipan 8

Bagaimana perasaan ta' saat mauki presentasi? Deg-degan kah atau takut?

Saya meerasa sangat deg-degan karena kenapa, saya merasa kurang, tapi ketika saya sudah di atas selama beberapa menit, rasa deg-deganki sudah hilang.

Dingin kita rasa tangan ta'?
Iye', kak di awal-awal. Tapi lama-lama tidak dingin mi.

Partisipan 9

Mau ka Tanya, bagaimana perasaan ta' waktu mau bertanya?

Berpikir ka dulu saya kak karena takut ki toh pertanyaannya nanti salah.

Dumba'-dumba' kah?
Sedikit.

Kalau mauki bertanya bikinki konsep?

Iya.

Tulisan?

Nda', yang mau ji di anu, iyalah bikin.

Sukaki duduk dimaba? Di tengah, di belakang?

Di tengah.

Berpengaruh tidak tempat duduk ta sama kedumbaan ta?

Berpengaruh

Kalo di depanki, lebih dumba' ki dih?

Iye'.

Terus Emm... Pernahki berpikir 'nanti naketawaka temanku'?

Iye'.

Bagaimana caramu hilangkan itu?

Emm... Apa dih, kak... Bertanya saja apa yang mau dtanyakan, daripada apa yang mau kita tau kayak terpendam ji misalnya.

Ohhh bertanya saja dih. Kalo di pelajaran lain seringii memang bertanya?

Tidak ji kak, jarang.

Mungkin ada teman ta' yang mau bertaya tapi agak takut i, apa strategi yang bisa diusulkan untuk mereka?

Anuji mereka kak, kayak menyampaikan-menyampaikan ji. Rata-rata begitu ji kalo ada mau na kasi keluar, bilang saja yang mau.

Terus strategimu sendiri untuk tidak takutki bicara, misalnya latihanki terus bicara kah atau misalnya 'bicara ma' deh, nanti nda dapaka nilai'.

Hehe tidak ji, kak. Begitu ji kalo ada yang mau kutanyakan, daripada nanti menyesal kalo selesaimi mata kuliahnya.

Okay, itu ji yang mau kutanyakan, dek.

Partisipan 10

Baik, mauka tanya, bagaimana perasaan ta kalo mauki bertanya atau mengungkapkan pendapat?

Nervous, takut kalau salah-salah, takut kalau ada teman yang ketawai kalau salah.

Kenapa?

Karena salah itu bukan lagi suatu hal yang tabuh, kalo salah otomatis jadi bahan tertawaan. So, yah kalo mau anu, jadilah orang yang sempurna. Kan ditau mi nda' ada manusia yang sempurna.

Terus, eee... Kalo di kelas sukaki duduk dimana? Di belakang, di depan, di tengahkah?

Eee... Terkadang kalo saya mau cari perhatian saya duduk di depan, tapi kalo saya lagi nda mood, saya duduk di belakang.

Berpegaruh tidak posisi tempat didimu dalam kecemasan dan kenervesanmu dalam berbicara?

Yah

Apa pengaruhnya?

Kalo di belakang mungkin agak.. agak-agak tidak terlalu ji, beda kalo di depan menjadi bahan tontonan.

Terus kalo misalnya mau bertanya, bikin kosep atau directly speaking saja?

Biasa bikin konsep tapi di kepalaji. Beda dengan orang-orang yang mungkin menulis dulu, karena tingkat kecemasannya lebih tinggi dari saya.

Kalau kulihat, rilex ji ki saja bertanya, atau mungkin nampaknya ji?

Ya, di dalam. Tapi tidak terlalu ji mungkin, karena mungkin sudah kebiasaan di kelas. Beda lagi mungkin kasusnya bertemu dengan orang yang lebih besar, orang yang lebih banyak, dan orang.. orang yang banyak itu adalah orang yang asing.

Terus, seringki praktek bhasa inggris kah? Sama siapa?

Sama yang tadi, ehh sama Sxxxxx

Ohh sama teman.. Sering memang bertanya?

Yes, ofcourse.

Untuk dirimu sendiri, bagaimana strategimu supaya bisa becara dengan baik atau mengungkapkan pkran dengan baik tanpa nervous?

Ya pertama, itu tadi, make yourself comfort. Kaya saya dulu presentase, saya tidak mulai dengan hal yang berat, akan tetapi saya buka dengan candaan, umpama. Supaya ketika... ketika orang lain tertawa, yah paling tidak biar menentawai diri saya, pastinya tidak canggung, sudah tidak tegang, nah baru saya buka dengan materi yang berat.

Masih ada strategy lain, untuk teman-temanmu mungkin yang masih malu-malu bertanya?

Percaya diri, self comfort, eee self confidence. Percaya saja, 'ahh, I'm gonna get in', saya pasti bisa.

Ada yang lain?

Yah percaya sama diri kamu. Yakinkan dirimu bahwa ada satu hal yang kamu bisa, yang kamu beda dengan orang lain.

Terus untuk menghilangkan perasaan kayak 'aihh janganmi deh, kalo bicara ka nanti na ketawaika orang'. Untuk menghilangkan hal seperti itu bagaimana strategimu?

Aaa... Biasanya kalo begitu saya paksakan diri, meskipun tidak mau, yang jelas, mau diapa, kalo misalnya di kelas, bosan, tidak mauka bicara, apa yang bisa saya dapat kalo diam di kelas, duduk diam. Oke, oke, kalo untuk nilai, saya harus bicara. Jadi saya paksa bicara.

Partisipan 11

Begini, kak, kan kemarin waktu presentasi, bicaraki juga, jadi mauka bertanya kalo mauki mengajukan pertanyaan kah atau memberi komentar? Biasa-biasaji? Kalo saya pribadi, masih gerogi iya.

Kenapa kira-kira grogiki?

Pertama, karena bahasa Inggris, grammarku. Kedua, karena begitumi, menjadi perhatian karena saya mahasiswa reguler.

Kuperhatikan juga kayaknya selaluki duduk di bagian belakang. Berpengaruh kah ke-nervousan ta' dalam berbicara?

Tidak, sebenarnya saya suka duduk di belakang dari dulu.

Hmmm.. jadi tidak berpengaruh ji dih.

Yah, duduk di depan atau di belakang sama saja.

Emm... Terus, waktu mauki bertanya, bikinki konsep atau langsungji?

Yah, bikin konsep semacam note taking, permasalahan yang mereka diskusikan.

Pernahki kah berpikir kayak 'kalau bicara ka, nanti na piker negative ka temanku'?

Ya, pernah, pernah. Kadang-kadang saya merasa seperti itu. Takut ka kalau teman-teman bilangka orang sok, tapi kalau diskusinya tambah rumit, baru saya bicara.

Bagaimana cara ta' santai berbicara di kelas? Atau tidak ada ji strategi ta'?

Ketahui betul-betul apa yang mau disampaikan.

Ohh begitu... Aktifki ikut organisasi?

Ya

Selaluki bicara di depan umum?

Ya.

Emm... yah, kebanyakan orang kan takut berbicara, jadi adakah strategi ta' supaya tidak cemas ki berbicara?

Pertama, perhatikan presentasinya dan buat note taking supaya gampang kalo mauki bertanya atau berkomentar, kemudian, hindari tatapan mata yang berlebihan. Bukan berarti tidak focus ki sama pendengar. Tetap harus dilihat matanya tapi

jangan terlalu. Jangan terlalu banyak bergerak selama menyampaikan pendapat supaya bisa ki focus sama bicara ta.

Oke, itu ji , kak. Thank you.

Partisipan 12

Bagaiimana perasaan ta' waktu mauki mengungkapkan pendapat ta' di forum?

Yah, terima kasih atas pertanyaannya. Jadi menurut saya saat kita berpendapat di depan kelas atau pada saat pembelajaran dimulai, sebenarnya saya suka sekali karena pada dasarnya saya suka berdiskusi dan memecahkan suatu masalah dan dengan diskusi itu kita mengetahui pendapat orang lain yg berbeda dari kita.

Nda ada kah perasaan kayak 'takutka nanti deh, anu deh, gemetarka nanti', nda ada kah perasaan seperti itu?

Pasti ada sih, ketika berbicara di sepan orang karena eee ketidak biasanya berbcara di depan orang, pasti, apanamanya, nervous dan sebagainya. Tapi, eee itu tergantung pribadi masing-masing. Jika dia mampu untuk apa... me... mereduksi atau mengurangi rasa nerves yang dialami, sebenarnya ketika berbicara di depan public hal yang biasa ketika dia mencobanya.

Terus, kallau di kelas, sukaki duduk dimana? Di depan, belakang, tengah atau sembarang ji?

Sebenarnya saya eee... Di tempat manapun itu sama saja, mau di depan, di tengah atau di belakang, yang penting tegantung sikon. Ketika dosennya mungkin suaranya agak kecil, kita lebih baik duduk di depan, atau mungkin kalo di belakang kita lebih leluasa atau lebih mudah untuk apa... Beradaptasi di dalam kelas.

Tidak berpengaruh ji kecemasan ta' dalam berbicara di tempat duduk ta'? di belakangki lebih tegang kah atau.

Ya. Berpengaruh..

Apa pengaruhnya?

Ya, pengaruhnya mungkin dari sudut pandang dosen yang melihat kita ketika sedang berbicara, tapi tidak semuanya. Nah ketika diperhatikan , kita berpikir bahwa apa yg kita katakana itu harus benar, karena ketika kita salah maka orang lain akan menertawai kita. Pada umumnya orang yang berbicara di depan umum seperti itu.

Jadi kalo pikiran tu muncul, apakah itu akan berpengaruh pada 'aih, jangan ma ka bicara deh, nanti na ketawaika.

Yah, pasti berpengaruh. Iya.

Jadi, bagaimana cara ta' tanggapi hal seperti itu?

Ya, sebenarnya eee saya untuk me... me... apa menanggulangi masalah yang seperti itu berpikir bahwa 'ahh pasti saya diketawai sama orang ketika saya salah',

saya tidak menjadikan itu sebagai sebuah masalah, walaupun pada dasarnya itu masalah ketika kita berbicara dan kita salah. Tapi lewat berbicara, lewat kita melakukan, lewat mengeluarkan hal yang ingin kita katakan, maka eee apa rasa takut tu pasti akan hilang. Yang penting ada usaha.

Terus, kalau mauki berbicara, bikinki kah dulu konsep atau directly speak?

Ya, directly, without thinking. Tapi, pada dasarnya untuk... untuk... apa... sesuatu yang familiar atau pembahasan yang mungkin biasa atau sudah masuk dalam rana kehidupan sehari-hari mungkin directly without thinking. Ketika ada konsep-konsep yang baru kitatemukan dan itu memerlukan pemahaman yang mendalam, kita harus bikin konsep.

Strategy tersendiri misalnya dalam mengatasi kecemasanmu berbicara apa?

Ya, strategi saya, yah cuma berbicara langsung, berbicara dan memberanikan diri. Yah, itu saja.

Ohhh.. Thank you...

Partisipan 13

Bagaimana perasaan ta' waktu ditunjukki sebagai moderator? Deg-degan kah atau gemetar, atau mungkin santai ji?

Begitu-begitu ji, kak, waktu saya ditunjuk sebagai moderator di presentasi itu, tapi sebenarnya saya merasa lebih tertantang untuk meningkatkan kemampuan saya. Walaupun kadang-kadang saya stuck dan blank waktu saya mau bicara, tapi selalu ada cara lain untuk mengatakan apa yang mau saya katakan.

Dingin tangan ta'?

Tidak.

Deg-degan?

Tidak.

Gerah?

Iya, tapi karena ruangnya yang panas.

Partisipan 14

Bagaimana perasaan ta' waktu presentase? Mungkin takut, gemetar, atau mungkin biasa-biasa ji?

Perasaan saya ketika mempresentasikan presentase kelompok saya di kelas, awalnya saya sudah sangat menguasai materi namun ketika berada di depan kelas, rasanya materi yang sudah saya pelajari sebelumnya seperti hilang. Saya juga masih kesulitan dalam menjawab pertanyaan para audience menggunakan bahasa Inggris.

Partisipan 15

Kenapa tidak pernah ki' bertanya atau berkomentar di diskusi kelas?

Sebenarnya saya ingin bertanya atau berkomentar saat diskusi, tapi temna-teman yang telah bertanya hamper sama apa yang sebenarnya saya mau katakana sama pemateri. Tapi saya biasanya kurang mengerti jika presenternya agak kurang aktif atau materinya kurang jelas disampaikan. Tapi kalau sesi pertanyaan atau sudah dijawab pertanyaannya, saya sudah paham.

Partisipan 16

Knapa tidak pernahki bertanya atau kasi komentar saat diskusi? Tidak disuka ki mata kuliahnya atau takutki sama dosennya mungkin.

Karena kadang tidak focus ka, kak, kalau pematerinya kurang aktif apalagi kalau caranya menyampaikan materi kurang jelas. Jadi biasanya setelah adapi teman yang lain yang bertanya, paham ma' juga kalau sudah dijelaskan jawabannya.

Partisipan 17

Kenapa tidak pernahki bertanya kalau diskusi?

Karena saya kutang percaya diri dan takut melakukan kesalahan atau pertanyaan yang saya ajukan tidak sesuai dengan materi yang didiskusikan.

Partisipan 18

Kenapa tidak pernahki bertanya atau berkomentar saat diskusi? Mungkin tidak menarik materinya atau takut-takut ki bertanya.

Alasan saya mengapa saya tidak bertanya ataupun memberi komentar saat diskusi karena saya takut dengan pronunciation ataupun grammar saya salah. Terkadang saya ingin bertanya tapi khawatir apa yang saya tanyakan tidak dapat dimengerti oleh pemateri. Tapi alasan utama yang paling saya khawatirkan ketika ingin bertanya yaitu takut salah.

Merasa cemaski kah kalau mauki bicara? Mungkin dingin tangan ta atau keringat?

Iye' kak. Selalu dingin tanganku.

Partisipan 19

Kenapa tidak pernahki bertanya atau berkomentar saat diskusi?

Karang saya merasa ada yang kurang dengan diri saya, maksudnya ada yang kurang pada diriku. Bagiku jika telah ada yang bertanya atau berkomentar, saya merasa sudah terwakili.

Partisipan 20

Kenapa tidak pernahki bertanya atau berkomentar saat diskusi? Mungkin tidak terlalu tertarik ki sama materinya atau ragu-ragu ki bertanya.

Sebenarnya saya sangat suka matkulnya tapi kenapa saya tidak pernah bertanya karena tidak ada pertanyaan yang bisa saya tanyakan atau untuk saya komentari karena pada saat itu materinya yang dibawakan sudah jelas dan dari pertanyaan teman-teman lainnya membuat materi tersebut makin jelas.

Kalo mauki' bertanya biasa, dingin tidak tangan ta'?

Iya, selalu.

Keringat i?

Tidak ji, dingin saja.

Appendix 15: Participants' profile

Participant Number	Initial Name	Sex
Participant 1	P N S	Female
Participant 2	R K P	Male
Participant 3	A	Female
Participant 4	M E	Male
Participant 5	N D J	Female
Participant 6	S A	Female
Participant 7	R H	Male
Participant 8	S	Female
Participant 9	P N	Female
Participant 10	M F	Male
Participant 11	M A W	Male
Participant 12	M S H	Male
Participant 13	Z M R	Male
Participant 14	M F	Female
Participant 15	M M	Female
Participant 16	A Q	Female
Participant 17	K	Female
Participant 18	D	Female

BIOGRAPHY

Nurul Muthmainnah was born in Majene, West Sulawesi, on May 10th, 1995. She is the second child of Herling, S.Ag. and Mahdalena, S.Pd.SD. Reading novel, watching movie, making poetry and short story, are her hobbies. She is an introvert person who is not active in class discussion, but she is good at writing. Preferring to be silent in class was not because she did not want to speak, but there are some factors make her feel afraid to do so, even though actually she has so many ideas to be delivered. That case also constituted this thesis about anxiety in delivering ideas was taken as her research.
